MESSAGE

Road Accidents is one of the leading causes of death, disability and hospitalization of people worldwide in general and India in particular. At least one out of 10 people killed on roads across the world is from India, according to the World Health Organization. Hon'ble Prime Minister also expressed his concern about road crashes and the need to increase awareness in his 'Mann ki Baat' more than once and appealed to people to become "active stakeholders" in road safety activities to save lives.

The cost of road accidents is borne not only by the victims and their family, but by the economy as a whole in terms of untimely deaths, injuries, disabilities and loss of potential income. During the year 2020, the total recorded 3,66,138 road accidents caused loss of 1,31,714 persons lives and injured 3,48,279 persons. Unfortunately, the worst affected age group in Road accidents is 18-45 years, which accounts for about 70% of total accidental deaths.

Considering the paramount importance of this issue, it has been the endeavor of our Ministry to take various steps from time to time, to make changes in relevant Acts as needed, to make desirable policy changes, to take up appropriate measure and monitoring towards reaching the goal of road safety for everyone. The Ministry has been implementing the Motor Vehicle (Amendment) Act 2019, the long due amendment was done almost after 30 years to meet the need of the changing transport system and environmental scenario. The Ministry has also been working on identifying Black Spots on National Highways and on short term and long-term rectification of these black spots, through its organisation like NHAI and NHIDCL. Moreover, the Ministry is also working to collect accidents data through Integrated Road Accidents (iRAD)/e-Detailed Accidents Report (e-DAR) projects to provide a real-time causative analysis of road accidents in line with the international practices. These are some of the efforts of the Ministry to strengthen road safety scenario in the country, provide for citizen facilitation, transparency, reduction in corruption, empowerment of States, strengthening public transport, insurance & compensation related reforms and removing intermediaries etc.

Reliable and up-to-date statistics is the basis of every policy/ programme and their effective implementation as well as monitoring and management. To cater to this need, this Ministry has been bringing out this annual publication titled "Road Accidents in India". I hope the data and analysis contained in this Report will be helpful for all stakeholders towards reaching the common goal of road safety for one and all. I congratulate Secretary MoRT&H and his team of officers from Transport Research Wing for bringing out this valuable publication. I also place on record this Ministry's appreciation for the efforts made by the concerned officials of all the States/Union territories towards this. We will be happy to accept suggestions for further improvement of this publication.

MESSAGE

Road safety is an issue of concern for all countries globally, as approximately 1.3 million people die each year as a result of road traffic crashes as per World Health Organisation data. The situation is even more alarming for low- and middle-income countries since 93% of the world's fatalities on the roads occur in those low- and middle-income countries, even though these countries have approximately 60% of the world's vehicles. The issue of road safety becomes even more important for India, having one of the largest road networks in the world. The unprecedented rate of motorization and growing urbanization fueled by high rate of economic growth have compounded the problem.

The Ministry of Road Transport and Highways (MORTH) has always been considering road safety as an issue of paramount importance and has been taking proactive steps to address it. MORTH has recently formulated road safety strategy based on 4-Es, namely Education, Engineering (of both roads and vehicles), Enforcement and Emergency care. The strategy is under implementation; substantial progress has been achieved. Total number of accidents has been on declining trend since last five years.

Our Ministry is committed to reduce road accidents by providing safer infrastructure, safer vehicles and building a robust ecosystem with safety being one of the key components. The Motor Vehicles Act (MVA) 2019, was one of the foremost steps that has initiated this journey and now being supported by various other initiatives such as the Integrated Road Accidents (IRAD) Project under World Bank assistance to provide a systemic solution to problem of accidents in line with international practices, schemes to set up automated vehicles inspection centers and driver training centers, publicity and awareness campaign to ensure road safety at the grassroots level etc. are a few to name.

I hope that the data on different facets of road accidents and analysis contained in this Report will be useful to policy makers in States /UTs as well as for other stakeholders. I would like to extend my gratitude to the Police Departments of all States/U.Ts who have provided data/information in time. I also express my appreciation towards my colleagues in the Transport Research Wing for the continuous efforts in bringing out this publication despite facing various challenges due to the ongoing pandemic.

Gen. (Dr.) V. K. Singh

Foreword

Road safety is both a health and development issue of concern, considering its magnitude and gravity and the consequent negative impacts on the economy, public health and the general welfare of the people, particularly those with low incomes. Although we have undertaken initiatives and are implementing various road safety improvement programmes, the overall situation is still far from satisfactory. With rising motorization and expanding road network, travel risks and traffic exposure grow at a much faster rate, as the growth of registered vehicles always outnumbers population growth and new roads constructed. Today road traffic injuries are one of the leading causes of deaths, disabilities and hospitalizations with severe socioeconomic costs across the world.

As per the 'Road Accidents in India 2020', there were 3,66,138 unfortunate incidences of road accidents during 2020 which claimed 1,31,714 lives and caused injuries to 3,48,279 persons. However, owing to continuous efforts of this Ministry and various other related organizations as well as stakeholders, who have been working together towards the common goal of road safety, the total number of road accidents has been on declining trend since 2016 except for a marginal increase registered in 2018. Similarly, the total number of injuries due to road accidents has also been declining since 2016.

The number of road accidents in 2020 has been decreased by 18.46% on an average compared to the previous year i.e 2019. Similarly, the number of persons killed and the number of injuries during 2020 has also been decreased by 12.84% and 22.84% respectively. The long stretch of lockdown imposed by the Government during the pandemic might also be a factor contributing towards the sharp reduction in these indicators. Moreover, the total number of fatalities and number of fatal road accidents has also declined in 2020 for the second consecutive year. Maintaining this trend would, however, require continued thrust on the proactive approach towards road safety by taking along all stakeholders.

The purpose of this publication is to present an in depth analysis and overview of the road accidents in India. The data and analysis on road accidents contained in this volume will help create awareness, formulate suitable policy, take effective measures and also assist in informed decision making in the area of road safety. Success of road safety initiatives requires active cooperation and participation of all the stakeholders.

I hope the data on road accidents and the basic analysis contained in this report will be useful in analysis of road safety issues leading to appropriate policy interventions to achieve reduction in road accidents and resultant fatalities. I also hope this document would be useful to administrators, policy makers, civil society organizations as well as researchers and other stakeholders involved in the area of road safety.

Acknowledgement

The Ministry of Road Transport and Highways has been regularly compiling and disseminating information on various facets of road accidents in the country through its annual publication titled 'Road Accidents in India', based on data received from the Police Departments of all the States/U.Ts and Million Plus Cities in India. The relevance of reliable and up-to-date statistics on Road accidents is extremely important to take up relevant timely measures and also for formulation of proper policy to tackle this very crucial issue, as the road accident continue to be a leading cause of death, disabilities and hospitalization in the country despite our commitment and efforts to bring down road accidents causalities. India tops the world in road crash deaths and injuries.

The present issue 'Road Accidents in India 2020' contains data up to December 2020. This report is a joint endeavor of officers/staff of Transport Research Wing (TRW) and the Police Departments of all States/U.Ts, each contributing with best of their efforts and commitment. I wish to record my deep appreciation for the outstanding support and cooperation provided by all States/Union territories. I am especially thankful to the Police Departments of all States/U.Ts who have provided data/information as per prescribed format to TRW in time.

The overall leadership and supervision of the Secretary, Ministry of Road Transport has been the guiding force in bringing out this publication, which has been especially challenging during the crucial time of ongoing COVID-19 pandemic where there were various constraints including restrictions imposed on the mobility across length and breadth of the country.

I would also like to place on record the efforts of Shri Dinesh Kumar, DDG, Shri Anshuman Mohanty, Adviser, Ms. M.T.Sindhu, Joint Director and their team of dedicated officers from TRW in bringing out this publication. Valuable support extended by Shri. Dinesh Kumar Gupta, Deputy Director in compiling data and its critical analysis is duly acknowledged.

PREFACE

The Transport Research Wing (TRW) of the Ministry of Road Transport & Highways is entrusted with the responsibility of bringing out the annual publication 'Road Accidents in India'. The publication presents information on various aspects of road accidents in the country during the calendar year. The information is collected from the Police Departments of all the States/U.Ts and Million Plus Cities in India through specific designated nodal officers (DGP/ADGP) Crime, ADGP (Traffic) and the Director (State Crime Record Bureau) in a specially designed standardized formats as provided by United Nations' Economic and Social Commission for the Asia and the Pacific (UN-ESCAP) under the Asia Pacific Road Accident Database (APRAD) project. The publication also contains some in-depth analysis in addition to basic data and tables. Performance of Top Ten States in accidents parameters has also been analysed.

The present issue of 'Road Accidents in India, 2020' provides data/information on various facets of road accidents in the country during the calendar year 2020. The document is divided into ten sections, taken together which covers almost all aspects of road accident namely, information relating to road accidents, its fatalities & causes, performance of Million Plus Cities as well as various initiatives taken by the Governments etc.

The Section 1 and 2 of the Report provide a brief profile of road accidents in India during 2020. The Section 3 gives details about the parameters of road accidents and fatalities by category of roads. The Section 4 gives insight about the various causes of road accidents in India in details. The Section 5 profiles road accidents fatalities in India. The Section 6 elaborates on inter-States comparison of accidents parameters. The Section 7 examines the performance of Million Plus Cities (Fifty in number) in respect of road accidents. The Section 8 elaborates on spatial and inter-temporal distribution of road accidents in the country. The Section 9 of the report details the initiatives taken by the Ministry which continues to implement a multi-pronged road safety strategy based on Education, Engineering (both of roads and vehicles), Enforcement and Emergency Care. Finally, the Section 10 provides a note on the methodology for accident data collection followed by TRW. The current document could not include the Section on international comparison of road accidents due to non-availability of data/information.

The Report for the calendar year 2020 reveals that there were 3,66,138 unfortunate incidences of road accidents during 2020 which claimed 1,31,714 lives and caused injuries to 3,48,279 persons. One striking fact observed in the Report is that, there are sharp decline in all the three major parameters of road accidents during the year. The number of road accidents, the number of persons killed and the number of injuries have been decreased compared to previous year by 18.46%, 12.84% and 22.84% respectively.

I hope this document would be useful for policy makers, scholars, academia, civil society organisations and society at large. It is a continuous endeavor to improve the quality of road accidents data. We look forward to any suggestions in improving this document further.

New Delhi

EXECUTIVE SUMMARY

The present volume of 'Road accidents in India — 2020' provides information on various facets of road accidents in the country during the calendar year 2020. It has ten sections and covers information relating to road accidents in the context of road length and vehicular population. Data/information provided in this report is sourced from police departments of States/Union Territories collected on calendar year basis in standardized formats as provided by the United Nations Economic and Social Commission for Asia and the Pacific (UNESCAP) under the Asia Pacific Road Accident Data (APRAD) base project.

2. **Section 1 and 2** of the report provides a brief profile of Road accidents in India during 2020. Selected parameters of road accidents like number of accidents, fatalities, fatal accident etc. along with long-term trend has been examined in this section. A total of 3,66,138 road accidents have been reported by States and Union Territories (UTs) during the calendar year 2020, which claimed 1,31,714 lives and caused 3,48,279 injuries.
3. Road accidents parameters registered significant decline in 2020 compared to 2019. Total accidents decreased on an average by 18.46 percent, the number persons killed decreased by 12.84 percent and the number injures decreased by 22.84

percent over previous year's average. Total number of road accidents has been on decline since 2016 except for a marginal increase of 0.46 percent in 2018. For the second consecutive year, the total number of road accidents fatalities has declined in 2020. Similarly, the number of persons injured has been on the decline since 2015.

4. There has also been a decline in the number of fatal accidents, i.e., accident involving at least one death. A total of 1,20,806 fatal accidents were reported in 2020, which is 12.23 per cent lower than the 2019 figure of 1,37,689. Road accident severity measured by the number of persons killed per 100 accidents, however, saw an increase of 2.3 percentage points during 2020.
5. **Section 3** profiled parameters of road accidents and fatalities by category of roads. During 2020, out of the total 3,66,138 road accidents reported in the country, 1,16,496 (31.8%) accidents took place on the National Highways (NH) including Expressways, 90,755 (24.8%) on State Highways (SH) and 1,58,887 (43.4%) on Other Roads. In respect of fatal accidents, out of total 1,20,806 fatal accidents, 43,412 (35.9%) accidents reported on National Highways, 30,171 (25.0%) on State Highways and 47,223 (39.1%) on Other Roads. During 2020, however, National Highways, State Highways and Other Roads reported less

- number of accidents, fatalities and injuries as compared to previous year.
6. Top 10 States selected based on number of accident and fatalities reported on National Highways during 2020 have also been analysed in this Section. On State front, Tamil Nadu recorded highest number of road accidents on National Highways in 2020, but the number of persons killed in road accident has been highest in Uttar Pradesh.
 7. The Supreme Court Committee had desired jurisdiction-wise details to be covered in respect of accidents and fatalities on National Highways. Accordingly, additional information had been called from States in three additional formats and examined in detail in this Section.
 8. **Section 4** provide details on the causes of Road accidents in India. Road accidents are multi-causal and are often the result of interplay of various factors like (i) human error, (ii) road environment and (iii) vehicular condition. In 2020, under the category of Traffic Rule Violations, over speeding is a major killer, accounting for 69.3 % of the persons killed followed by driving on the wrong side (5.6%).
 9. In respect of type of neighbourhood's categories, more than 47.4 percent of accidents, 53.7 percent of death and 48.3 percent of injury occurred in open area, i.e., locations which normally do not have any human activities in the vicinity. Under road feature category, 65 per cent of accidents took place on straight roads, whereas accidents on curved roads, pothole roads and steep grade together accounted for only 15.2 per cent of the total road accidents in 2020. Data for 2020 shows more than 72 percent of accidents and 67 percent of fatalities took place under sunny/clear weather.
 10. **Section 5**, profiled road accidents fatalities in India. Total number of persons killed in road accidents during 2020 has been less than that of 2019 by 12.6 per cent. For the third consecutive year in 2020, the fatal road accident victims largely constitute young people in the productive age groups. Young adults in the age group of 18 - 45 years accounted for 69 per cent of victims during 2020. People in working age group of 18 – 60 years share 87.4 per cent of total road accident fatalities.
 11. Among vehicle categories involved in road accidents, two-wheelers accounted for the highest share in total accidents and fatalities during 2020. Light vehicles comprising cars, jeeps and taxis together comes at distant second. In terms of road-user categories, the share of two-wheeler riders in total fatality has been the highest (43.5%) during 2020 followed by the Pedestrian road-users with 17.8 per cent of persons killed in road accidents.
 12. **Section 6**, elaborates on inter - States

comparison of accidents parameters. State wise distribution of number of accidents, fatalities and injuries has been given in this Section. States/UTs recorded less number of accidents and fatalities in 2020 as compared to 2019. Major States that achieved significant reduction in road accidents and fatalities in 2020 are Tamil Nadu, Maharashtra, Uttar Pradesh and Kerala. In respect of number of accidents, Tamil Nadu topped the States, whereas Uttar Pradesh recorded the highest number of accident fatalities during 2020. Performance of selected accidents parameters in respect of Top 10 States during 2020 has been examined in detail in this Section.

13. **Section 7**, examines the performance of Million Plus Cities (Fifty in number). During the year 2020, Million Plus Cities accounted for 16.04 per cent of the total number of accidents and 10.3 per cent of total accidents fatalities in the country. The Trends in Road accidents and fatalities in top 10 Million Plus Cities has been examined in this section.
14. **Section 8**, elaborates on spatial and inter-temporal distribution of road accidents in the country. Both road accidents and accident related killings are more a rural phenomenon than an urban phenomenon. Hence, in 2020, 68 per cent of road accidents death took place in rural area where as urban area accounted for 32 per cent of total accidents death in the country.

15. **Section 9**, of the Report details the initiatives taken by the Ministry which continues to implement a multi-pronged road safety strategy based on Education, Engineering (both of roads and vehicles), Enforcement and Emergency Care.
16. **Section 10**, provides a note on the methodology for accident data collection followed by TRW. This has been done to familiarize the users of the data on the methodology followed by TRW and to convey that the methodology followed is in line with the internationally followed best practices on the subject. Data is collected by TRW from the Police Departments in standardized formats as provided by UNESCAP under the APRAD base project. The detailed formats used for this purpose are provided at **Appendix I** of the Report. The definitions of terms used in the Report are given in **Appendix**.
17. This section also addresses the challenges of accident data collection based only on Police reporting. It spells out the response of the Ministry to this problem by designing the Integrated Road Accidents Database iRAD project aided by World Bank Assistance to provide an 'integrated' and a "systemic" solution to problem of accidents in line with international practice. Basically, the iRAD project will enable capture of road accidents and geotagging of the same through a tablet provided to the first responder which is the

police. The software of the project would provide back end analytics, as well as simultaneous linkage with multiple users (such as Hospitals, ambulance, Blood Banks, Vahan, Sarathi, NHAI, PWD, Courts, Insurance Companies etc.), near real time syncing and updating of data base as well as development of a mobile application for Road accidents.

18. This section also provides a broad framework for accident data collection internationally followed covering EU, US, Australia, New Zealand, Korea, and Sweden to enable us to benchmark the Indian performance.
19. Section on international comparison of road accidents has been removed from this report due to non-availability of data.

Section – 1

ROAD ACCIDENTS IN INDIA

Fatalities and injuries caused by road accidents are becoming the matters of great concern particularly with the recent surge in motorization, due to increasing population and increased vehicular penetration across the length and breadth of the nation. Road traffic injuries are the leading cause of death globally and the principal cause of death in the age group of 15 to 49 years. During the calendar year 2020, road crashes in India claimed about 1.3 lakh lives and caused injuries to more than 3.4 lakh people. However, the country saw a decrease in the number of accidents and fatalities during 2020 compared to previous year 2019, due to many possible factors such as, better traffic management, implementation of the new Motor Vehicle Act and COVID-19

induced lockdown. During the year 2020, total number of road accidents decreased by 18.46 percent on an average the number of injuries decreased by 22.84 percent and the number of persons killed decreased by 12.84 percent simultaneously. Total number of fatalities and number of fatal road accidents have declined in 2020 for the second consecutive year. The number of road accidents has been declining since 2016 except for a marginal increase of 0.46 percent in 2018. The total number of injuries due to road accidents has also been on decline since 2016. Maintaining this trend would, however, be contingent upon carrying forward the current proactive approach towards road safety by all stakeholders.

BROAD PROFILE OF ROAD ACCIDENTS 2020 vis-à-vis 2019

1.1 A total number of 3,66,138 road accidents have been reported by States and Union Territories (UTs) during the calendar year 2020, claiming 1,31,714 lives and causing injuries to 3,48,279 persons. The number of road accidents in 2020 is lower by 18.5 percent on an average compared to previous year, 2019. Similarly, the number of injuries and deaths on account of road accidents declined by 12.8 percent and 22.8 percent respectively (refer to Table 1.1). These figures translate, on an average,

into 1003 accidents and 360 deaths every day or 42 accidents and 15 deaths every hour in the country.

1.2. The State of Tamil Nadu with 45,484 accidents (12.4%) has recorded the highest number of road accidents in 2020, however, the number of persons killed in road accident has been the highest in the State of Uttar Pradesh (19,149 i.e. 14.5%). State wise details are given at Section 6 of this report.

Table 1.1: Major Parameters of Road Accidents- 2020 vis-à-vis 2019

Parameter	2019	2020	% Change
Number of Accidents	4,49,002	3,66,138	-18.5
Number of Persons killed	1,51,113	1,31,714	-12.8
Number of Injury	4,51,361	3,48,279	-22.8
Accident Severity (Persons killed per 100 accidents)	33.7	36.0	

CATEGORY OF ROAD WISE DISTRIBUTION OF ACCIDENTS

1.3. Road accidents by Category of Road is presented in Table 1.2 reveals a total number of 1,37,191 accidents took place on National Highways in 2020, registered a decrease of 15.1 percent relative to the corresponding period last year. Subsequently, the total number of persons killed on NH decreased from 53,872, in 2019 to 47,984 in 2020, recorded a decline in growth by 10.9 percent on an average relative to same period previous year. Less number of accidents and fatalities were reported on State Highways and Other

Roads during 2020 as compared to the same period in 2019 (refer to Table 1.2).

1.4. On the States' front, Tamil Nadu with 15,269 accidents (13.1%) recorded the highest number of accidents on National Highways in 2020 followed by Uttar Pradesh (13,695 and 11.8%). In respect of fatalities, Uttar Pradesh topped the States' with 7859 (16.4%) fatalities followed by Maharashtra (3528 and 7.4%). State wise details on number of accidents and fatalities on National Highways are given at Section 3 of this report.

Table 1.2: Total number of Road Accidents, Persons Killed and Injured by Category of Roads- 2020 vis-à-vis 2019

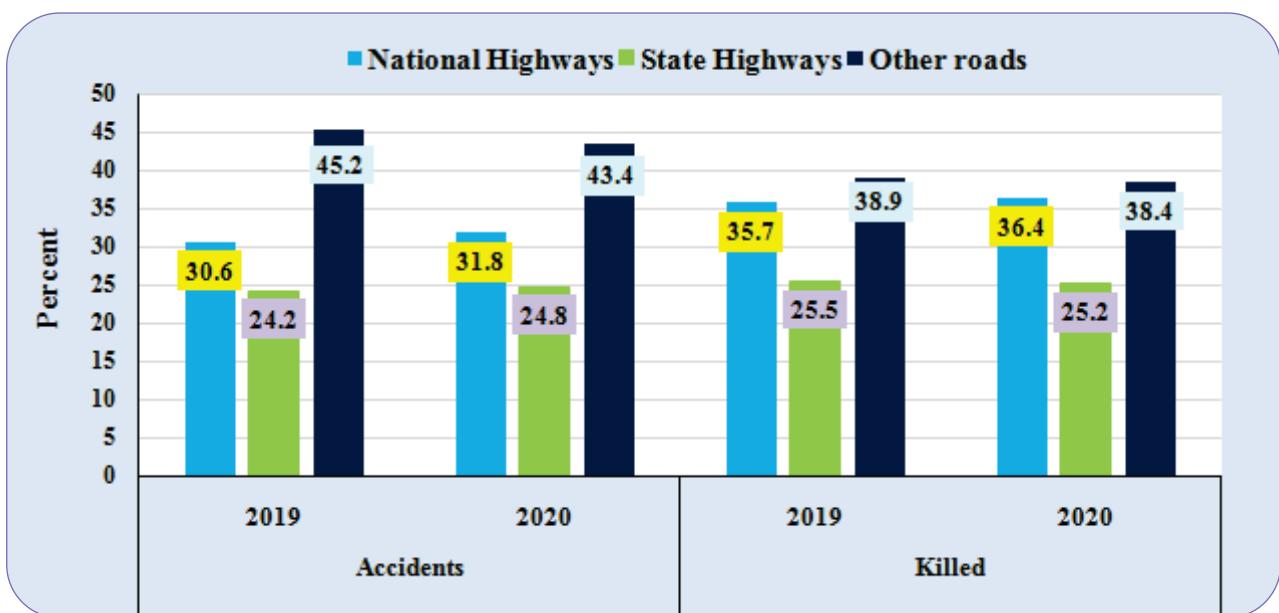

Category of Road	2019		2020		% Change in 2020 over 2019	
	Accidents	Killed	Accidents	Killed	Accidents	Killed
National Highways	1,37,191 (30.6)	53,872 (35.7)	1,16,496 (31.8)	47,984 (36.4)	-15.1	-10.9
State Highways	1,08,976 (24.2)	38,472 (25.5)	90,755 (24.8)	33,148 (25.2)	-16.7	-13.8
Other Roads	2,02,835 (45.2)	58,769 (38.9)	1,58,887 (43.4)	50,582 (38.4)	-21.7	-13.9
All India	4,49,002	1,51,113	3,66,138	1,31,714	-18.5	-12.8

Figures in parentheses are the percentage shares in the total of respective column

1.5. National Highways accounted for 30.6 per cent of total accidents and 35.7 per cent of fatalities in 2019, which increased to 31.8 per cent and 36.4 per cent respectively in 2020 (refer to Chart 1.1). The State Highways constitute 24.8 percent of total accident in 2020 compared to 24.2 percent during the same period in 2019. However, percent contribution of other roads in total

accidents declined to 43.4 percent in 2020 compared to 45.2 percent during the same period last year. National highways with only 2.08 percent of total road network in the country is accounted for 36.4 percent of fatalities during 2020 followed by Other Roads (38.4%) and State Highways (25.2%).

Chart 1.1: Category wise breakup of Accidents and Fatalities (in percent)

1.6. A road accident may cause loss of life/lives or may results in grievous injuries or minor injuries to road-users. An accident which resulted in death of one or more person is defined as a fatal accident. Grievous injury accidents are defined as one in which one or more victims suffer serious injury requiring hospitalization. Minor injury defined as situation do not require hospitalization.

1.7. Category wise breakup of type of accidents and fatalities shown declining trend in 2020 compared to same period in 2019 (Table 1.3). Out of total 3,66,138 accidents

recorded in 2020, 1,20,806 (33%) constitute fatal accidents and 2,24,432 (61.3%) constitute minor or grievous injury accidents. Among injury causing accidents, 96,302(26%) accidents were grievous and 1,28,130(35%) were minor injury accidents. Category wise breakup reveals grievous injury accidents registered the highest decline in growth i.e. 24 percent in 2020 compared to same period in 2019, followed by non-injury accidents (23.6%). Details on type of accidents are given at Section 2 of this report. State-wise details for 2020 may be seen at **Annexure 7**.

Table 1.3: Type of road accidents in 2020 vis-à-vis 209

Type of accidents	2019	2020	% Change in 2020 over 2019
Fatal accident	1,37,689 (30.7)	1,20,806 (33.0)	-12.3
Grievous injury accidents	1,26,759 (28.2)	96,302 (26.3)	-24.0
Minor injury accidents	1,57,215 (35.0)	1,28,130 (35.0)	-18.5
Non-injury accidents	27,339 (6.1)	20,900 (5.7)	-23.6
Total	4,49,002	3,66,138	-18.5

Figures in parentheses are the percentage shares in the total of respective column

1.8. Out of total 3,66,138 road accidents recorded in 2020, 1,20,806, (33%) were fatal accidents (Table 1.4). Category wise breakup of fatal accidents in given in Table 1.4 show less number of fatal accidents were reported in 2020 compared to same period in 2019. State Highways accounted for the highest reduction of fatal accidents by 13.7 percent in 2020 compared to same

period last year followed by the Other Roads (13.3%). More than 35 percent of fatal accidents took place on National Highways during last two years 2019 and 2020, however, NH accounted for around 2.1 percent of total road network in the country is matter of concern and needs attention. Details are given at Section 3 of this report.

Table 1.4: Fatal Accidents by Category of Roads in 2020 vis-à-vis 209

Fatal Accidents	2019	2020	% Change in 2020 over 2019
State Highways	34,958 (25.4)	30,171 (25.0)	-13.7
National Highways	48,291 (35.0)	43,412 (35.1)	-10.1
Other Roads	54,440 (39.5)	47,223 (39.1)	-13.3
All India	1,37,689	1,20,806	-12.3

Figures in parentheses are the percentage shares in the total of respective column

1.9. Road accidents are multi-causal and are the result of an interplay of various factors. These can broadly be categorized into those relating to (i) human error, (ii) road

condition/environment and (iii) vehicular condition. Detailed analysis on causes of road accidents are given at Section 4 of this report.

1.10. Table 1.5 summarises the accidents caused by types of collision. "Head on Collision" accounted for the largest share of 20.1 percent of the total accidents in 2020, followed by hit from back (19.9%)

and Hit and Run (14.3%) respectively. The indicators of type of collision marked decrease in 2020 compared to 2019 (Table 1.5 refers to).

Table 1.5: Road Accidents by type of Collision- 2020 vis-à-vis 2019

Type of Collision	2019	2020	% Change in 2020 over 2019
Hit and Run	69,621 (15.5)	52,448 (14.3)	-24.7
With parked Vehicle	13,317 (3.0)	11,096 (3.03)	-16.7
Hit from Back	89,923 (20.0)	73,039 (19.9)	-18.8
Hit from side	57,987 (12.9)	48,010 (13.1)	-17.2
Run off Road	19,055 (4.2)	18,210 (5.0)	-4.4
Fixed object	14,507 (3.2)	12,882 (3.5)	-11.2
Vehicle overturn	23,314 (5.2)	19,211 (5.2)	-17.6
Head on collision	87,452 (19.5)	73,743 (20.1)	-15.7
Others*	73,826 (16.4)	57,499 (15.7)	-22.1
Total	4,49,002	3,66,138	-18.5

Figures in parentheses are the percentage shares in the total of respective column

*Other unspecified collision types.

1.11. Accidents and fatalities classified by type of imparting vehicles (crime vehicles) fell down in 2020 compared to same period in 2019 except for bicycles. Vehicles' category wise break up reveals two-wheelers accounted for the highest share in total accidents and fatalities with 43.7 percent and 43.2 percent respectively in 2020 (Table

1.6). Corresponding figure was at 37.2 percent and 37.1 respectively for same period in 2019. Buses accounted for highest decline in number of accidents and fatality in 2020. Pedestrian road-users accounted for 17.8 per cent of persons killed in road accidents during 2020.

Table 1.6: Number of Accidents and Persons Killed Classified by the type of Impacting Vehicles (Crime Vehicle)

Crime vehicles	2019		2020		% Change in 2020 over 2019	
	Accidents	Killed	Accidents	Killed	Accidents	Killed
Pedestrian	59,929 (13.3)	25,858 (17.1)	57,763 (15.8)	23,477 (17.8)	-3.6	-9.2
Bicycles	9,400 (2.1)	4,196 (2.8)	9,661 (2.6)	4,276 (3.2)	2.8	1.9
Two-wheelers*	167,184 (37.2)	56,136 (37.1)	158,964 (43.7)	56,873 (43.2)	-4.9	1.3
Auto-Rickshaws	25,714 (5.7)	6,655 (4.4)	17,475 (4.8)	5,034 (3.8)	-32.0	-24.4

Trucks/Lorries	37,078 (8.3)	13,532 (9.0)	26,130 (7.1)	9,913 (7.5)	-29.5	-26.7
Buses	22,887 (5.1)	6,529 (4.3)	9,739 (2.7)	3,040 (2.3)	-57.4	-53.4
Other Motor Vehicles (including e-rickshaw)	6,799 (1.5)	3,065 (2.0)	4,891 (1.3)	2,359 (1.8)	-28.1	-23.0
Others (Animals drawn vehicle, cycle rickshaws, hand carts, & other persons)	27,815 (6.2)	11,242 (7.4)	20,529 (5.6)	8,869 (6.7)	-26.2	-21.1
Total	449,002	151,113	366,138	131,714	-18.5	-12.8

Figures in parentheses are the percentage shares in the total of respective columns

* Two wheelers include motor cycles, scooters, mopeds & scooty

REGISTERED MOTOR VEHICLES

1.12 Sustained economic growth and increased per capita income have led to rapid growth of motorized vehicles in India. There were 296 million registered vehicles in India as on 31st March 2019 (Table 1.7 refers to). The total number of registered motor vehicles in the country grew at a Compound Annual Growth Rate (CAGR) of 9.9 per cent between 2009 and 2019. Among different category of vehicles, highest CAGR of 10.4 per cent and 9.6 percent were recorded respectively by two-wheelers and cars,

jeeps and taxis. Goods vehicles and buses recorded CAGR of 8.9 per cent and 3.4 per cent, respectively. Composition of vehicular population in 2019 shows the highest share of two-wheelers (74.8%) followed by cars, jeeps and taxis (13. %), other vehicles (6.8%), goods vehicle (4.7%) and buses (0.7%).

1.13 Vehicular composition and pattern of category-wise growth rates have revealed the preference of road-users for personalized means of transport (cars and two-wheelers) over the public road

transport. The increase in personalized means of transport and decline in share of public transport have significant implications on traffic congestion and safety.

1.14 Vehicle density expressed in number of ROAD NETWORK

1.15. Road network in India, of about 63.71 lakh km in March 2019, is one of the largest in the world. The country's road network consists of National Highways, State Highways, Districts roads, Rural and Village Roads. Over the years, there has been consistent improvement in road network across the country through the construction of new roads and upgradation of the existing roads.

1.16. India's road density at 1890.75 per 1000 sq.km of area in 2017-18 was higher than that of many developed countries though surfaced/paved road constituting 64.6

vehicles per kilometer of road length has increased from 28 vehicles in 2010 to 46 in 2020. This is indicative of the growing road traffic congestion in the country (for lack of a more appropriate data, i.e., vehicles on roads).

per cent of the total road length is comparatively lower than that of developed countries. National Highways constitute 2.1 per cent of the total road length of the country in 2019. The balance road networks comprise State Highways (2.9%), District Roads (9.9%), Rural Roads (71%), Urban Roads (8.5%) and Project Roads (5.6%).

1.17. An overview of road accidents, registered vehicles and road length from 1970 is presented at Table 1.7 (a & b) below. Details are at **Annexure 1**.

Table 1.7(a): Decadal tends of Road Accidents, Registered Vehicles and Road Length in India (1970-2020)

Year	Road Accidents ('000)	Road Accident Deaths ('000)	Road Accident Injuries ('000)	Registered Vehicles ('000)	Road Length (000 km)	Fatality rate (no. of accident deaths per 10,000 vehicles)	Vehicle density (no. of vehicles per km of road)
1970	114	15	70	1,401	1,189	103.5	1.2

ROAD SAFETY AND ACCIDENT REMEDIAL MEASURES

1.18 The number of road accidents and injuries have declined in 2020 for the second consecutive year. This declining trend is reinforced in 2020 by the lesser number of persons killed in road accidents over the previous year. Statistics of 2020 seems to suggest plateauing of India's road accident and fatality curves. Maintaining this trend would, however, be contingent upon carrying forward the current proactive approach towards road safety by all stakeholders.

1.19 The Ministry of Road Transport & Highways has formulated road safety strategy based on 4-Es, namely Education, Engineering (of both roads and vehicles), Enforcement and Emergency care. The strategy is under implementation and substantial progress has been achieved. Details regarding road safety initiatives and road accident remedial measures implemented by the Ministry of Road transport and highways are given at **Section 9** of this report.

Section - 2

ROAD ACCIDENTS – PROFILE AND TRENDS

2.1. Road transport emerged as the dominant segment in India's transport sector, both in terms of freight and passengers. India's road transport sector is large and diverse; it caters to the needs of about 1.3 billion people. India has the second largest road network in the world of about 63.71 lakh kilometers after the United States with 66.46 lakh kilometers. Exposure to adverse traffic environment is high in India because of the unprecedented rate of motorization and growing urbanization fueled by high rate of economic growth. As a result, incident of road accidents, traffic injuries and fatalities have remained high in India. Hence, road accidents and fatalities are matters of topmost priority over the years.

2.2. For the second consecutive year, the number of road accidents and accident related fatalities have declined in 2020 and number of injuries declined for the fifth consecutive year. This declining trend is reinforced in 2020 by the lesser number of accidents, fatalities and injuries in road

accidents over the previous year. Besides a small aberration in the trend in 2018 accidents, fatalities and injury curves have moved downward as shown in Chart 2.1. Maintaining this trend would, however, require continued thrust on the proactive approach of the growth towards road safety by taking into account of all stakeholders.

2.3. Road accidents being the result of interplay of multiple factors, multi-prong measures are needed to reduce the number of accidents and fatalities. The Ministry of Road Transport and Highways has formulated road safety strategy based on 4-Es, namely Education, Engineering (of both roads and vehicles), Enforcement and Emergency care. The strategy is under implementation and substantial progress has been achieved. Details regarding road safety initiatives and road accident remedial measures implemented by the Ministry are given at Section 9 of this report.

TRENDS OF ROAD ACCIDENTS

2.4. The number of road accidents has been on decline since 2016 except for a marginal increase of 0.46 percent in 2018 (refer to Chart 2.1). Total number of road accident decreased by 18.46 per cent on an average to reach 3,66,138 in 2020 compared to 4,49,002 in 2019. The total number of

fatalities declined from 1,51,113 in 2019 to 1,31,714 in 2020, recorded a drop in YoY growth of 12.84 percent during same period last year. Total number of injuries due to road accidents fell by 22.84 percent decreasing from 4,51,361 in 2019 to 3,48,279 in 2020.

Table 2.1: Trends in number of Road Accidents, Persons Killed and Injured: 2015-2020

Year	Total Number of Road Accidents	% change over previous year	Total Number of Persons Killed	% change over previous year	Total Number of Persons Injured	% change over previous year
2015	5,01,423		1,46,133		5,00,279	
2016	4,80,652	-4.14	1,50,785	3.18	4,94,624	-1.13
2017	4,64,910	-3.28	1,47,913	-1.90	4,70,975	-4.78
2018	4,67,044	0.46	1,51,417	2.37	4,69,418	-0.33
2019	4,49,002	-3.86	1,51,113	-0.20	4,51,361	-3.85
2020	3,66,138	-18.46	1,31,714	-12.84	3,48,279	-22.84

Chart 2.1: Trend in number of Accidents, Persons Killed and Injured: 2015 to2020

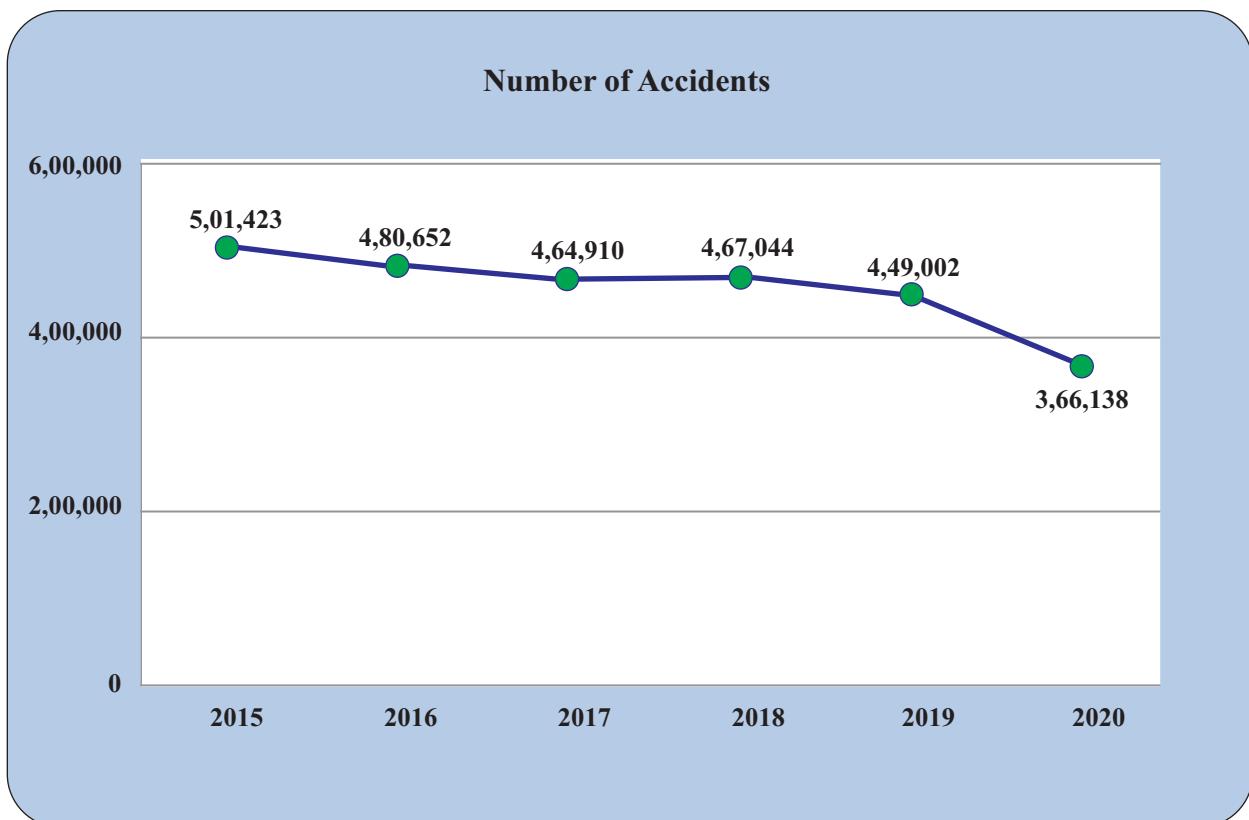

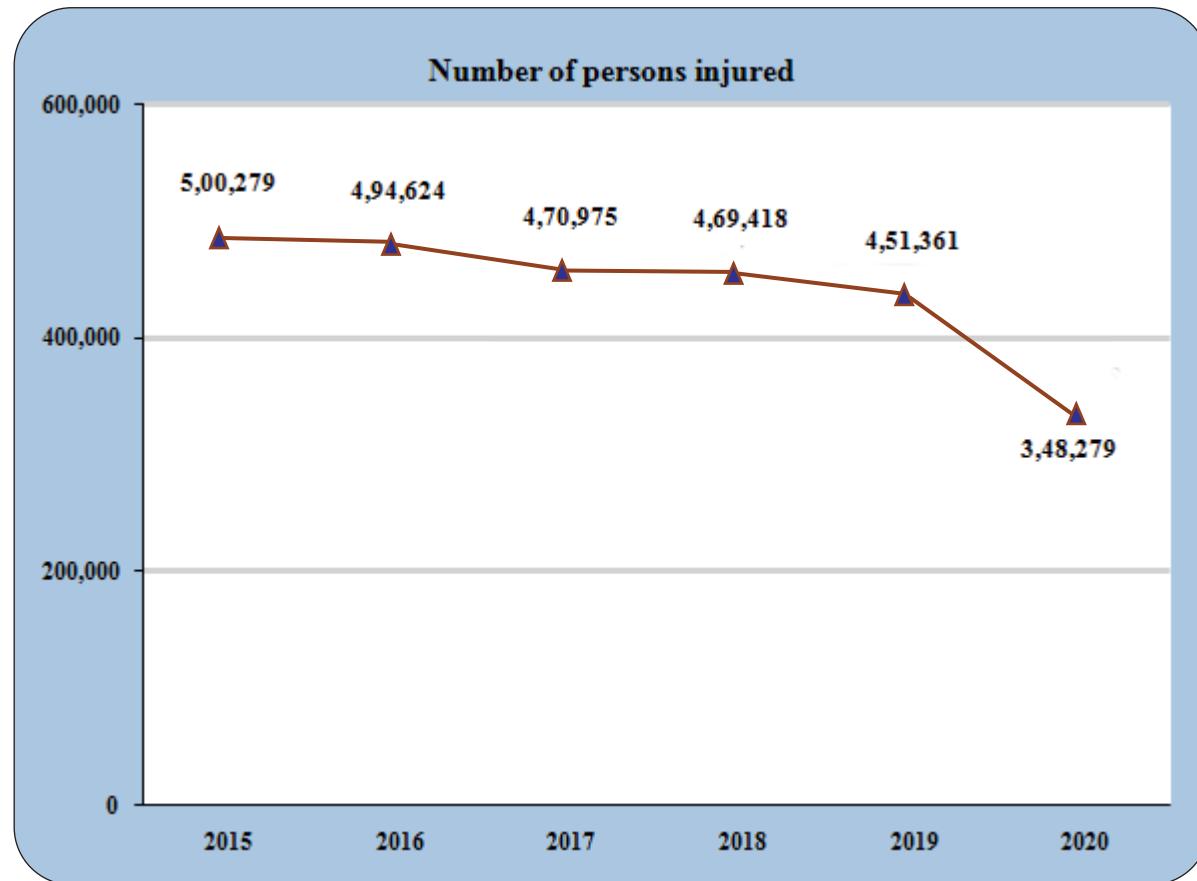

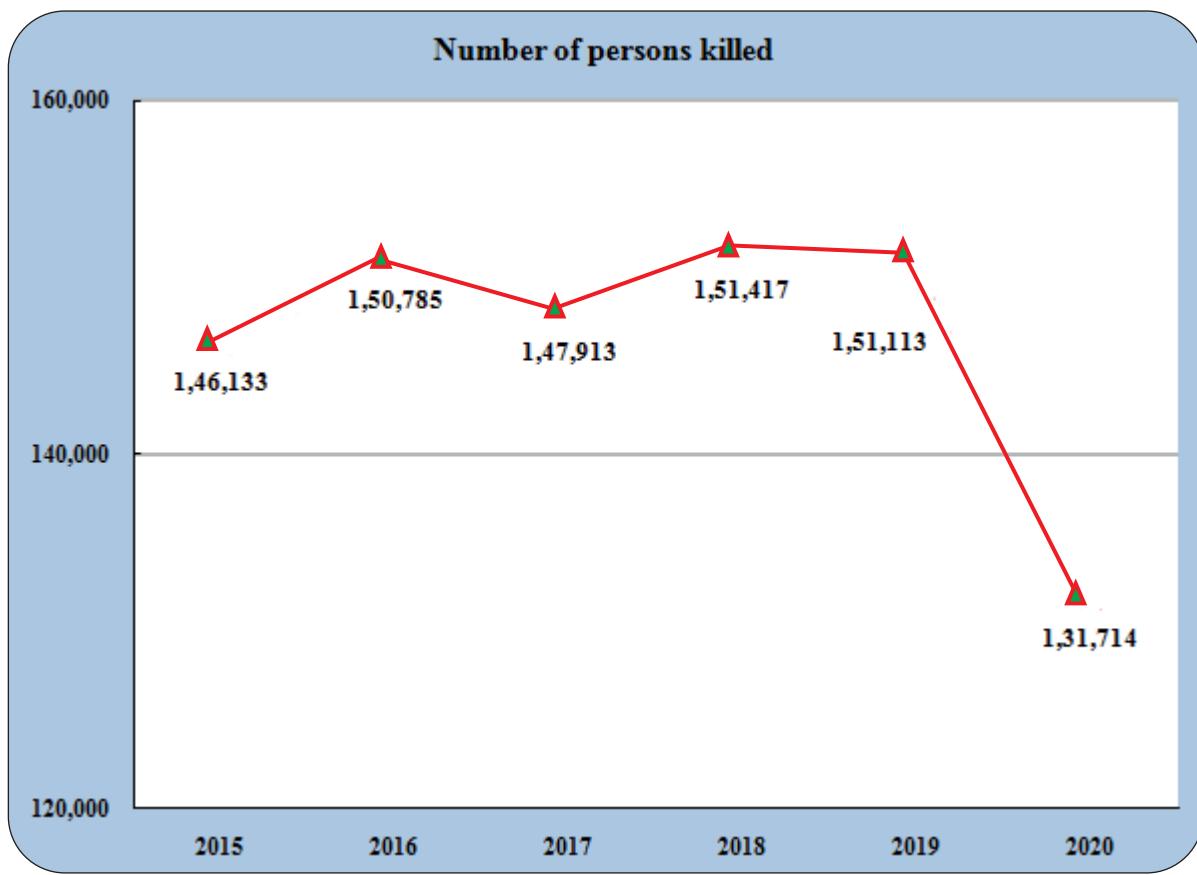

Chart 2.1 Contd...

2.5. Proactive approach towards road safety by Ministry and all stakeholders contributed to reduce road causality over the years. Besides this, the implementation of the Motor Vehicle Amendment Act 2019, which became effective from 1st September, 2019 contributed to reduce road accidents. The MVA Act 2019 included, inter-alia, provisions like stiff hike in penalties for traffic violations, electronic monitoring of the same, enhanced penalties for juvenile driving etc. and the implementation of the same has enabled achieving the desired impact.

2.6. Spread of Covid-19 pandemic and resultant restriction imposed on

mobility particularly during lock down significantly reduced total number of road accidents and fatalities in the country.

2.7. An accident, which results in death of one or more person, is a fatal accident. For the second consecutive year in 2020, total number of fatal accident has been on decline. Total number of fatal road accidents declined from 1,37,726 in 2018 to 1,20,806 in 2020, registered a decrease of 12.26 percent compared to corresponding period last year (Chart 2.2). Trend in YoY growth has been on decline since 2017 except for an increase registered in 2018 (2.17%).

Chart 2.2: Trends in the Number of Fatal Accidents : 2016-2020

PROFILE OF ROAD ACCIDENTS- 2020

2.8. During 2020, a total of 3,66,138 accidents were reported by all States/UTs, of which, 1,20,806 (33%) were fatal accidents. The

number of persons killed in road accidents were 1,31,714 and caused injury to 3,48,279 persons (Table.2.2 refers to).

However, the year 2020 witnessed a significant decline in the growth of the key parameters of road accidents (Chart 2.1). Total number of Road Accidents in 2020 compared to the previous year 2019, decreased on average by 18.46 percent, the number of persons killed decreased by 12.84 percent and the number of injuries decreased by 22.84 percent (Table 2.2 refers to).

2.9. The analysis of road accident data 2020

reveals, on average 1003 accidents and 360 deaths take place every day on Indian roads which further translates into 42 accidents and loss of 15 lives every hour in our country. Highways with around 5 percent of total road network in the country accounted for more than 56 percent of total accidents and more than 61 percent of fatalities need attention (refer Chart 2.3). Details of accidents, fatalities and injuries by category of roads are given at Section 3 of this report.

Table 2.2: Major Parameters of Road Accidents- 2020 vis-à-vis 2019

Parameter	2019	2020	% Change
Number of Accidents	4,49,002	3,66,138	-18.5
Number of Persons killed	1,51,113	1,31,714	-12.8
Number of Injury	4,51,361	3,48,279	-22.8
Accident Severity (Persons killed per 100 accidents)	33.7	36.0	

Table 2.3: Total number of Road Accidents, Persons Killed and Injured by category of Roads during 2020

Category of Road	Accidents	Killed	Injured	Road Length as on 31.03.2019
National Highways	1,16,496	47,984	1,09,898	1,32,500
% share in Total	31.82	36.43	31.55	2.1
State Highways	90,755	33,148	88,208	1,86,528
% share in Total	24.8	25.2	25.3	2.9
Other roads	1,58,887	50,582	1,50,173	60,67,269
% share in Total	43.4	38.4	43.1	95.0
All Roads	3,66,138	1,31,714	3,48,279	63,86,297

TYPE OF ROAD ACCIDENTS IN 2020

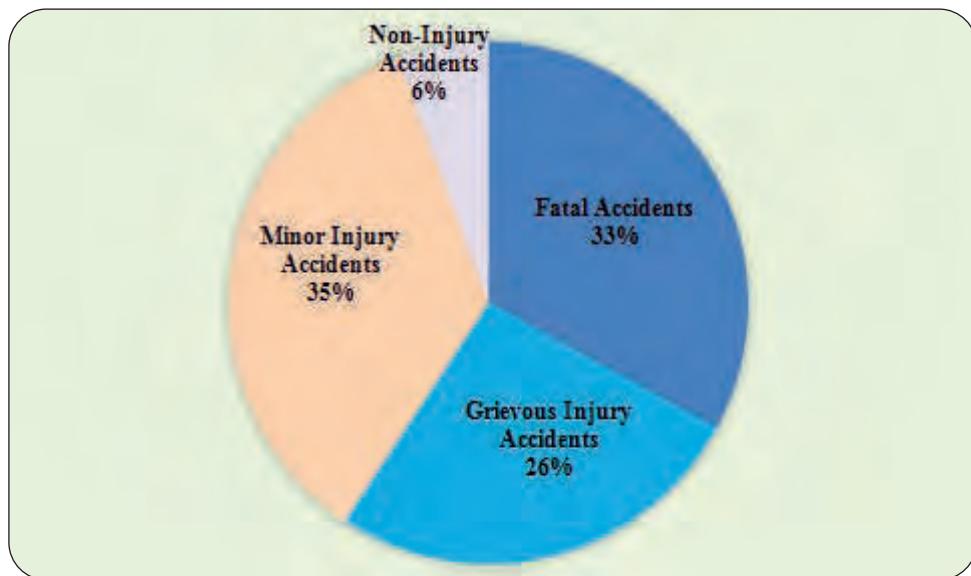

- 2.10. A road accident may cause loss of life/lives or grievous injury or minor injury or non-injury to road-users. An accident which resulted in death of one or more person is a fatal accident. Grievous injury accident is one in which one or more victims suffer serious injury requiring hospitalization (not necessarily in terms of IPC definition of grievous injury). Minor injury accident is when victim(s) does not require hospitalization.
- 2.11. During 2020, a total of 3,66,138 accidents were recorded, of which 1,20,806 (33%) were fatal accidents, 2,24,432 (61.3%) were injury (minor and

grievous) causing accidents. Among injury causing accidents, 96,302(26%) were grievous and 1,28,130(35%) were minor injury causing accidents (Chart 2.3 refer to). As compared to the previous year, there are absolute decline in the number of fatal accidents, minor accidents and non-injury accidents in 2020 (refer table 2.4). In table 2.4, percentage share of fatal and grievous injury have shown upward trend whereas other two categories, minor injury and non-injury accidents have shown declining trend during 20015-2020. State-wise details for 2020 can be seen at **Annexure 7**.

Table 2.4: Type of Road Accidents during 2015 to 2020

Type of road accident	Parameter	2015	2016	2017	2018	2019	2020
Fatal Accident	Number	1,31,726	1,36,071	1,34,796	1,37,726	1,37,689	1,20,806

	% Change	2.5	-4.1	-3.3	0.5	-3.9	-18.5

Chart 2.3: Type of Road Accidents in 2020

NATURE OF ROAD ACCIDENTS IN 2020

2.12. Nature of accident or collision types at aggregate national level data shows decline in 2020 as compared to 2019. Nationwide lockdown and subsequent restriction imposed on movement contributed to reduction in road accidents and accident fatalities. “Head on Collision” which accounted for the largest share of 19.2 percent of the total persons killed in 2020, which registered a decrease of 5.5 percent on an average relative to same period last year (refer Table 2.5). Head-on collisions are known to occur on roads with narrow lanes, sharp curves, unseparated lanes for two-way traffic and also busy stretches. Normally, the roads with the greatest risk of head-on collision are busy single-carriageway roads outside urban areas where speeds are highest. The greatest risk reduction in terms of head-on

collision comes through the insertion of a median separation

2.13. The other major types of collision which caused death are 'hit & run' (17.6%), and 'hit from back' (17.5%). The Motor Vehicle Amendment Act 2019 provides for enhanced rates of Rs. 2,00,000 on the death of a victim in Hit and Run as against Rs 25,000 earlier. A hit from the back or a rear-end collision occurs when a vehicle crashes into the one in front of it. Common factors contributing to rear-end collisions include driver's lack of attention or distraction, tailgating(back to back) at junctions, panic stops and reduced traction due to wet weather or worn pavement.

2.14. Other categories like “Run” off the Road could happen due to loss of control by the driver due to excessive or

inappropriate speed, distraction, misjudging a curve, attempting to avoid collision with another road user or an animal.

2.15. The category which registered the maximum decrease in terms of persons

killed in 2020 was collision with “Hit and Run”, which registered 21.1 percent decline compared to same period last year followed by Hit from back with 17.2 percent decline in the growth (refer Table 2.5).

Table 2.5: Road Accidents by type of collision- 2020 vis-à-vis 2019

Type of Collision	2019			2020			% change in 2020 over 2019		
	Accidents	Killed	Injured	Accidents	Killed	Injured	Accidents	Killed	Injured

LONG TERM TRENDS

2.16 Despite some fluctuations, there has been a declining trend in the number of road accidents and the number of persons injured since 2010 (refer Table 2.6 and Chart 2.5). The Fatality number which showed consistent increase since 2005 has recorded a decline in 2020 (refer table 2.6). Rate of growth despite some

fluctuation showed clear decline from 2018 onwards (refer table 2.7(b)). A very important indicator to monitor road accidents is the extent of road accident severity (road accident deaths per 100 accidents), which rose to 36 in 2020 from 33.7 in 2019, need attention.

Table 2.6: Long term trends in major Parameters of Road Accidents

Year	Number of accidents		Number of persons		Severity*
	Total	Fatal	Killed	Injured	
2005	4,39,255	83,491 (19.0)	94,968	4,65,282	21.6
2006	4,60,920	93,917 (20.4)	1,05,749	4,96,481	22.9
2007	4,79,216	1,01,161 (21.1)	1,14,444	5,13,340	23.9
2008	4,84,704	1,06,591 (22.0)	1,19,860	5,23,193	24.7
2009	4,86,384	1,10,993 (22.8)	1,25,660	5,15,458	25.8
2010	4,99,628	1,19,558 (23.9)	1,34,513	5,27,512	26.9
2011	4,97,686	1,21,618 (24.4)	1,42,485	5,11,394	28.6
2012	4,90,383	1,23,093 (25.1)	1,38,258	5,09,667	28.2
2013	4,86,476	1,22,589(25.2)	1,37,572	4,94,893	28.3
2014	4,89,400	1,25,828(25.7)	1,39,671	4,93,474	28.5
2015	5,01,423	1,31,726(26.3)	1,46,133	5,00,279	29.1
2016	4,80,652	1,36,071 (28.3)	1,50,785	4,94,624	31.4
2017	4,64,910	1,34,796(29.0)	1,47,913	4,70,975	31.8
2018	4,67,044	1,37,726(29.5)	1,51,417	4,69,418	32.4
2019	4,49,002	1,37,689(30.7)	1,51,113	4,51,361	33.7
2020	3,66,138	1,20,806(33.0)	1,31,714	3,48,279	36.0

Figures in the parentheses indicate % share of Fatal accidents in Total Accidents

*Number of persons killed per 100 accidents

Chart 2.4: Decadal Trend in the number of Road Accidents, Deaths and Injuries: 1980-2020

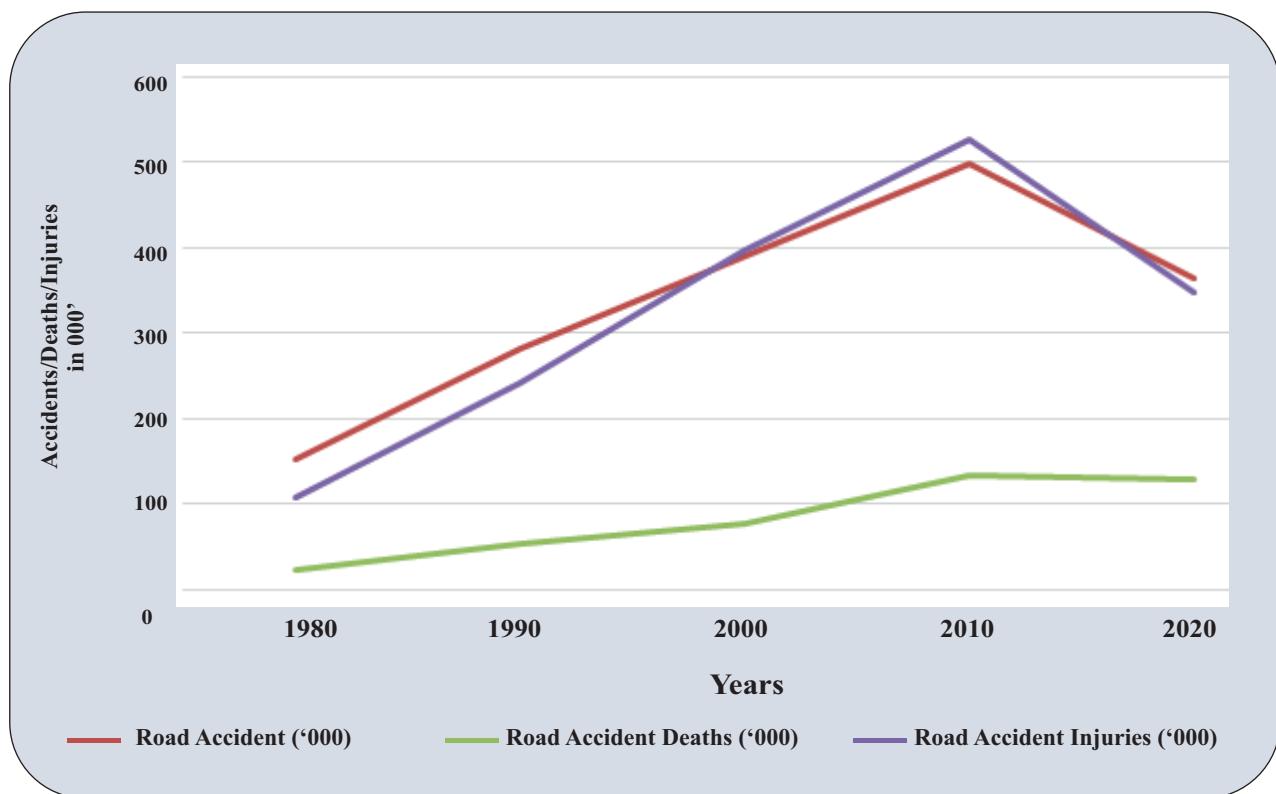

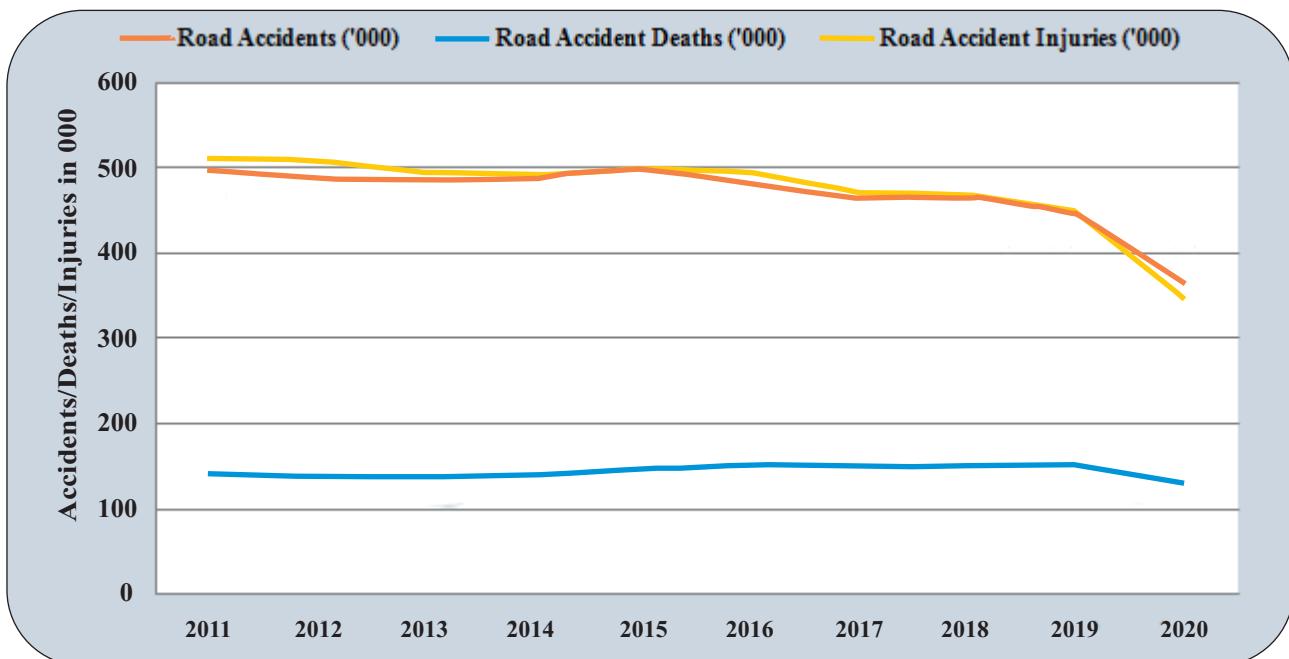

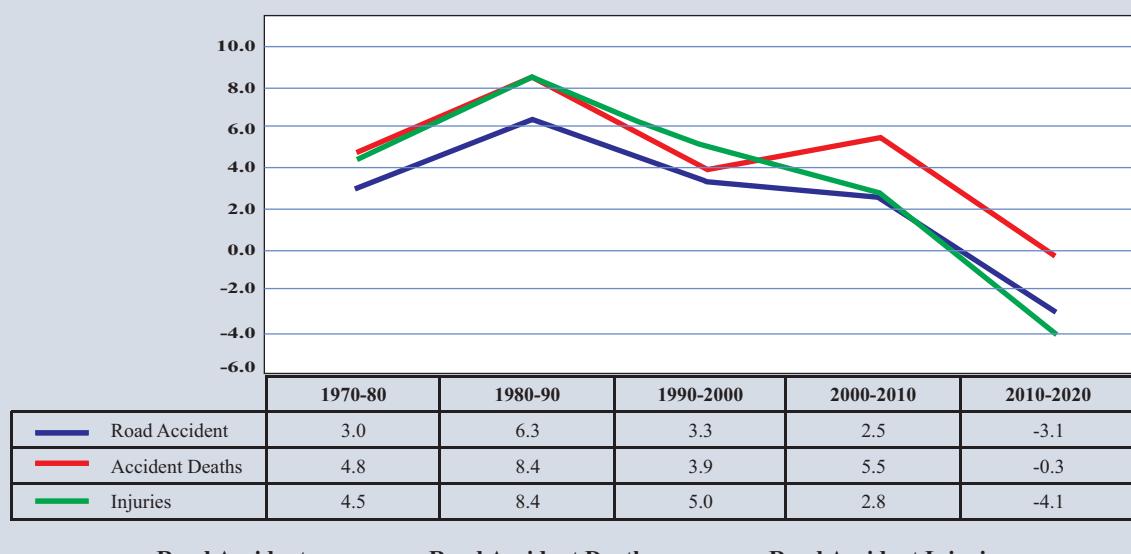

Chart 2.5: Trend in the number of Road Accidents, Deaths and Injuries : 2011-2020

2.17. Decadal Growth Rate shown in the Chart 2.6 reveals road accidents, fatalities and injuries peaked during 1980-1990. Subsequently, the growth rate of all the three indicators have declined over the decades. During the current decade, road

accidents, fatalities and injuries recorded a remarkable decline in growth and turned to negative growth (Chart 2.6). The decade's trend of growth rate suggests that reduction in fatality follows a decline in the incidence of road accidents, but with a lag.

Chart 2.6: Decade's CAGR of Road Accidents, Death and Injuries (1970-2020)

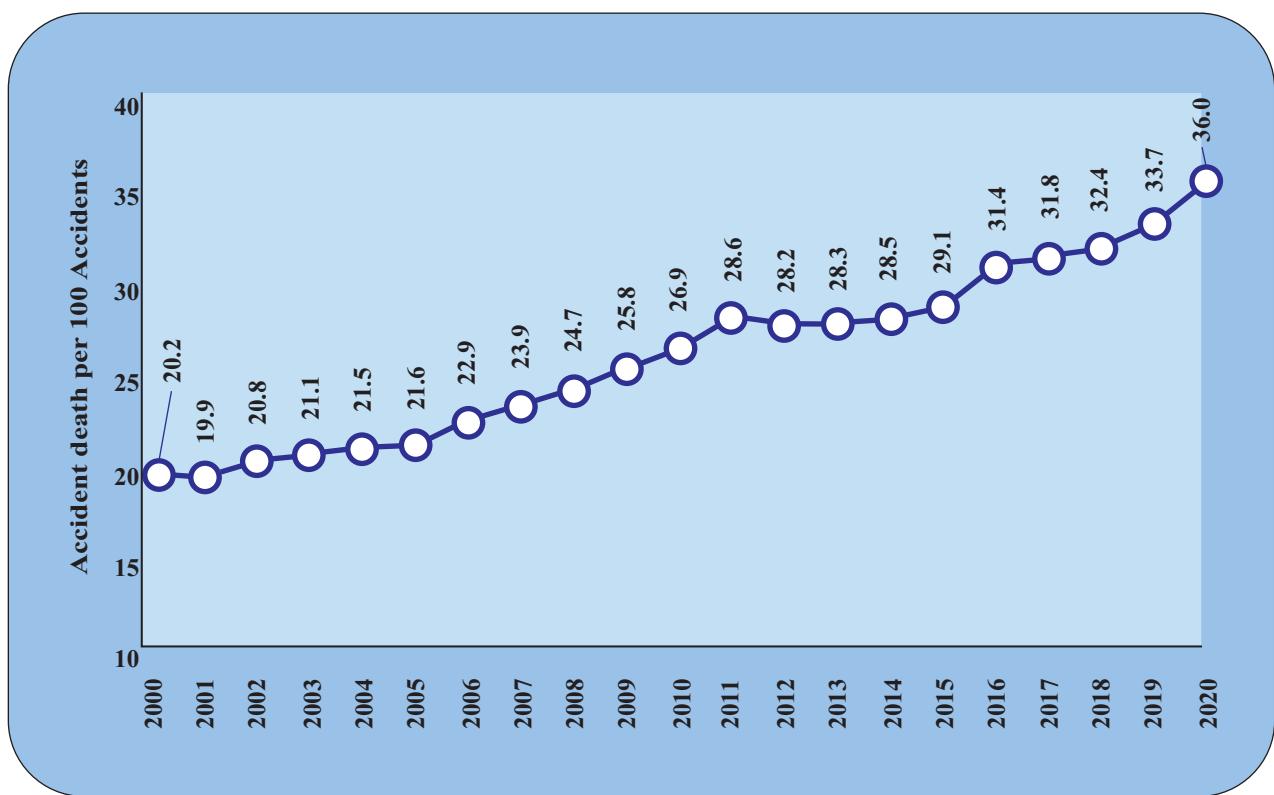

ACCIDENT SEVERITY

2.18. Road accident severity measured by the number of persons killed per 100 accidents increased from 33.7 in 2019 to 36.0 in 2020 (refer Chart 2.7). Long run trend despite some marginal fluctuations has been on increase since 2000. It underscores the need for improved trauma care and traffic calming measures which aimed at

reducing crash impact parameters. Details on accident severity across the States/UTs are shown in Chart 2.8, which reveals that Mizoram (79) recorded highest accident severity followed by Bihar (78) and Punjab (75). Data in the Chart 2.8 shows about 60 percent of States in India has accident severity higher than national average of 36.

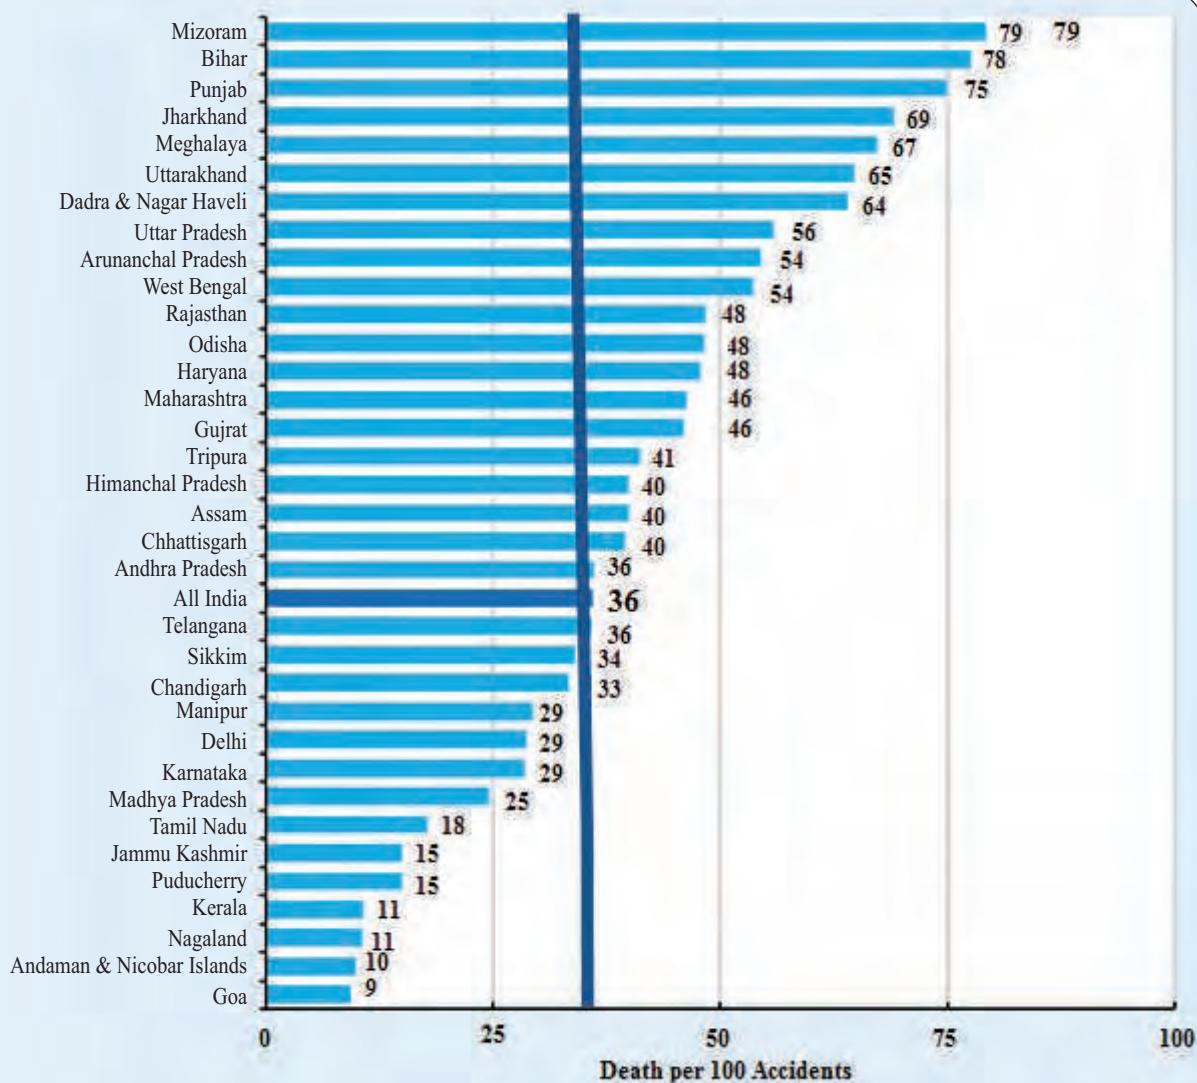

Chart 2.7: Severity of road accidents in India during the period: 2000 to 2020

2.19. The top 10 States that recorded highest number of accidents and fatalities in 2020 were Madhya Pradesh, Karnataka, Kerala, Tamil Nadu and Telangana, however, those states reported accident severity rate lower than all India average

(Chart 2.8). On the other hand, Uttar Pradesh, Maharashtra, Gujarat, Rajasthan and Andhra Pradesh have shown accidents severity rates higher than national average.

Chart 2.8: Accident Severity across the State/UTs during 2020

Analytics of Road Accidents and Deaths, Registered Vehicles and Road Length

2.20. The broad trend beginning from 1970 to 2020 in terms of road accidents, deaths, injuries, registered vehicles, road length

and other derived parameters are indicated in the Tables 2.7(a) and 2.7(b).

Normalized indicators of Road Accidents- Long run Trends

2.21. An analysis has been done normalizing the accidents and accident related deaths over the years by the population

and number of vehicles as given in the Table 2.8.

Table 2.8: Indicators of accidents and accident related deaths over the years normalized by the population and number of vehicles

Years	Population of India (in thousands)	Road Accident Risk (normalized for pop)*	Road accident death Risk (normalized for pop)§	Total Number of Registered Motor Vehicles (in thousands)	Road Accident Rate (normalized for vehicles)‡	Road Accident Death Rate (normalized for vehicles)##	Vehicle Density\$\$

(*) Road Accident Risk: Number of Accidents per Lakh Population

(§) Road Accident Death Risk: Number of Persons Killed per Lakh Population

(#) Road Accident Rate: Number of Accidents Per Ten Thousand Vehicles

(##) Road Accident death rate: Number of Persons killed Per Ten Thousand Vehicles

(\$\$) Vehicle Density: Number of Vehicles per Km of Road

2.22. Accident risk is a measure to observe the number of road accidents in the country

in a year relative to the population for the year. It is expressed in terms of road

accidents per 1,00,000 populations and which provides appropriate measure of incidence of accidents in the country. Number of accidents per a lakh of population increased from 21 in 1970 to 42 in 2010, then dropped to 28 in 2020 (Table 2.8 refer to). In Chart 2.9 the long-run trend of road accident risk

exhibits a general increasing trend till 2010 and then significant decrease has been observed. In short term (refer chart 2.9A) since 2011 to 2015 stable trend has been seen however since 2015 Number of accidents per a lakh of population has been decreasing.

Chart 2.9: Decadal Trend in the number of Accidents and Persons killed per lakh Population: 1970-2020

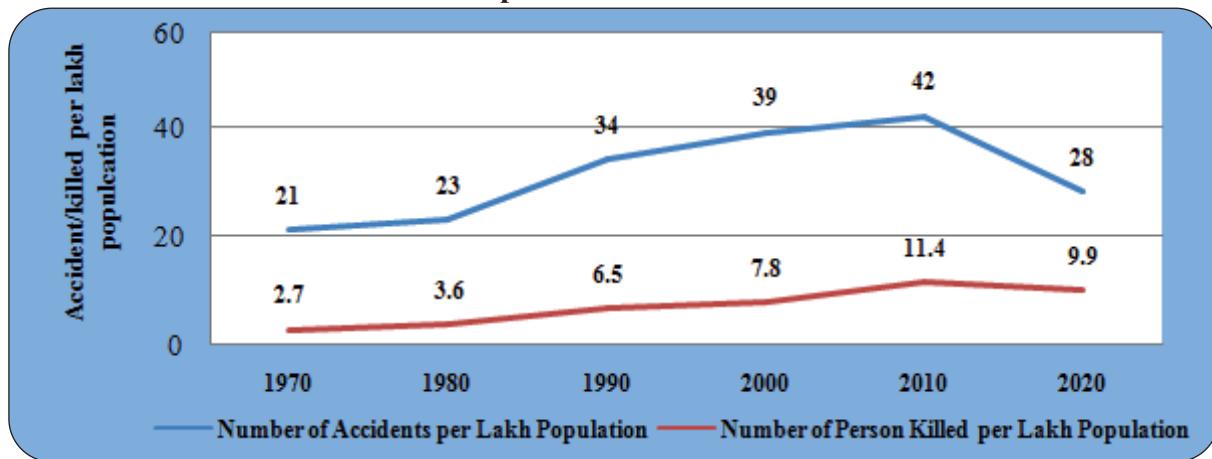

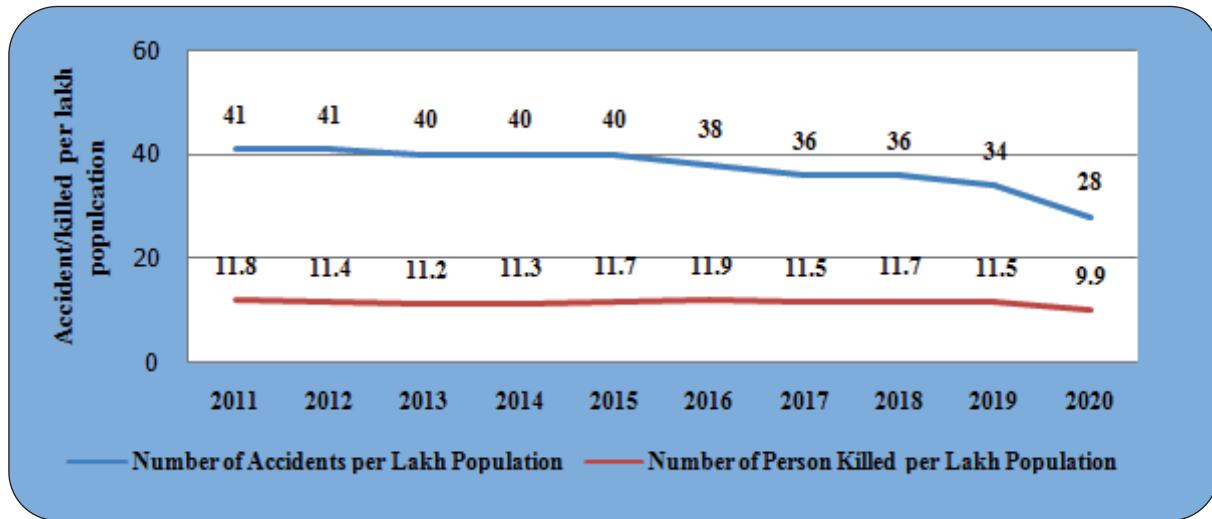

Chart 2.9A: Trend in the number of Accidents and Persons killed per lakh Population : 2011-2020

- 2.23. Road accident fatality risk is measured by the number of accident fatality (persons killed) in a year per 1,00,000 populations. Trend of accidents fatality risk exhibits increasing trend till 2010 in Chart 2.9, thereafter it became stable and then

marked a significant decline in 2020. However, road accident fatality rate in general is growing faster than the population growth rate, however, showed a marked decline from the peak of 11.9 in 2016 to 9.9 in 2020 (refer Chart 2.9).

2.24. Accident rate is measured by the number of road accidents per 10,000 vehicles, depicts rate of road accident relative to vehicular population in the country. The long-run trend of road accident per 10,000 registered vehicles showed in the

Chart 2.10 indicates High rate of motorization in the country, as the ratio declines consistently over the years. In Chart 2.10A also depict short term downward trend.

Chart 2.10: Decadal Trend in the number of accidents per 10,000 Vehicles: 1970-2019

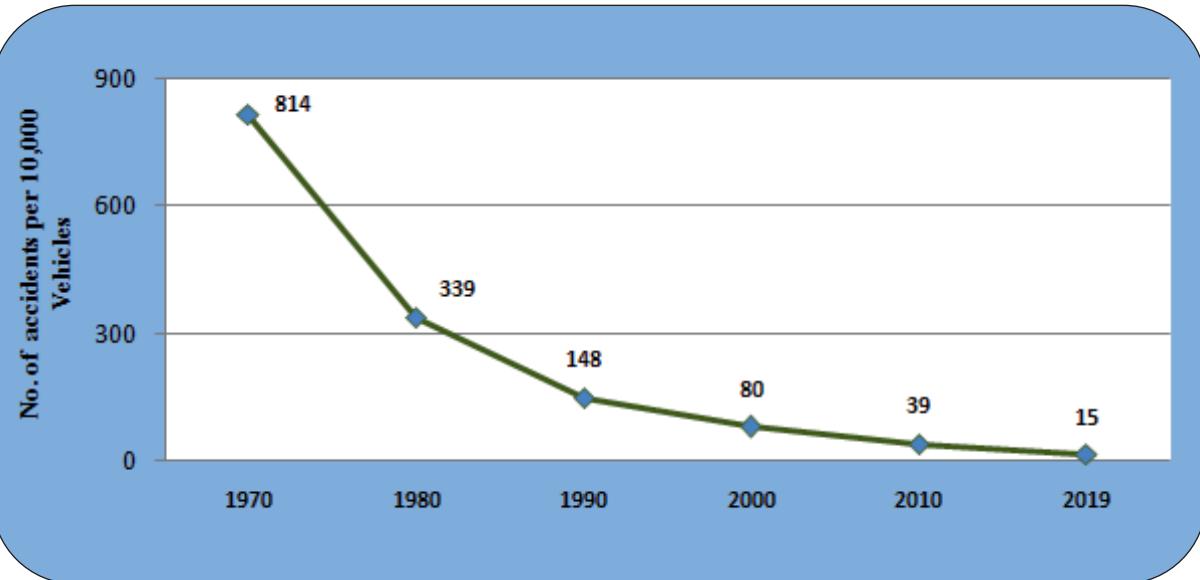

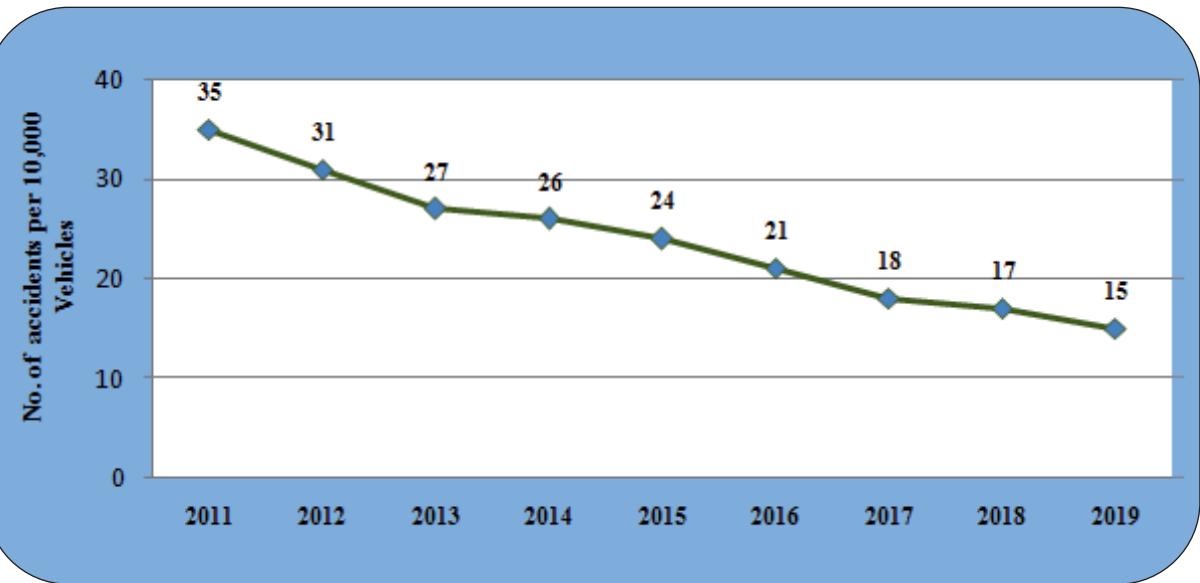

Chart 2.10A: Trend in the number of accidents per 10,000 Vehicles : 2011-2019

2.25. Road accident fatality rate is another indicator which compares the number of fatality (persons killed) with the number of vehicles in the country. It is expressed in terms of road accident fatality per

10,000 vehicles. Both accident rate and fatality rate have shown similar declining trends in long term and short term (refer Chart 2.11& 2.11A).

Chart 2.11: Decadal Trend in the number of Persons killed per 10 Vehicles : 1970-2019

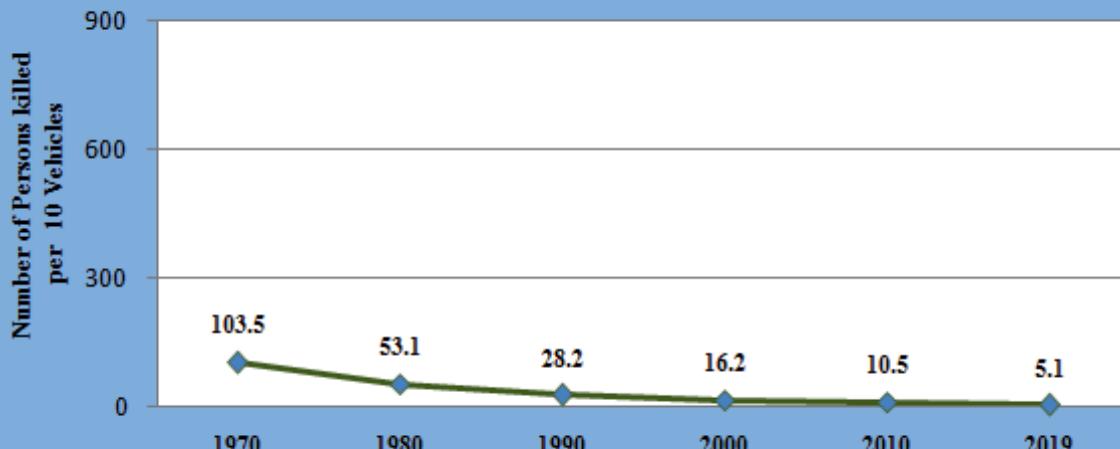

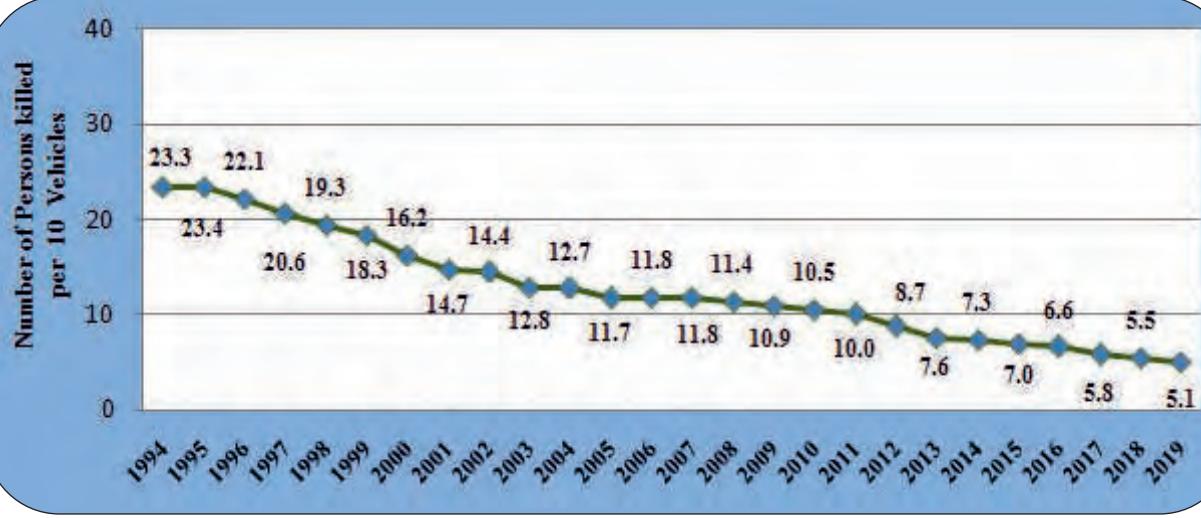

Chart 2.11A: Long Term Trend in the number of Persons killed per 10 Vehicles: 1994-2019

2.26. Vehicular density indicates road traffic congestion and hence, the level of road accident risk. It is expressed in terms of the number of vehicles per kilometre of road length. Ideally, vehicle density should be in terms of vehicles on road per kilometre of road length. However, in absence of these data of all vehicles, the number of registered vehicles and total

road length in km are employed to arrive out vehicle density in India. The long-run trend in chart 2.12 shows vehicle density increasing consistently from 1994 and also in short term the trend in Chart 2.12A is increasing. The rate of increase gained momentum from 2010 onwards as evident from the steeper slope of the curve.

Chart 2.12: Decadal Trend in the number of Registered Vehicles per Km of road: 1970-2019

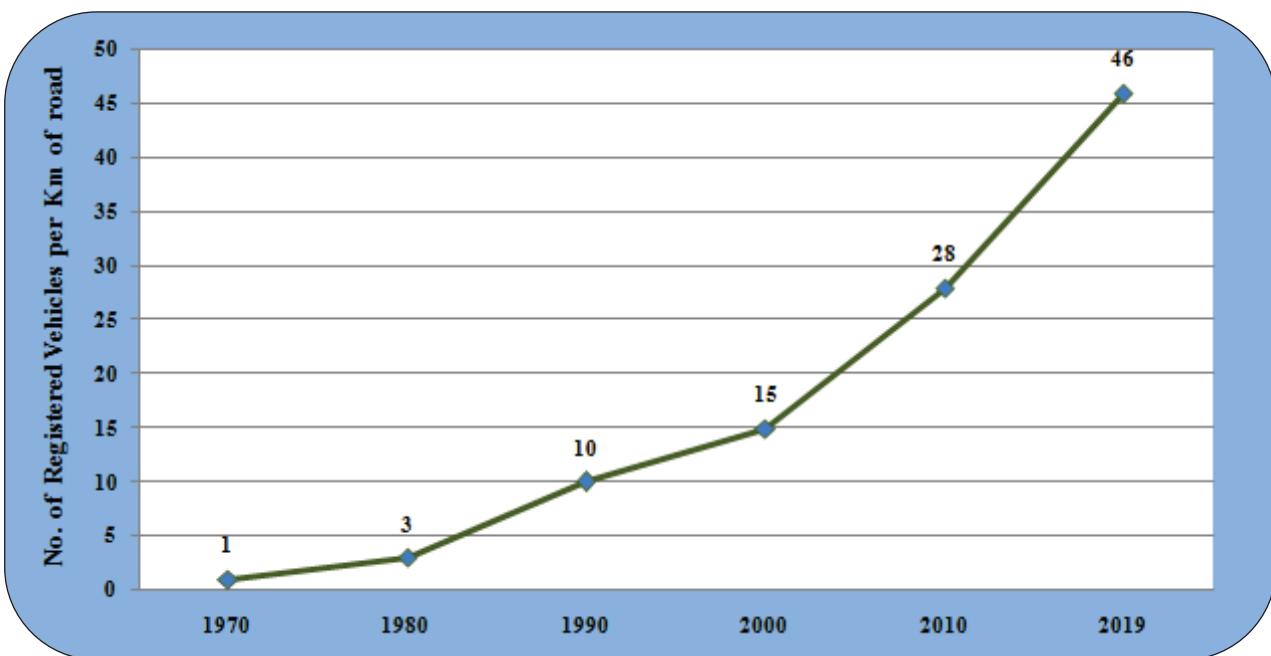

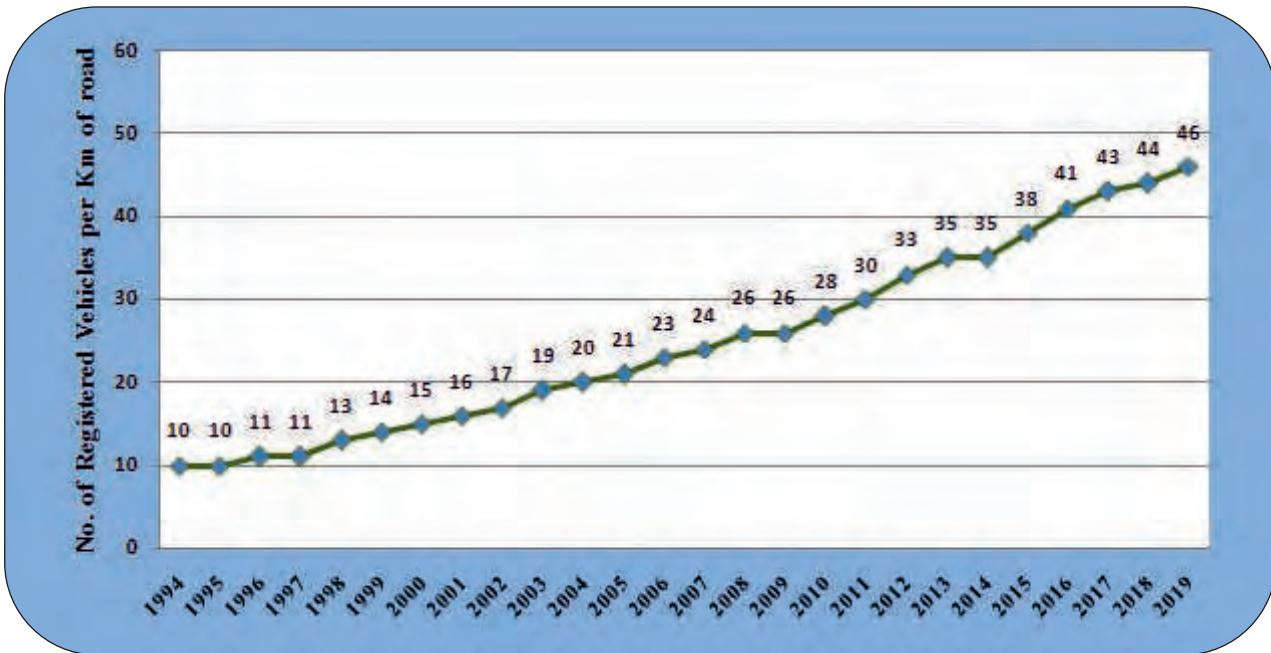

Chart 2.12A: Long Term Trend in the number of Registered Vehicles per Km of road: 1994-2019

Section - 3

ACCIDENTS BY ROAD CATEGORY

- 3.1 The total road length in India is 63.71 lakh km (as on 31st March 2019), consisted of 1.32 lakh km of National Highways, 1.80 lakh km of State Highways and 60.59lakh km of Other Roads (include District Roads, Rural Roads, Urban Roads and Project Roads). In percentage term, National Highways shares 2.1 per cent, State Highways 2.8 per cent and other roads 95 per cent, respectively of the total road length in the country. Though the percentage share of the three broad categories of roads in the total road length is highly uneven, the distribution of the number of road accidents, fatality and injury in 2020 among these road categories was much less skewed.
- 3.2 During 2020, a total 3,66,138 accidents were recorded in the country, of which, 1,16,496 (31.8%) took place on the National Highways (NH) including Expressways, 90,755 (24.8%) on State Highways (SH) and 1,58,887 (43.4%) on other roads (Table 3.1 refer to). Out of total 1,20,806 fatal accidents reported in 2020, 43,412 (35.9%) were on National Highways, 30,171 (25.0%) were on State Highways and 47,223 (39.1%) were on Other Roads (Chart 3.2 & 3.3). However, there has been a marked decline in number of accident, persons killed and injured took place on National Highways and State Highways (Table 3.1 refer to), which is due to accident mitigation measures of Ministry of Road Transport and Highways along with the nationwide lockdown imposed as part of measures implemented to curb the spread of Covid-19 pandemic.

Table 3.1: Road Accidents, Fatalities and Injuries by Road Category (2019 and 2020)

Category of Road	2019			2020			% Change in 2020 over 2019		
	Accidents	Killed	Injured	Accidents	Killed	Injured	Accidents	Killed	Injured
National Highways	1,37,191	53,872	1,37,549	1,16,496	47,984	1,09,898	-15.08	-10.93	-20.1
% share in total	30.6	35.7	30.5	31.8	36.4	31.6			
State Highways	1,08,976	38,472	1,11,831	90,755	33,148	88,208	-16.7	-13.8	-21.1
% share in total	24.3	25.5	24.8	24.8	25.2	25.3			
Other Roads	2,02,835	58,769	2,01,981	1,58,887	50,582	1,50,173	-21.67	-13.93	-25.65
% share in total	45.2	38.9	44.8	43.4	38.4	43.1			
All Roads	4,49,002	1,51,113	4,51,361	3,66,138	1,31,714	3,48,279	-18.5	-12.8	-22.8

3.3 Percentage share of National Highways, State Highways and Other Roads in total accidents, persons killed and injured during 2020 is presented in the Chart 3.1 reveals 31.8 percent of accident, 36.4 percent of death and 31.6 percent of accidents related injuries took place on National Highways which shares only 2.1 percent of total road network in the country need attention. Highways (both National and State) which accounted for only 5% of total road

network witnessed a disproportionately large share of accidents of 56.6 % and 61.6% of accident related fatalities during the year 2020, and naturally become the focus of our attention. More accidents on these have been attributed to higher vehicle speeds and increasingly higher volume of traffic on these roads. In Chart 3.2 reveals despite some fluctuation a general declining trend in number of accidents, fatalities and injuries during 2015 to 2020.

Chart 3.1: Trends of Percentage share in Number of Accidents, Persons Killed and Injured by category of roads during 2020

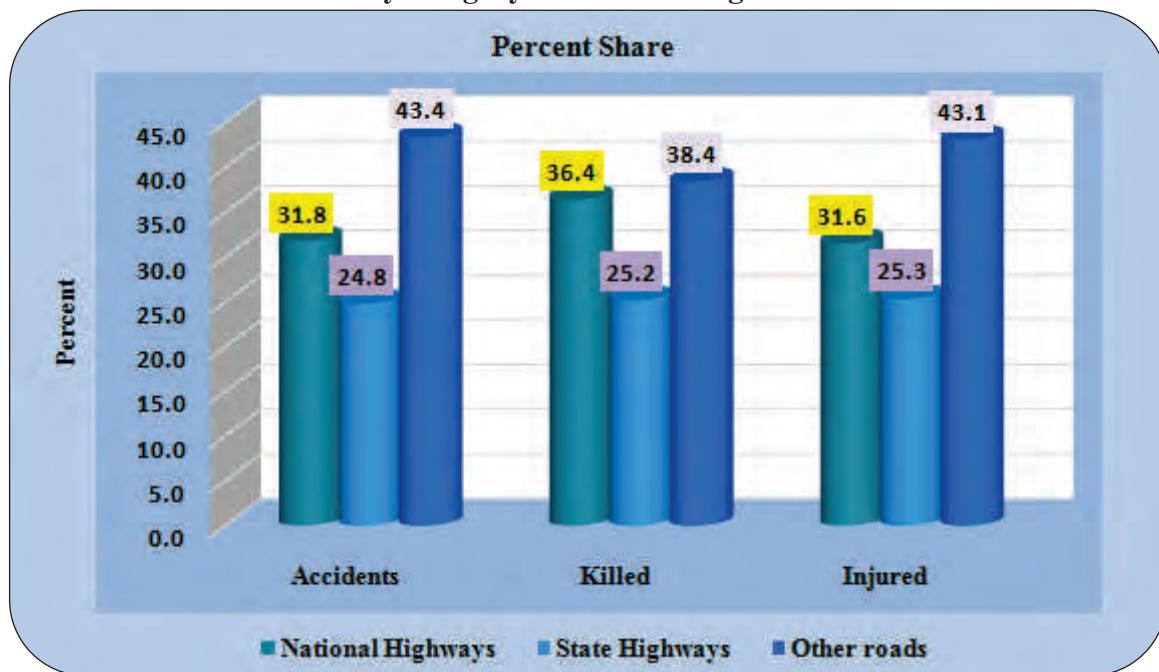

Chart 3.2: Trends in Number of Road Accidents by category of roads during: 2015-2020

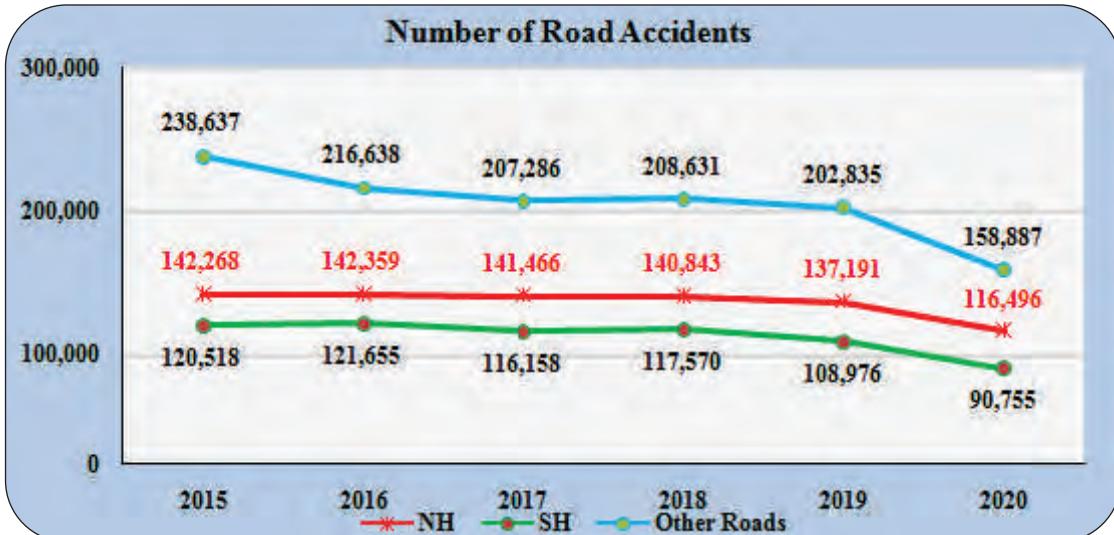

Chart 3.3:Trends in Number of Persons Killed by category of roads during: 2015-2020

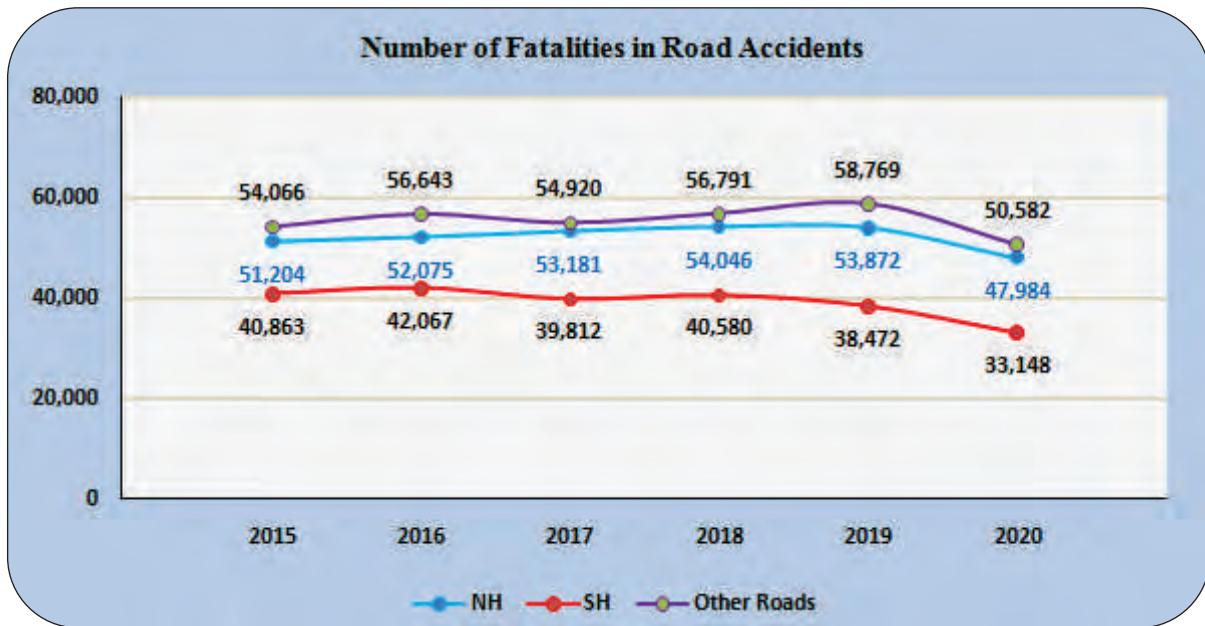

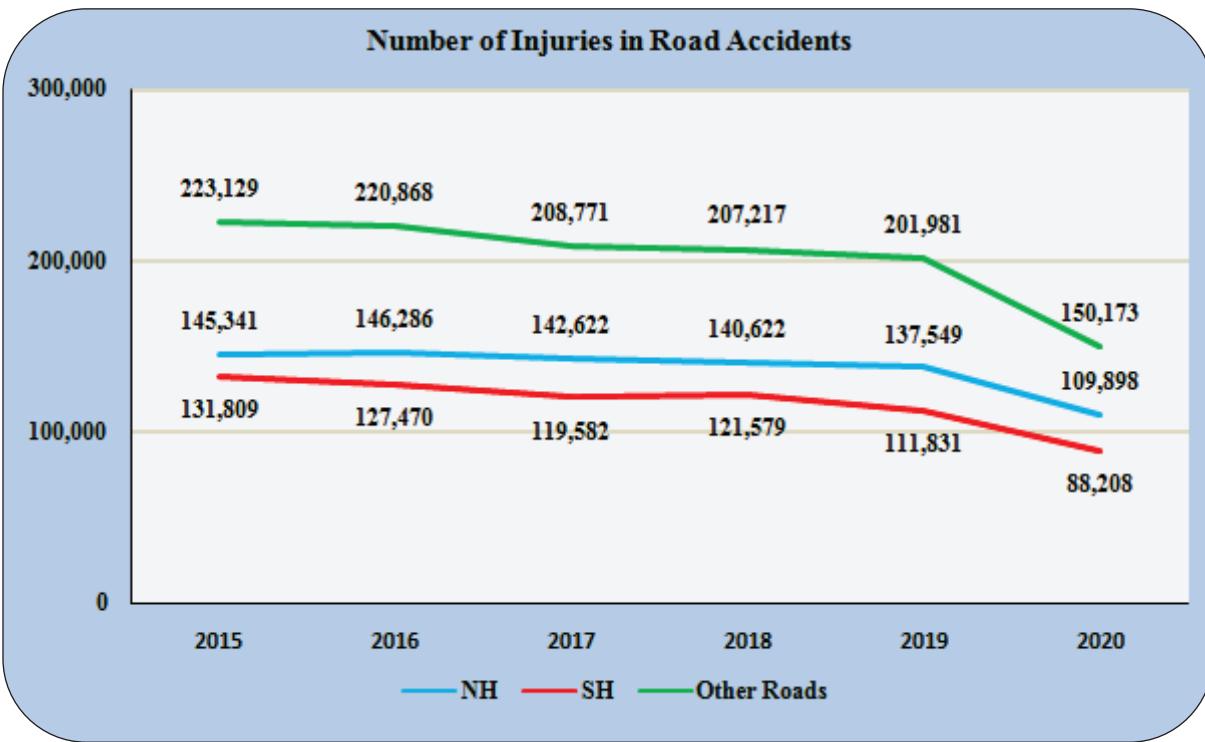

Chart 3.4: Trends in Number of Persons Injured by category of roads during : 2015-2020

FATAL ACCIDENTS BY CATEGORY OF ROADS

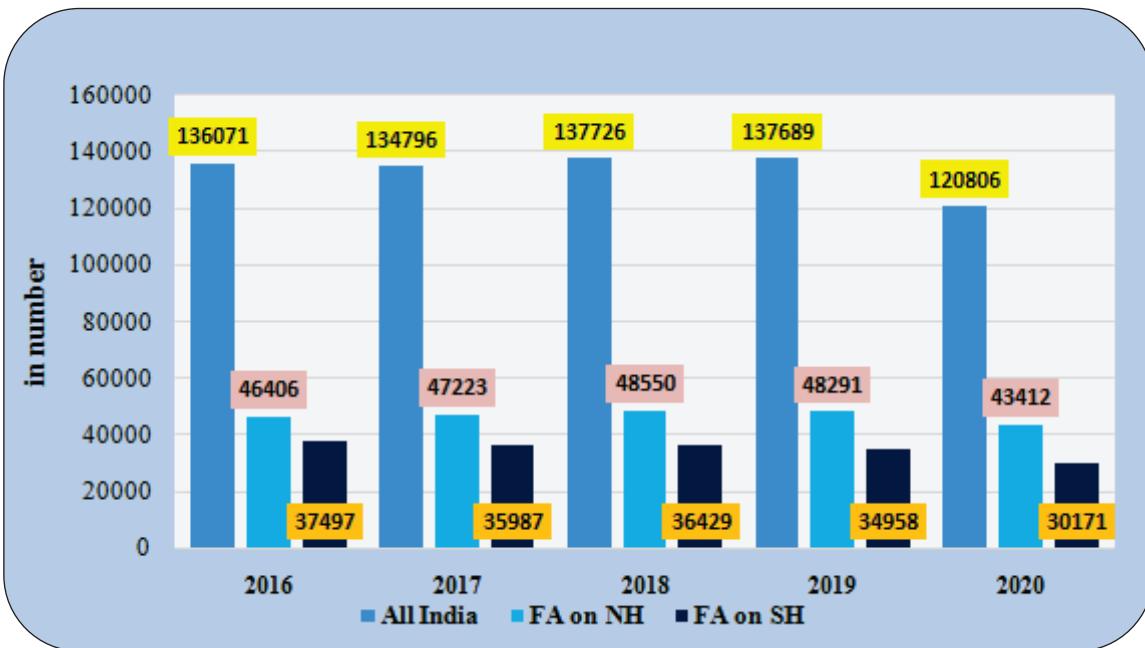

3.4 The distribution of fatal accidents across categories of roads indicates National Highways have significant share in total fatal accidents over the last five years (2016-2020). Trend in percent share of

three categories of roads in terms of accidents, deaths and injuries have stabilized with marginal fluctuations (Chart 3.3). The share of State Highways in total fatal accident has declined from

27.56 percent in 2016 to 24.97 percent in 2020, whereas that for National Highways increased from 34.1 percent to 35.94 percent during the same period. Road category wise trend in growth of fatal accidents is presented in the Chart

3.4 reveals a general declining trend from 2018 onwards. Total number of fatal accidents declined to 1,20,806 in 2020 from 1,36,071 in 2016.

Chart 3.5: Number of Fatal Accidents by category of roads (2016-2020)

FA-Fatal Accidents

Chart 3.6 Fatal Accidents by category of roads

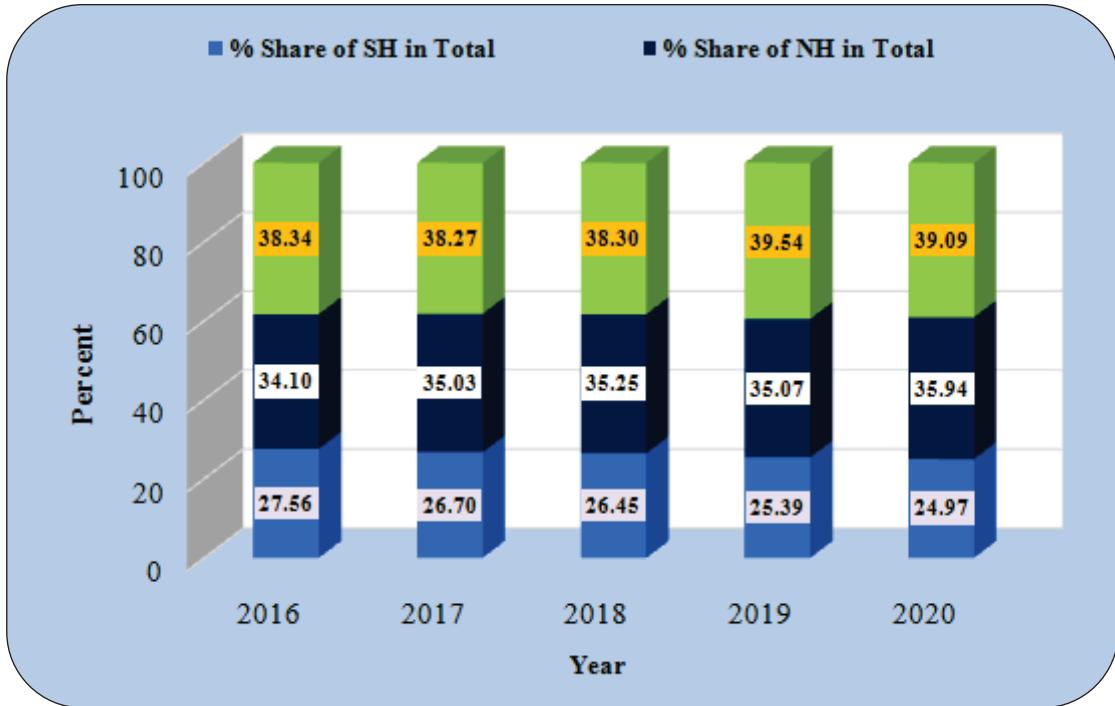

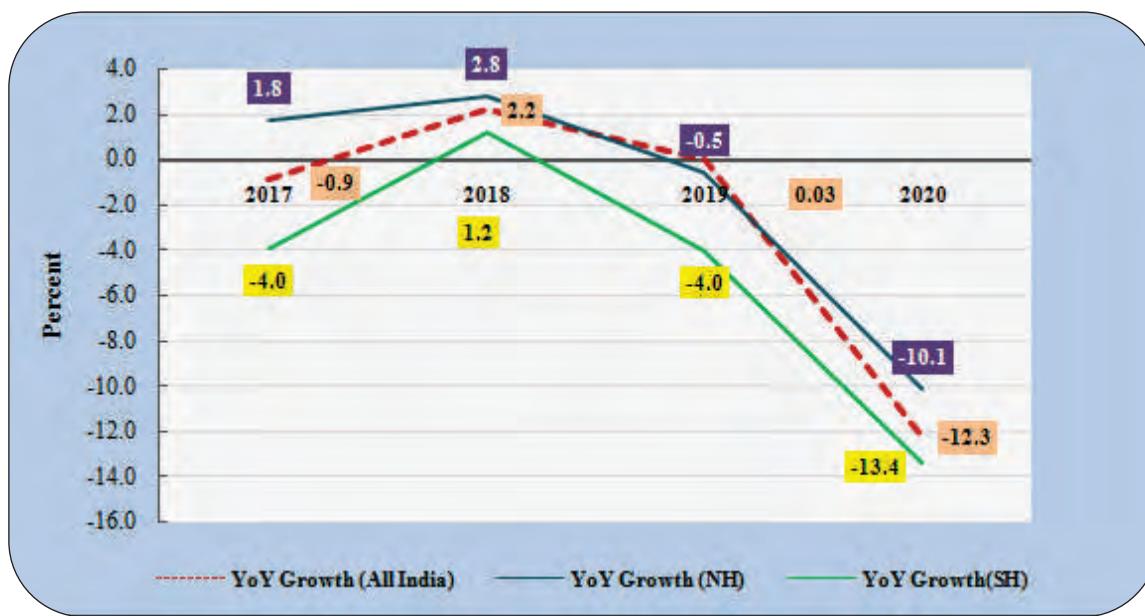

Chart 3.7: Road category wise trend in the growth of Fatal Accidents

LONG-RUN TREND

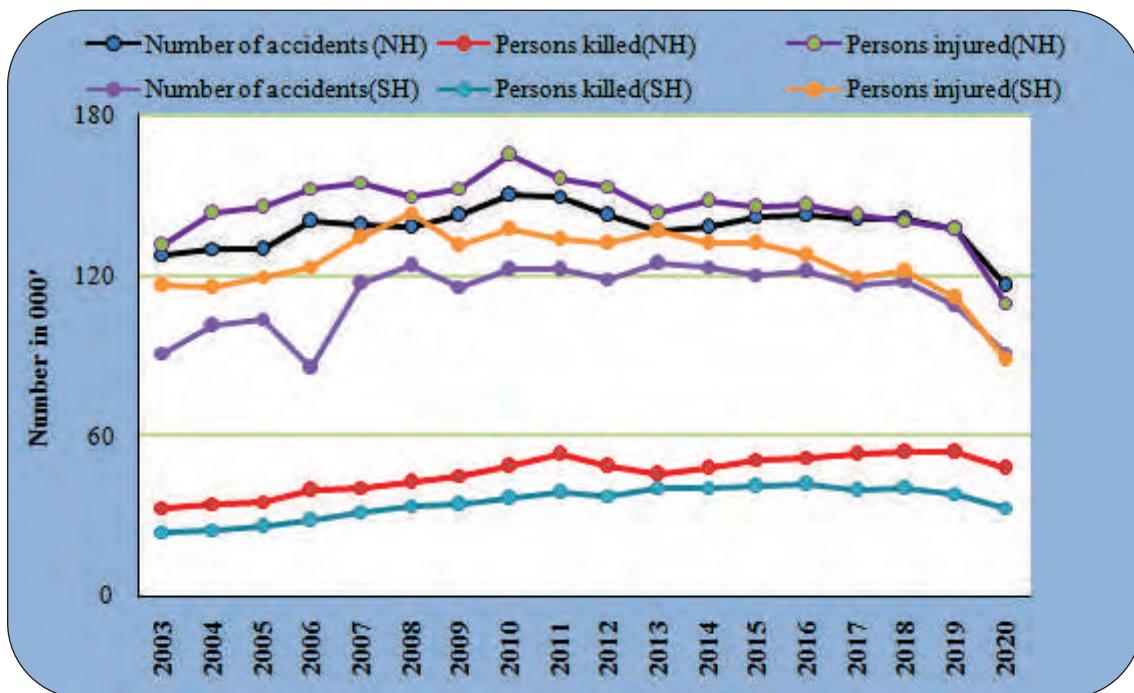

3.5. Despite some fluctuations, there has been a clear declining trend in the number of road accidents and the number of persons injured in the country since 2015 (Table 3.2). Total number of accidents declined from 4, 49,002 in 2019 to 3, 66,138 in 2020, registered a decrease of 18.5 percent relative to same period last year. The trends in number of

accidents and injuries on National Highways and States Highways despite some marginal fluctuations have been on a decline from 2018 onwards (Refer Chart 3.5). However, trends in number of fatalities on National Highways and State Highways have shown marginal increase till 2019 (Chart 3.5), thereafter start moving downward.

Table 3.2: Trends of Major Parameters of Accident by category of Roads

Year	National Highways (including Expressways)			State Highways			Other Roads			Total (All Roads)		
	Road Accidents	Persons killed	Persons Injured	Road Accidents	Persons killed	Persons Injured	Road Accidents	Persons killed	Persons Injured	Road Accidents	Persons killed	Persons Injured
2015	1,42,268	51,204	1,45,341	1,20,518	40,863	1,31,809	2,38,637	54,066	2,23,129	5,01,423	1,46,133	5,00,279

2020	1,16,496	47,984	1,09,898	90,755	33,148	88,208	1,58,887	50,582	1,50,173	3,66,138	1,31,714	3,48,279
CAGR 2015-2020	-3.9	-1.3	-5.4	-5.5	-4.1	-7.7	-7.8	-1.3	-7.6	-6.9	-2.05	-6.9

Chart 3.8: Long-run trends in number of accidents, fatalities and injuries by Category of Roads (2003-2020)

LONG-RUN TREND BY ROAD CATEGORIES

- 3.6. The percentage share of different categories of roads accounting for the number of accidents, persons killed and persons injured have remained largely stable fluctuating over very small margins over the years (refer Chart 3.5). In percentage terms, share of road accidents and persons killed have increased in 2020 as compared to previous year, but in

absolute terms these parameters which are shown declining trend (Table 3.3). The distribution and percentage shares of accidents and fatalities among the road categories underline the high accident and fatality rates and high accident severity on the NH and SH given their relatively low share in the total road length of the country.

Table 3.3: Long-run trends in road accidents, fatalities and injuries by road categories (in percent)

Year	National Highways			State Highways			Other Roads

PROFILE OF ROAD ACCIDENTS – NATIONAL HIGHWAYS

3.7. In 2020, a total of 3, 66,138 road accidents were reported by States/UTs, of which, 1,16,496(31.82%) were on National Highways killed 47,984 (36.43%) people and caused injury to 1,09,898(31.55%) persons. However, the year 2020 witnessed a significant decline in the growth of the key parameters of

accident. There has been consistent decline in number of accidents on National Highways during 2017 to 2020 (Chart 3.6). Total number of accidents declined from 1, 37,191 in 2019 to 1,16,496 in 2020, registered decline of 15.1 percent over 2019. State wise details are at the Annexure 9.

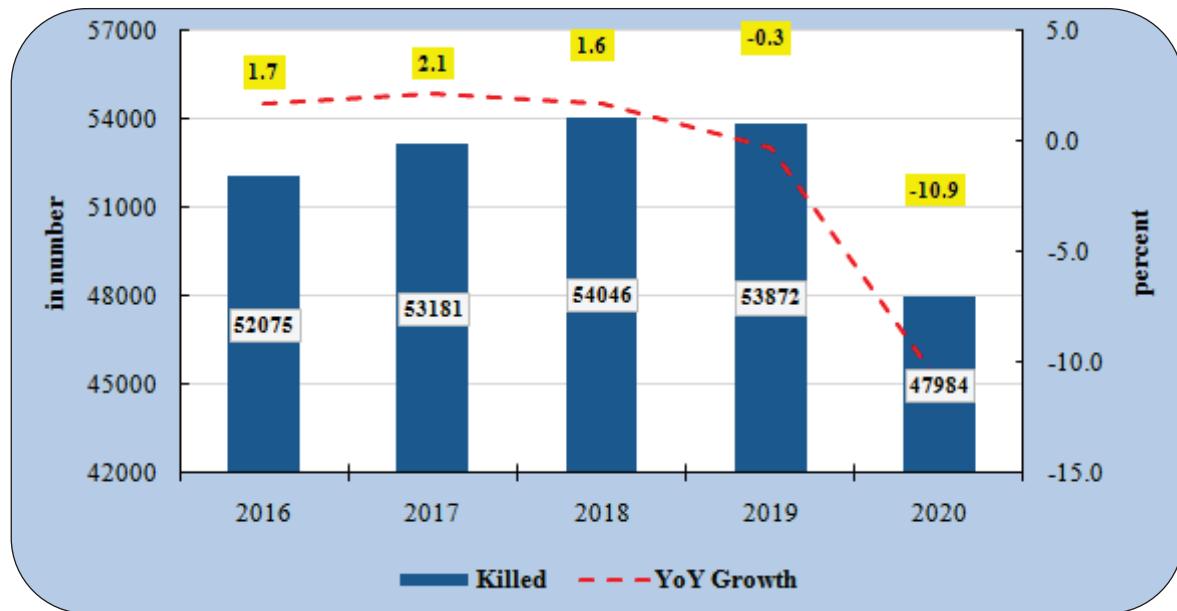

Chart 3.9: Trend in total number of Road Accidents on National Highways: 2016-2020

3.8. There is declining trend in number of persons killed due to road accident since 2018, i.e. declined from 53,872 in 2019 to 47,984 in 2020, registered a decrease of 10.9 percent corresponding to the

period last year (refer Chart 3.7). However, NH shared 36.4 percent of total people died in the country due to road accidents need attention. State wise details are at the **Annexure 10**.

Chart 3.10: Trend in total number of accidents Death on National Highways: 2016 - 2020

3.9. The number of persons injured due to road accidents has been on decline from 2016 onwards, i.e. declined from 1,37,549 in 2019 to 1,09,898 in 2020, recorded a decrease of 20.1 percent compared to

same period last year. (Refer Chart 3.8). NH shared 31.8 percent of total road accident injury in the country. State wise details are at the **Annexure 11**.

Chart 3.11: Trend in total number of accidents related injuries on National Highways during 2016 to 2020

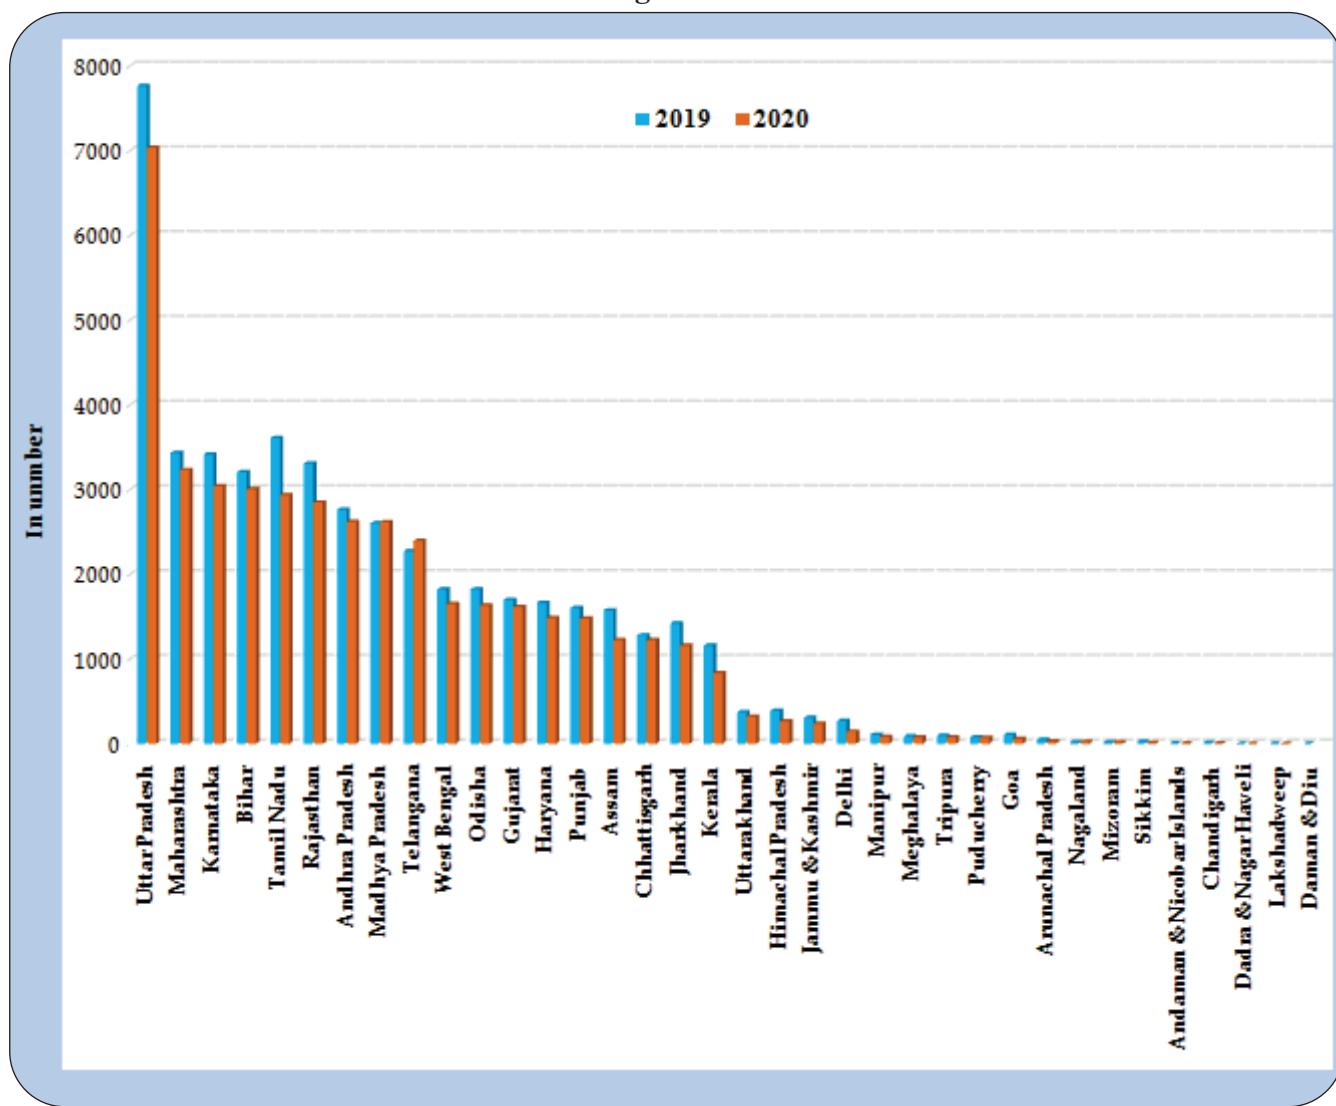

Fatal Accidents on National Highways

3.10. During 2020, total of 43,412 fatal accidents took place on National Highways, whereas 48,291 fatal accidents were reported in 2019, i.e. incidence of fatal accidents dropped to 10 percent in 2020 over 2019. In the Chart 3.9, all States except Madhya Pradesh, Telangana, Nagaland and Mizoram reported less number of fatal

accidents in 2020 as compared to 2019. Uttar Pradesh topped the list with 7031 (16.2%) fatal accidents followed by Maharashtra (3232, 7.4%), Karnataka (3039, 7%) and Bihar (3004, 6.9%) in 2020. Top 10 States together shared about 73.1 percent of total fatal accidents on NH in 2020. State wise details are at the **Annexure 12**.

Chart 3.12: State wise distribution of number of Fatal accident on National Highways during 2019-2020

Top 10 States in Number of Accidents on National Highways

3.11. Top 10 States listed in the Table are selected based on the number of accidents took place on National Highways

reported by States/UTs in 2020. The same set of States which constituted top 10 in 2019 constitutes the top 10 States in 2020.

Tamil Nadu maintains its top position in 2020, for the fifth consecutive year (refer **Annexure 9**) with number of accidents 15269 (13.1%) followed by Uttar Pradesh with 13695 (11.1%) accidents, Karnataka with 11230 (9.6%) accidents, and Madhya Pradesh with 9866 (9.6%) accidents. Except Bihar, all States are listed in Top

Ten States which reported highest number of accidents at national level during 2020 (refer Table 3.4). Top 10 States in Table 3.4 together accounted for about 74.7 percent of accidents on National Highways in 2020.

Table. 3.4: Top 10 States in number of accidents on National Highways

S. No.	States/UTs	2016	2017	2018	2019	2020
1	Tamil Nadu	22,573	20,696	19,583	17,633	15,269

Micro analysis of Road Accidents on National Highways in Top 10 States during 2020

- 3.12. During the last five years i.e. 2016-2020, Top Ten States have contributed to around 73 to 74 percent of total road accidents on National Highways (Table 3.4) in the country. Top 10 States listed in the Chart 2.10, show a general downward trend in the number of accidents. All the Top 10 states registered less number of accidents in 2020 as compared to 2019. The incidence of

accident shown declining trend from 2018 onwards for Uttar Pradesh and Maharashtra. In case of Karnataka, Andhra Pradesh and Tamil Nadu, number of accidents has been on decline. Madhya Pradesh, Rajasthan, Telangana, Kerala and Bihar depict decline in number of accidents in 2020, one reason for this may probably be the impacts of Nationwide lockdown.

Chart 3.13: Trends in Road Accident on National Highways in top 10 States during 2020.

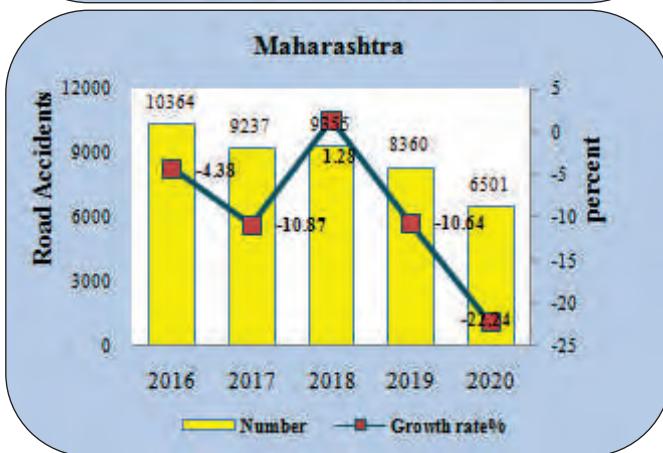

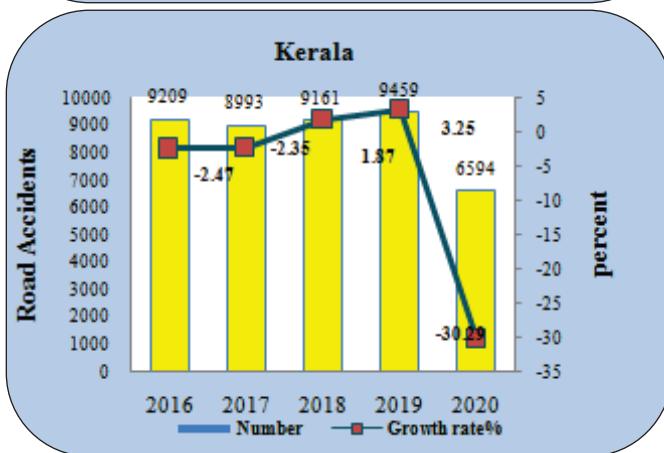

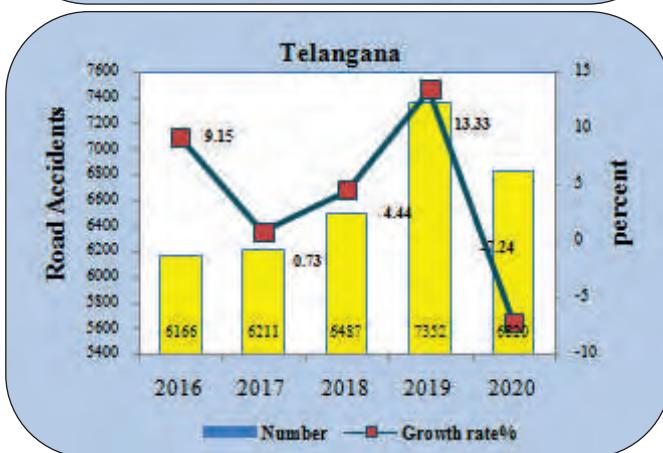

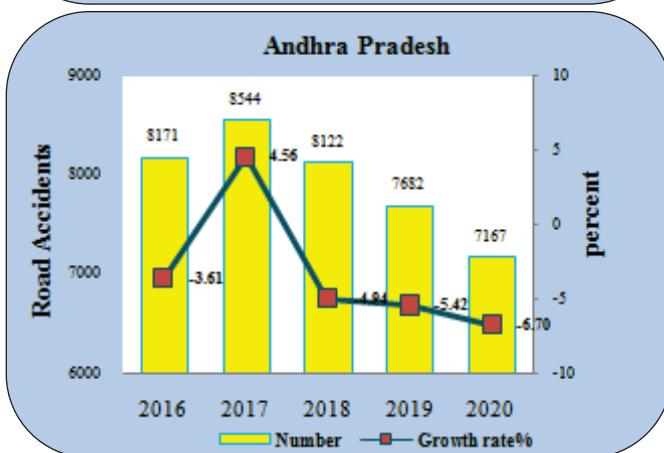

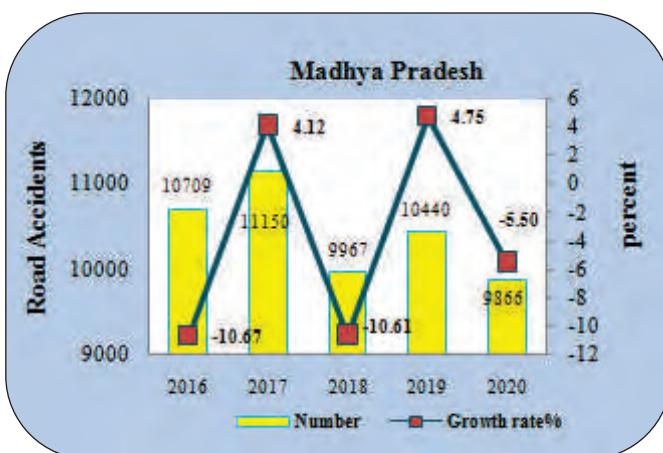

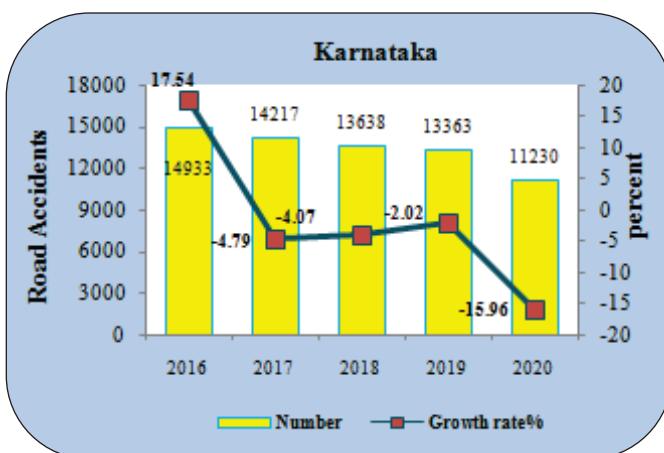

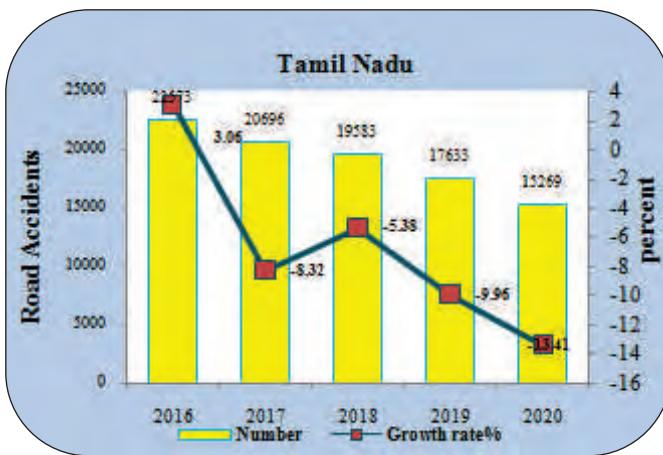

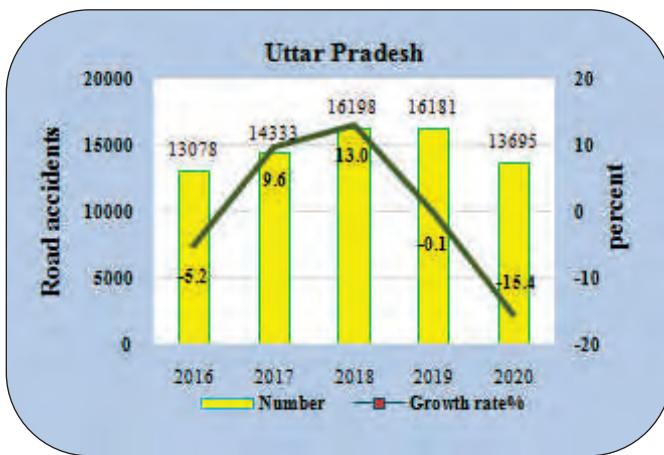

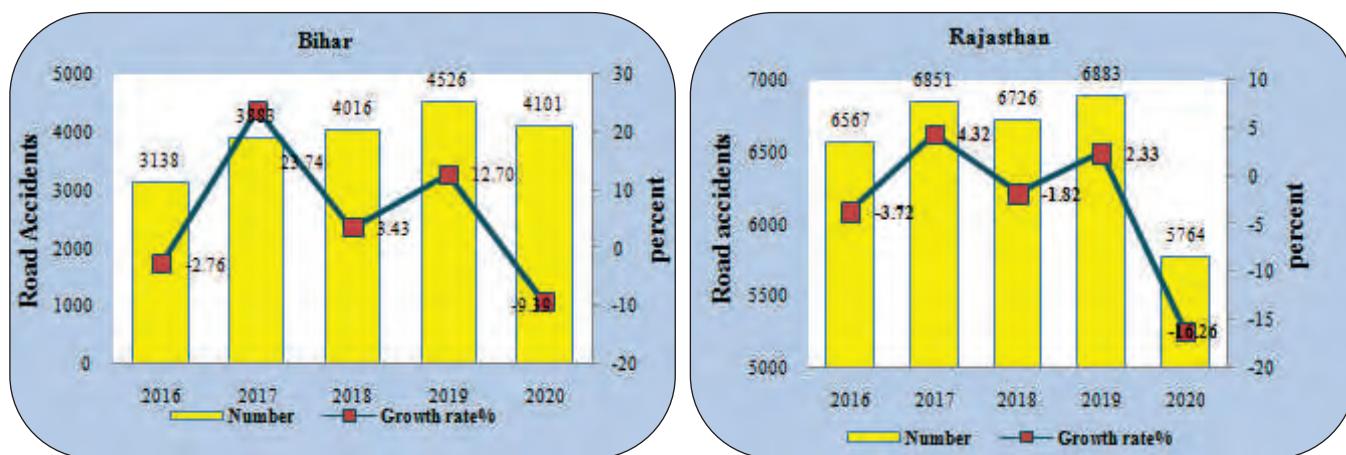

chart 3.13 continued...

Road Accident Fatalities on National Highways

3.13. During 2020, a total of 47,984 accidents related deaths took place on National Highways, which constitute about 36.4 percent of total accident deaths in the country. However, less number of

fatalities reported on National Highways in 2020 as compared to 2019. The incidence of accident related death on NH dropped to 10.9 percent point in 2020 i.e. from 53872 in 2019 to 47984 in 2020.

Top 10 States in Number of Accident Fatalities

3.14. Top 10 States are selected based on number of fatalities reported on National Highways during 2020. Top Ten States reported less number of fatalities in 2020 as compared to 2019. Uttar Pradesh maintains its top position in road accident fatalities at National level in 2020 and also topped in respect of number fatalities reported on National Highways by contributing 16.4 per cent followed by Maharashtra (7.4%), Karnataka (6.9). West Bengal is at the bottom (10th position) with a share of 3.8

per cent (Table 3.5 refer to). Other than West Bengal, all States listed in Top States which recorded highest number of fatalities on NH are also included in the Top 10 States of the highest number of fatalities in 2020 at national level. Top Ten States together accounted for more than 72.6 percent of accident fatalities on NH and share of National Highways in total accidents fatalities has also been increased during 2016 to 2020(refer Table 3.5 below).

Table 3.5: Top 10 States in Number of Fatalities on National Highways

S. No.	States/UTs	2016	2017	2018	2019	2020

Figures in the parentheses represents percentage share in the total of respective columns.

Micro Analysis of Road Accidents Fatalities on National Highways in Top 10 States during 2020

3.15. During the last five years from 2016 to 2020, Top 10 States in Table 3.5 have been sharing about 70 to 72.6 percent of total road accidents fatalities on National Highways (Table 3.5) in the country. However, all top t10 States registered less number of accidents fatalities in 2020 as compared to 2019. Trend in number of accidents fatalities for Uttar

Pradesh, Maharashtra, Bihar, Karnataka, West Bengal, Tamil Nadu and Rajasthan depicts a downward slope particularly after 2018 (Chart 3.11 refers to). Madhya Pradesh, Telangana, and Andhra Pradesh recorded a marked decline in number of fatalities in 2020, one reason for this may probably be the impacts of nationwide lockdown.

Chart 3.14: Trends in Road Accident Fatalities on National Highways in top 10 States during 2020

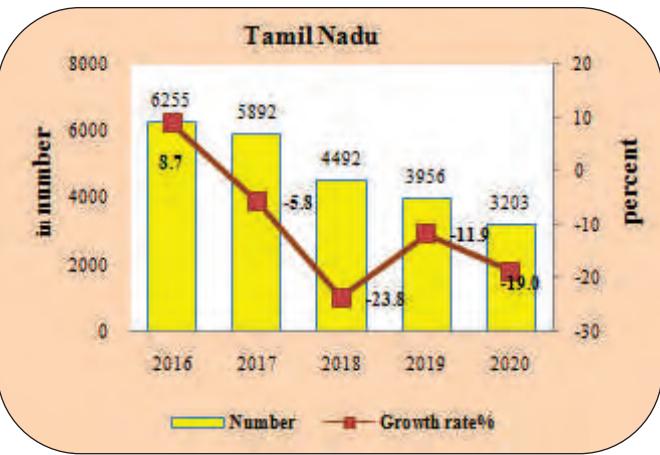

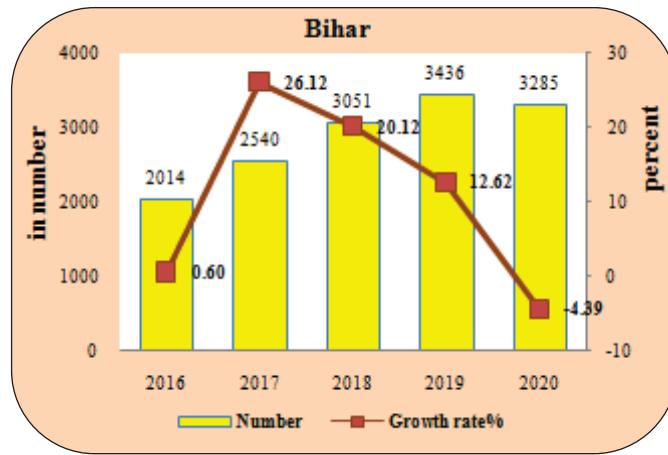

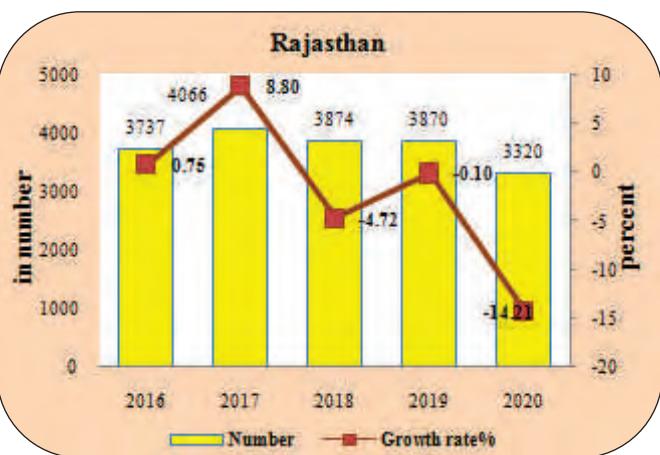

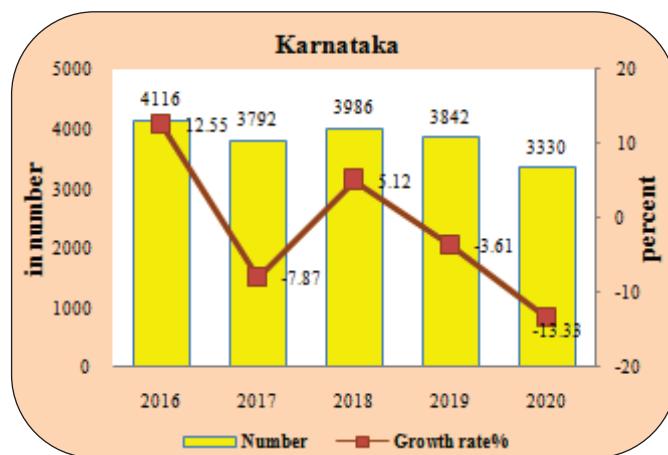

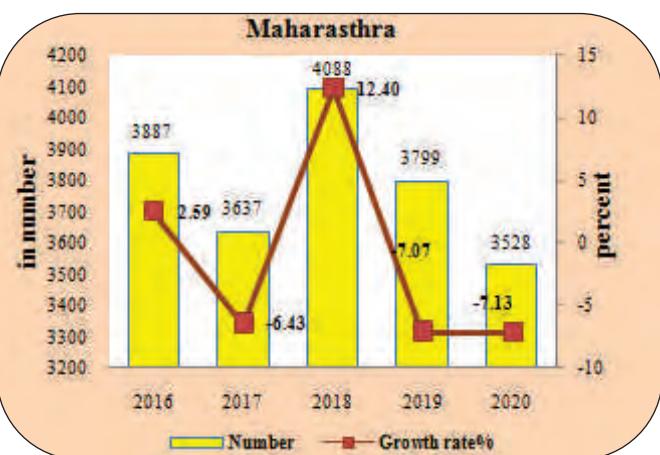

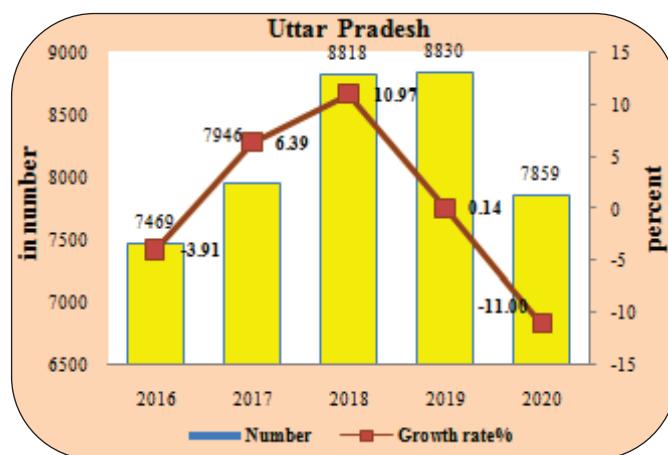

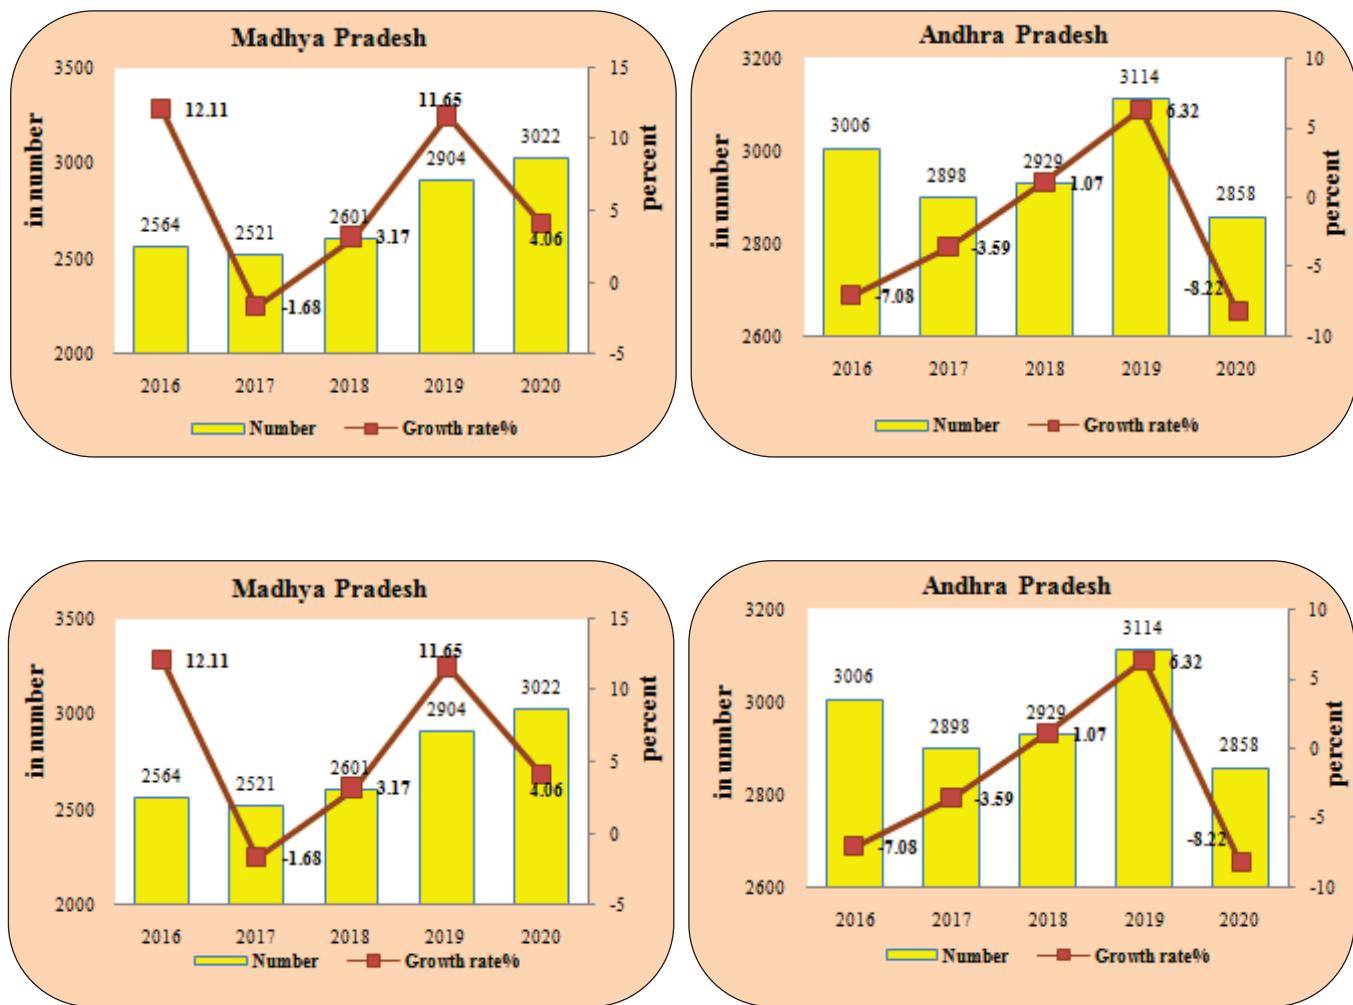

Chart 3.14 continued...

Road Accidents and Fatalities on different categories of NH

3.16. Given the large share of National Highways in accident related deaths of around 35.7 percent and 36.4 percent in 2019 and 2020 respectively, the Supreme Court Committee constituted to oversee the progress to this report desired to have greater detail in terms of number of accidents and that related number of deaths happening on National Highways, jurisdiction wise i.e. by the category of accidents/deaths happening on National

Highways falling under the administrative control of NHAI, on National Highways falling under the administrative control of State PWDs and on National Highways falling under the administrative control of other Departments. Accordingly, additional information was called from States for the calendar year 2020 for these categories, Road user wise and by the type of violation experienced in these segments.

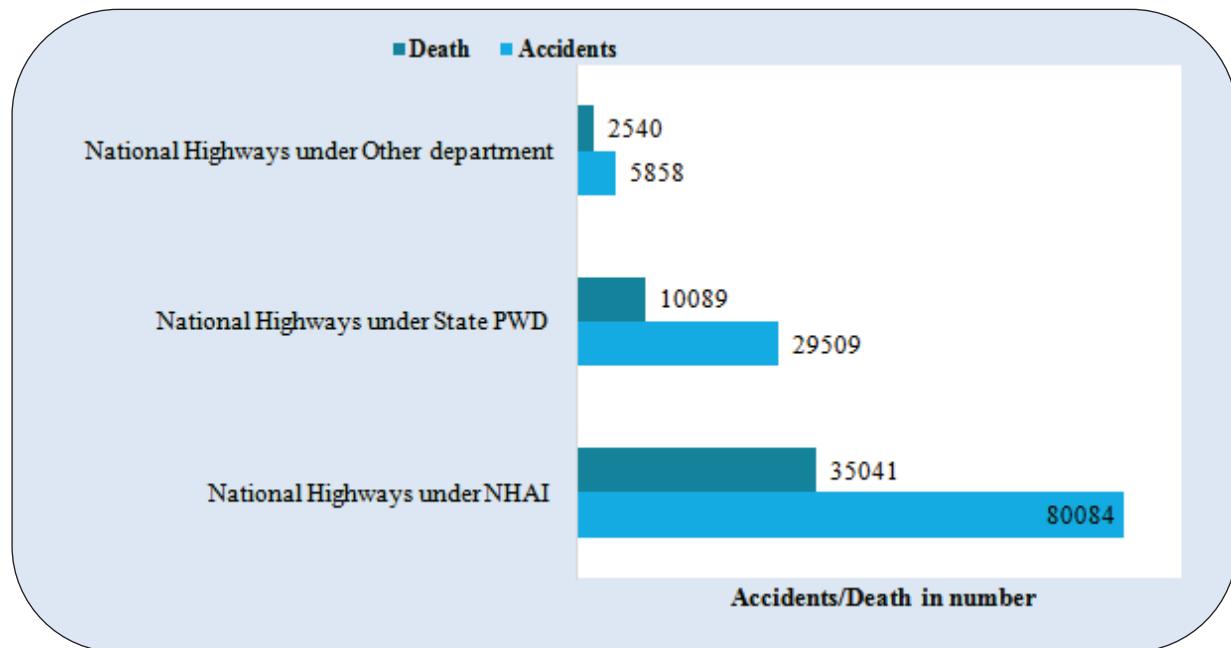

3.17. Road Accidents and Accident related deaths on different categories of NH presented in Chart 3.12 and 3.13, reveals more than 69.4 percent (80,084) of accident and 73.5 percent (35,041) of accident related death took place on National Highways falling under the administrative control of NHAI in 2020. National Highways falling under State PWD accounted for nearly 25.6 percent (29,509) of road accidents and 21.2

percent (10,089) of Road Accident deaths. The remaining 5.1 percent (5858) accidents and 5.3 percent (2540) Road Accident deaths are accounted for National Highways under other Departments (refer to Table 3.6). The state wise details of Accidents and Road Accident related deaths on different categories of National Highways may be seen at **Annexure 13(A)**

Table 3.6: Road Accidents and Fatalities on different categories of NH: 2019 -2020

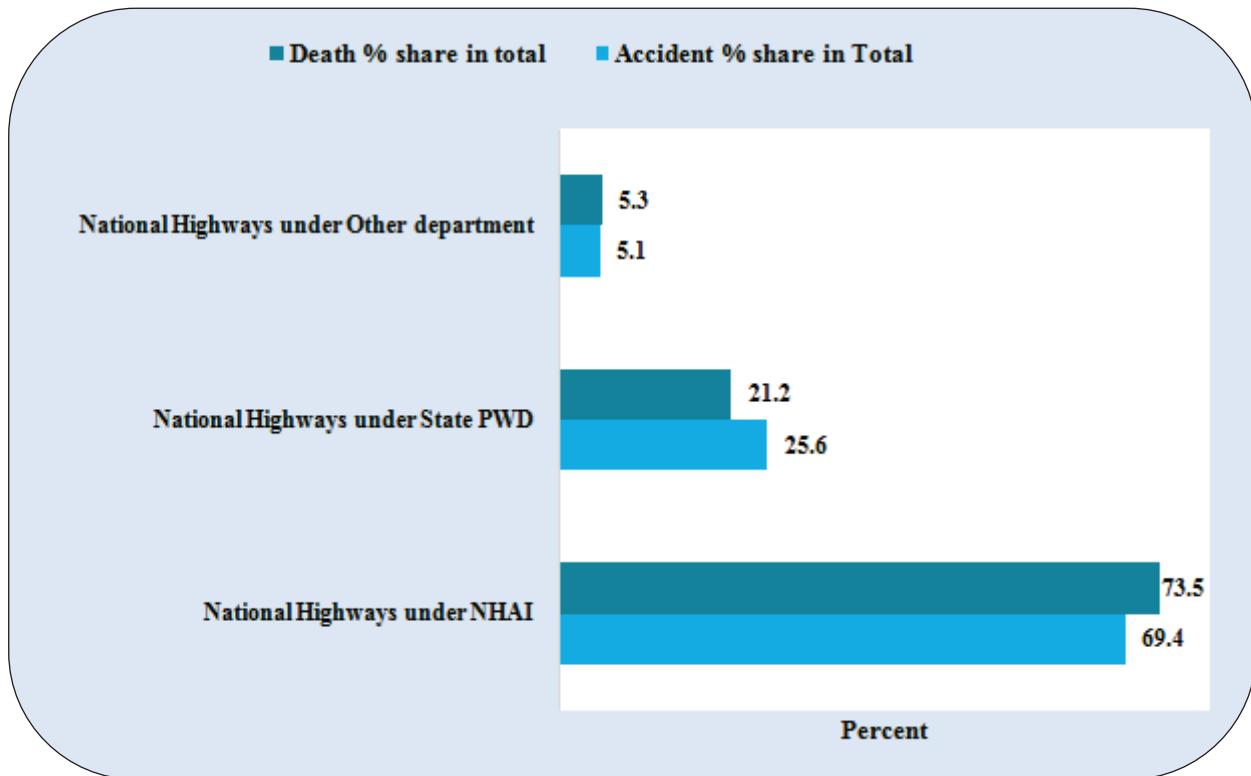

S. No	Category	2019		2020		% Change in 2020 over 2019	
		Accidents	Fatalities	Accidents	Fatalities	Accidents	Fatalities

Chart 3.16: Road Accidents and Fatalities on different categories of NH during 2020

Road Accidents and Fatalities due to Traffic Rule Violations

3.18. Road Accidents and Road Accident Deaths took place on different categories of NH by Traffic rule violation is presented in the Table 3.7 and Chart 3.14 reveals over speeding is the major reason for accident and death. In 2020, around 74 percent of accidents and 69 percent of death were recorded due to over speeding. The indicators of traffic rule violations show downward trend in 2020 as compared to 2019, the highest decline

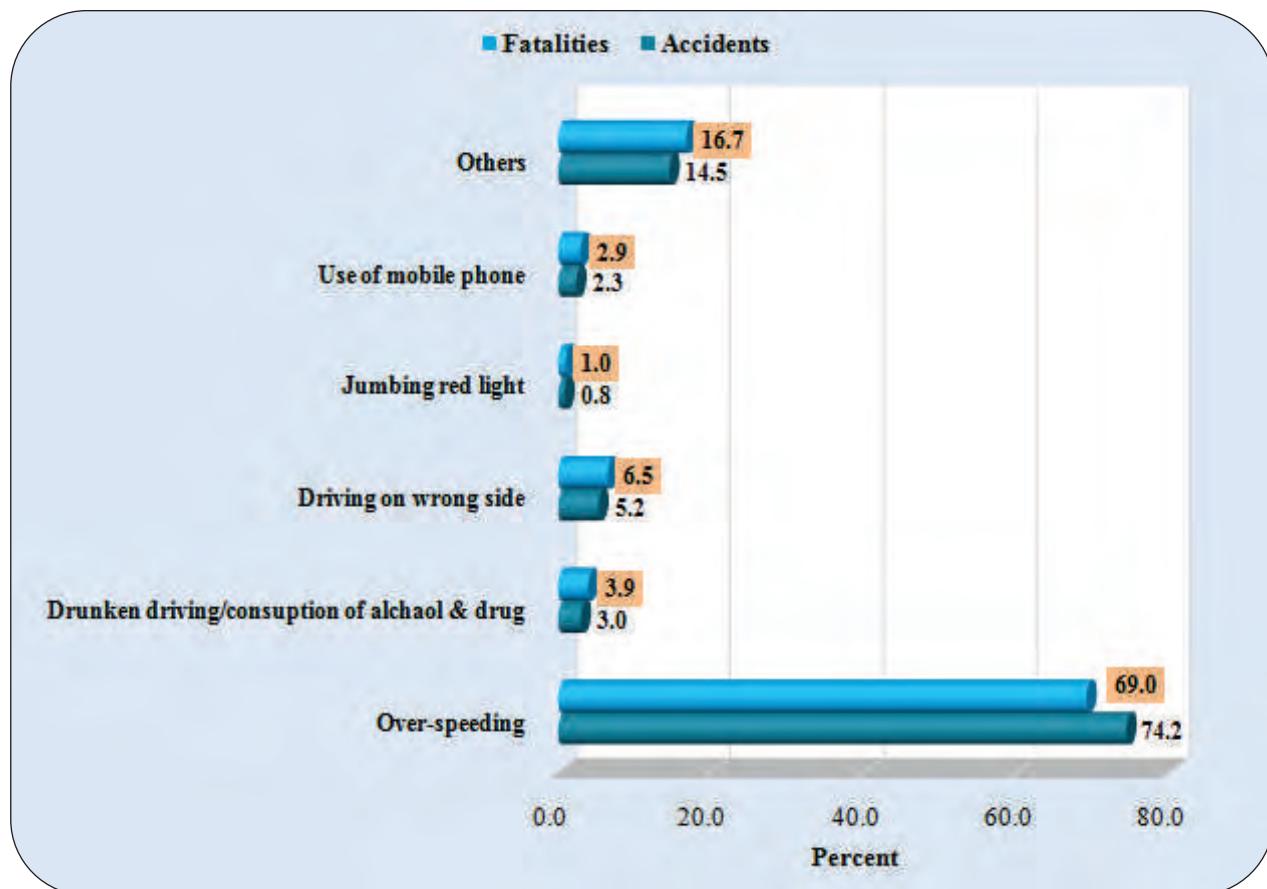

recorded in the category of “Drunken Driving/Consumption of Alcohol” (33.3%), followed by “Use of mobile Phone” (26.3%), seen in Table 3.7. However, number of death due to traffic rule violation has increased for two categories, i.e. jumping red light (266 in 2019 to 476 in 2020) and driving on wrong side (2726 in 2019 to 3099 in 2020), may be seen in Table 3.7.

Table 3.7: Road Accidents and Fatalities on different categories of NH by Traffic rule violations (2019 -2020)

Category	2019		2020		% Change	
	Accidents	Fatalities	Accidents	Fatalities	Accidents	Fatalities
Over-speeding	98,294	36,566	85,616	32,873	-12.9	-10.1
Drunken driving/consumption of alcohol & drug	5,122	2,376	3,416	1,862	-33.3	-21.6
Driving on wrong side	7,076	2,726	6,050	3,099	-14.5	13.7
Jumping red light	984	266	919	476	-6.6	78.9
Use of mobile phone	3,660	1,585	2,697	1,389	-26.3	-12.4
Others	22,055	10,353	16,753	7,971	-24.0	-23.0

* Total may not tally due to non-reported data from Himachal Pradesh

Chart 3.17: Road Accidents and Fatalities on different categories of NH by Traffic Rule Violations

3.19. Category wise distribution of indicators of traffic rules violation during the year 2020 presented in Table 3.8 reveals, 52 percent of accident and accident related fatalities recorded on NH which are under jurisdiction of NHAII. National Highways under State PWD recorded 18 percent of accident and 13.7 percent of fatalities in 2020. Other indicators like

drunken driving, drawing on wrong side, jumping red light and use of mobile phone together account for about 8.1 percent of accident and 10.2 percent of fatalities on NH under NHAII, corresponding share of NH under State PWD is about 2.4 of accident and 3 percent of fatality. State wise details are at Annexure 13-C.

Total	1,15,451	47,670	100	100

Total may not tally due to non-reported data from Himachal Pradesh

- 3.21 Road user category wise distribution of accidents and fatalities presented in Chart reveals 69.4 percent of accidents and 73.5 percent of fatalities took place

on National Highways falling under the control of NHAI and followed by NH under the control of States PWD. Category wise breakup is at table 3.9.

Chart 3.18: Road user category wise distribution of Accidents and Fatalities

- 3.22. Category wise distribution of indicators of road users during the year 2020 presented in the Table 3.10 show, two wheelers accounted for 27.2 percent of total accident deaths on National Highways falling under NHAI, followed by cars, taxis, Vans & LMVs (12.8%), pedestrians (12.3%), Trucks of (8.6%),

Buses (2.2%) and bicycles (1.7%). These are not very different from the data on percentage share for these road user categories (for all roads as a whole) and therefore, requisite change in the design of the road and prescribed speed limit needs to be altered by all the concerned agencies.

Table 3.10: Road user category wise Road Accident Deaths on different categories of NH during 2020

Profile of Road Accidents – State Highways

3.23. State Highways (SH) with 1.79 lakh kilometres of road constitute 2.8 percent of total road network in the country. In 2020, total of 3,66,138 road accidents were reported, of which, 90,755 were on State Highways (24.8%) killing 33,148 (25.2 %) people and causing injury to 88,2.8 (25.3%) persons. The number of

road accident on SH shows declining trend since 2016 except for a slight increase recorded in 2018. Total number of accidents declined from 1,08,976 in 2019 to 90,755 in 2020, registered a decline of 15.1percent over 2019 (Chart 3.12 refer to).

Chart 3.19: Total number of Road Accidents on States Highways during 2016 to 2020

3.24. The number road accident deaths and injuries on State Highways presented in Chart 12.13 and 12.14 show declining trend since 2016, except for slight

increase recorded in 2018. However, there has been drastic decrease in number death and injuries during 2018 to 2020, may be seen in Charts below.

Chart 3.20: Total number of accidents death on States Highways during 2016 to 2020

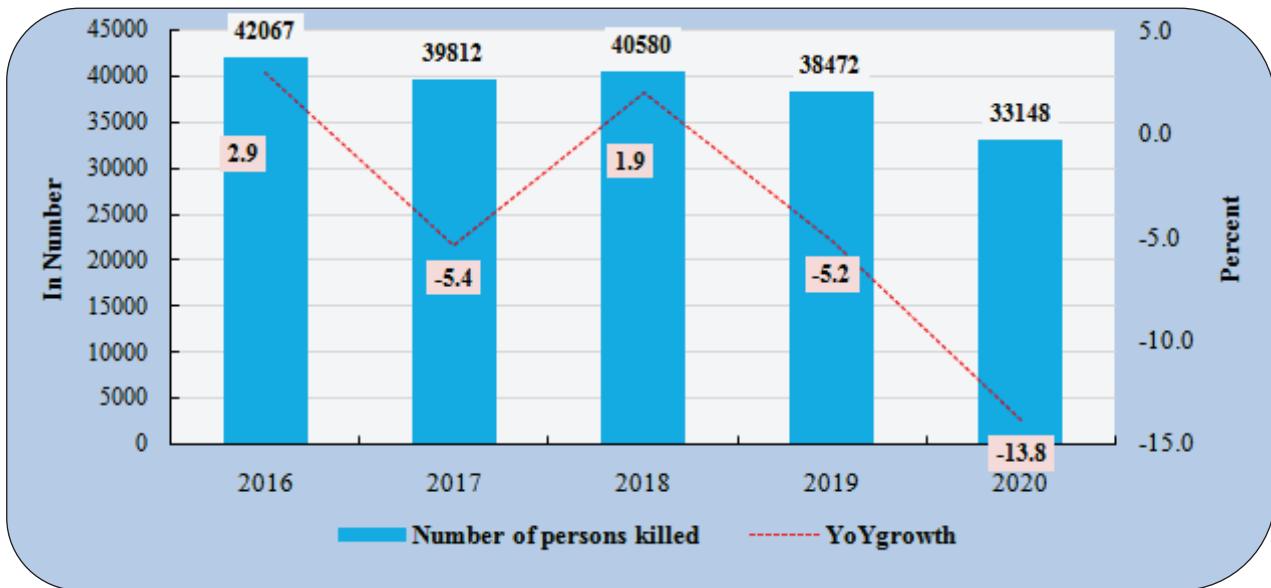

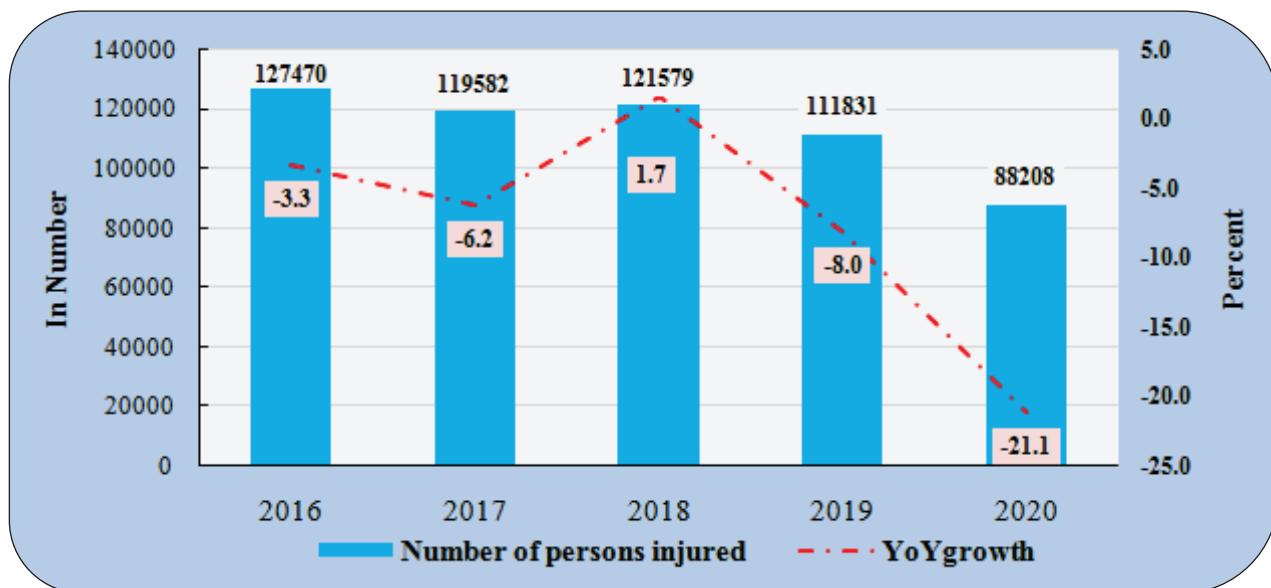

Chart 3.21: Total number of Injuries on States Highways during 2016 to 2020

Section - 4

CAUSES OF ROAD ACCIDENTS

4.1 Road accidents are multi-causal and are the result of an interplay of various factors. These can broadly be categorized into those relating to (i) human error, (ii) road condition/environment and (iii) vehicular condition. These factors act in an interactive manner to cause road accidents. Any strategy for designing the counter

measures for accidents should therefore be based on a safe systems approach which simultaneously recognizes the importance of traffic legislation for promoting safe road user behaviour, safe road designs (lane width, shoulder presence, number of lanes, median, vehicle design etc.) and safe vehicle design.

I. HUMAN ERROR

4.2 Accidents caused by human error include (i) traffic rule violations (ii) driving

without valid driver license and (iii) non-use of safety devices.

TRAFFIC RULES VIOLATIONS

4.3 The indicators of traffic rule violations recorded a decline in growth in 2020 compared to 2019. Road accidents attributable to various types of traffic rules violations reveals that 'over speeding' constitute the main violation associated with accidents, accident related deaths and injuries, for the third consecutive year in 2020 (Table 4.1). In 2020, 'over speeding' accounting for 72.5 percent of the road accidents, 69.3 percent of total deaths and 73.4 percent of total injuries. However, less number of accidents, fatalities and injuries due to over speeding" is recorded in 2020 as compared to same period last year. 'Driving on the wrong side / lane indiscipline' is the second most important cause accounting for 5.5 percent of the road accidents, 5.6 percent of total deaths and 5.6 percent of total injuries.

4.4 Violation of any traffic rule constitutes human error or driver's fault. But from

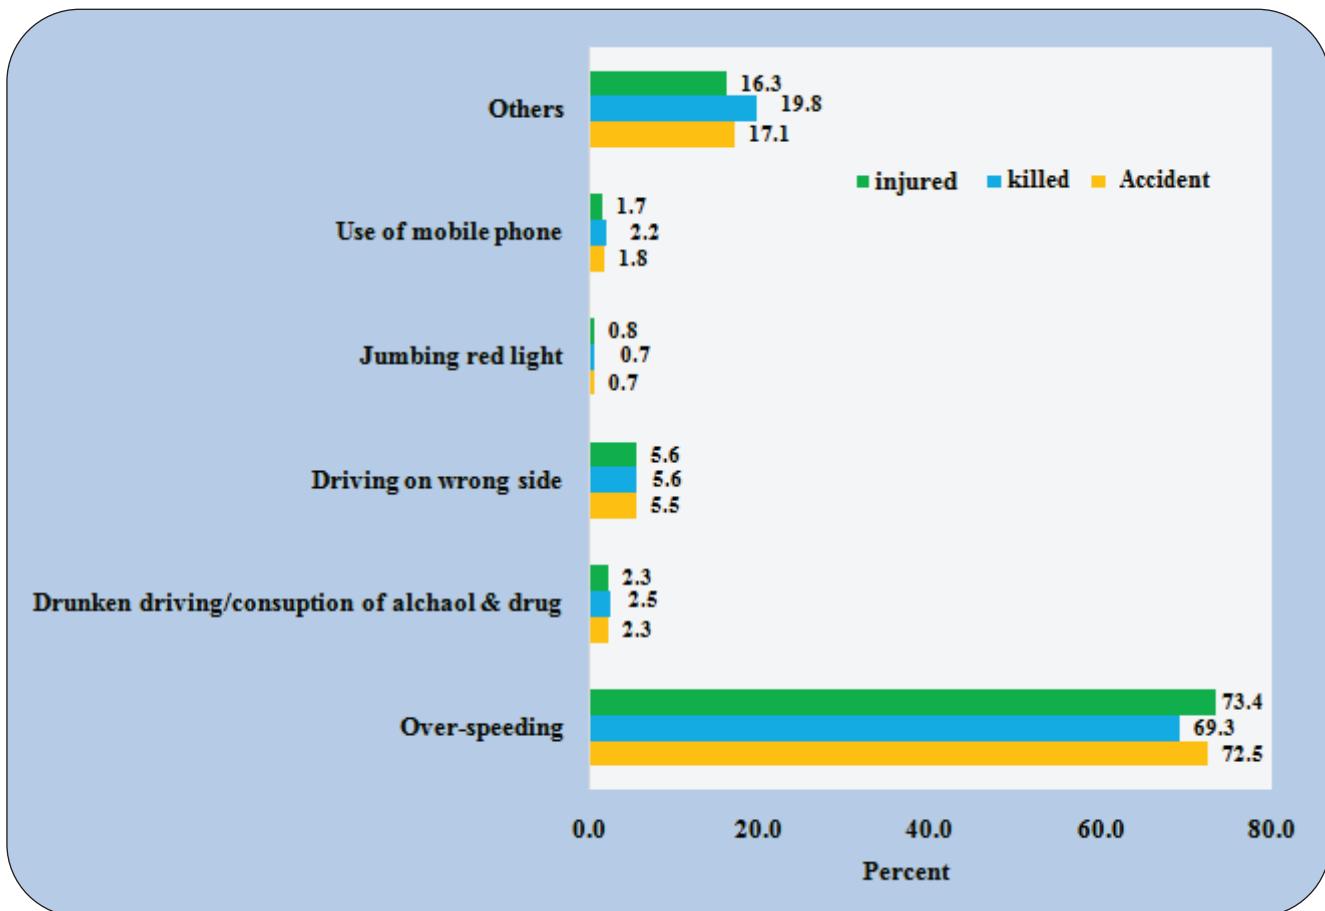

the perspective of road safety strategy, violations such as over speeding and driving on wrong side does not constitute human error alone, but also possible fault in road design. The approach opens up the scope for road engineering measures to address problems which are, *prima facie*, considered to be human error and enforcement issues.

4.5 Drunken driving/ consumption of alcohol & drugs, jumping of red light and use of mobile phones taken together accounted for 4.9 percent of total accidents and 5.4 per cent of total deaths. The others category which would include reasons like road environment, vehicular condition, etc. accounted for almost 17.1 percent of the accidents, 19.8 percent of accident related deaths and 16.3 percent of injuries. State wise details on various types of traffic rules violations for the year 2020 is presented in **Annexure 35**.

Table 4.1: Road Accidents by Type of Traffic Rules Violation

Category	2019			2020			% Change		
	Accidents	Fatalities	Injured	Accidents	Fatalities	Injured	Accidents	Fatalities	Injured

Chart 4.1: Road Accidents by type of Traffic Rules Violation during 2020

DRIVING WITHOUT VALID DRIVER LICENSE

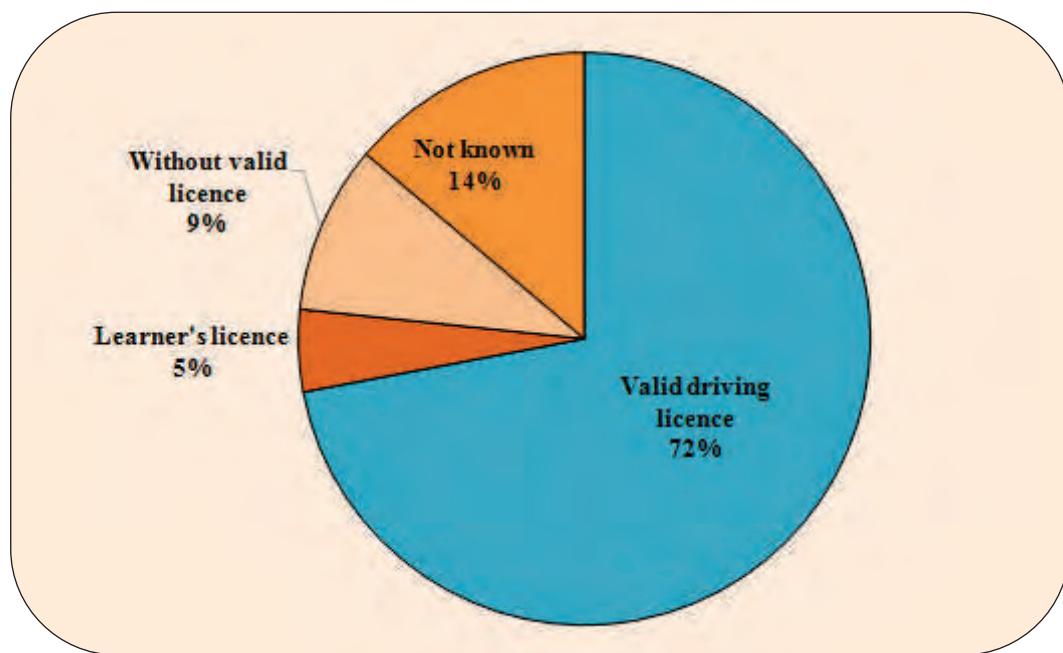

- 4.6 Vehicles driven by untrained and unqualified drivers are serious traffic hazard. Though the problem is basically an enforcement issue, it must also be addressed with better facilities and opportunities for training/skilling and evaluation/testing.
- 4.7 In 2020, road accidents involving drivers 'with learners licence and without valid licence together constitute 14.1 per cent of total accidents (Table 4.2). The number of accident cases involving drivers without valid driving licence has

decreased from 44,358 in 2019 to 34,854 in 2020, registered a decrease of 21.4 percent corresponding to same period last year. Even then the need for improved enforcement and also for establishment of quality driving schools and testing centres. Accidents involving learners license also has declined from 22,209 in 2019 to 16,977 in 2020, with growth rate dropped to 23.6 percent over 2019. State-wise details of road accidents classified by type of driving licence are given at Annexure-30.

Table 4.2: Road accidents by Type of License – (2018-2020)

Type of Licence	2018	2019	2020	% change in 2020 over 2019
Valid driving licence	3,45,799	3,23,793	2,63,689	-18.6
% share in total	74.0	72.1	72.0

Chart 4.2: Road accidents by type of license during 2020

NON-USE OF SAFETY DEVICES – HELMETS AND SEATBELTS

4.8 Non- usage of safety devices such as helmets and seatbelts do not cause accidents but are critical for averting fatal and grievous injuries in the event of road occurrence accidents. Helmets are mandatory for all motorists on two-wheelers, barring few exemptions. In 2020, 30.1 percent of death and 26

percent of injury caused due to non-usage of helmet. Similarly, more than 11 percent of death and injury caused due to non-usage of seat belt (Table 4.3). State-wise details of road accident victims classified by non-usage of helmets and Seat Belt respectively are at **Annexure 37 and 38**

Table 4.3: Number of persons killed and injured due to non-use of safety devices (helmets and seat belts) during 2020

II. ACCIDENTS BY ROAD ENVIRONMENT

4.9 The category of road environment includes (i) accidents happening in a particular geographical area (residential, institutional, market/commercial area,

etc.), (ii) those related to the type of road features including straight, curved, steep, etc., (iii) type of junction & type of traffic control, (iv) weather condition, etc.

ROAD ACCIDENTS CLASSIFIED BY TYPE OF NEIGHBOURHOOD

4.10 In 2020, road accidents by type of neighbourhoods compared to the previous year 2019 decreased by 18.5 percent, the number of persons killed by 12.8 percent and the number of injuries by 22.8 percent. All the three indicators of accidents, fatalities and injury show decline in the growth in 2020. Institutional area marked highest decline (-23.5% accident and -17.5 fatalities)) in number of accidents and fatalities followed by residential area (19.8% accidents and -

14.9% fatalities), as seen in the Table 4.4.

4.11 Residential area, institutional area and market/commercial area tend to have traffic congestion and hence, higher exposure to road accidents. The data for 2020, however, reveals 47.4 percent of accidents, 53.7 percent of death and 48.3 percent of injury occurred in open area, i.e., locations which normally do not have any human activities in the vicinity (Chart 4.3). Residential area is in the second

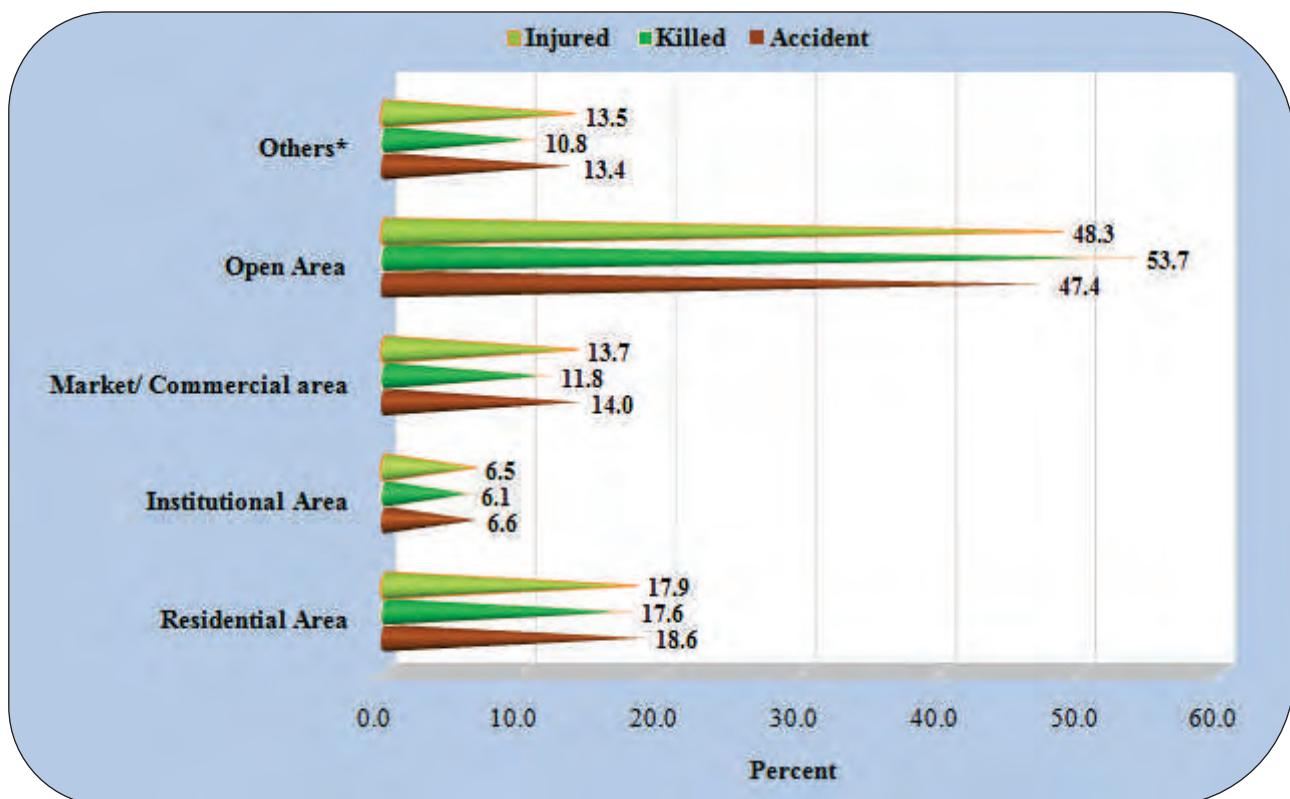

place with 18.6 per cent of total accidents and 17.6 per cent of total fatality and 18 percent of total injury. Market/commercial

area accounted for 14 per cent of total accidents and 12 per cent of fatality.

Table 4.4 Accident classified by type of neighbourhoods (Residential area, institutional area and market/commercial area, open area, etc.)

Area	Total accidents			Persons killed			Persons Injured

Total	4,49,002	3,66,138	-18.5	1,51,113	1,31,714	-12.8	4,51,361	3,48,279	-22.8

Chart 4.3 Accident classified by type of Neighbourhoods in 2020

4.12 Institutional area accommodating institutions such as schools, colleges, hospitals or large government establishments also tend to have traffic congestion on account of vehicular and pedestrian traffic. The share of accidents occurring in institutional area in the total accidents is lower than expected. It may be explained in terms of better

enforcement of traffic rules in residential, institutional and commercial areas. Open areas, normally, would be expected to have a lower enforcement presence, thereby prone to dangerous driving and traffic rules violations. **Annexure-19** gives State-wise figures of accidents by type road environment.

ROAD ACCIDENTS CLASSIFIED BY ROAD FEATURES

4.13 Road features such as sharp curves, potholes and steep grade tend to be accident prone because it takes skill, extra care and alertness to negotiate these road features. The data for 2020 indicate significant reduction in number of accidents, fatality and injuries (Table 4.5). Road accident statistics for 2020 reveals that the percentage share of individual collision types in the total accident are broadly similar to the respective percentage share in fatalities and injuries (Chart 4.4). Follow similar pattern of 2019 (refer Table 4.5).

percentage of road accidents, persons killed and injured (varying in the range of 64-65%) on these roads in 2020. The data, however, suggests that road safety measures must not be ignored in even straight road stretches which are normally considered to be less risky. Road sections where construction work were in-progress has accounted for 2.5 per cent of total accidents in 2020.

4.14 The data for 2020 reveals 65 per cent of accidents occurred on straight roads, whereas accidents on curved roads, pothole roads and steep grade together accounted for only 15.2 per cent of the total road accidents (Chart 4.4). Vehicle speed tends to be high on straight roads in open areas which corroborates the high

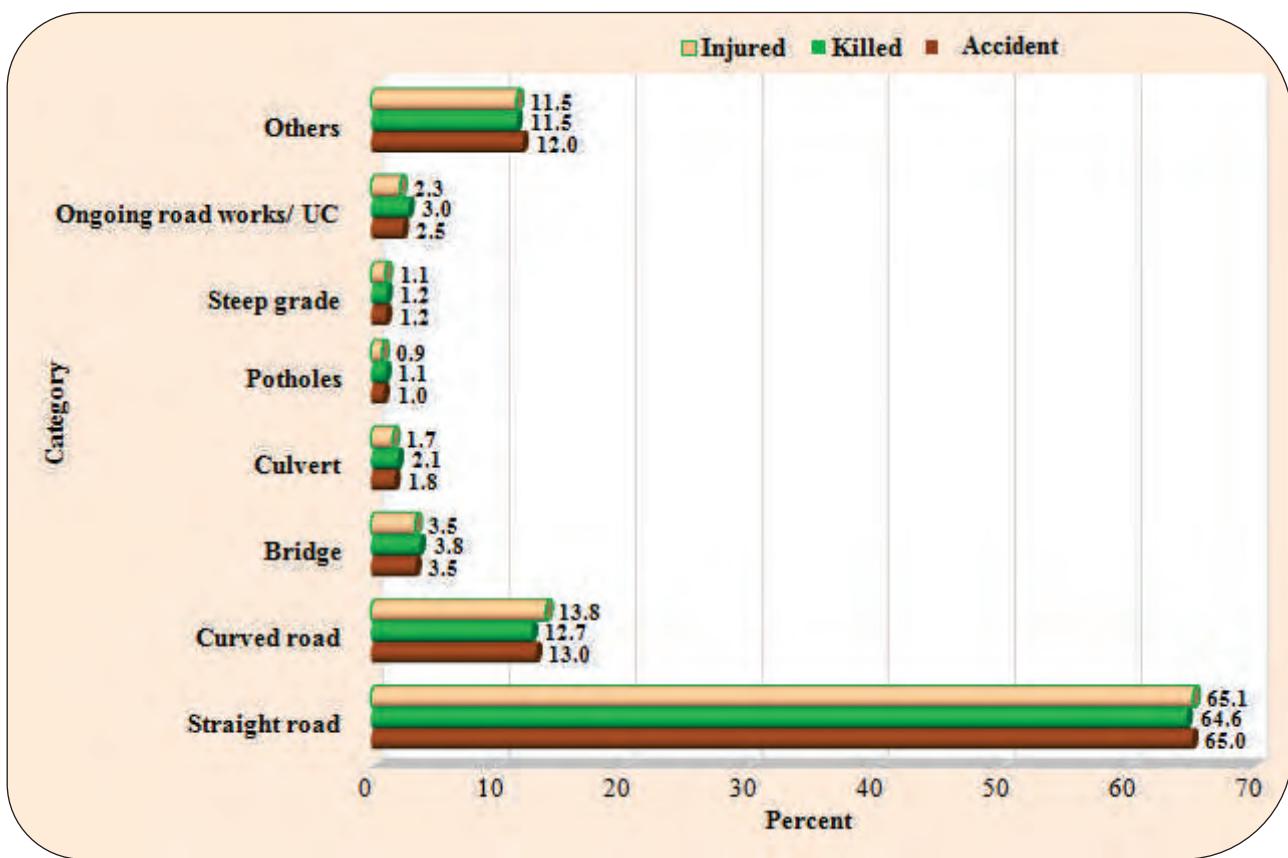

4.15 Even if there is a reduction in number of accident and death seen in table 4.5, the categories of the Curved Road, Culvert, Potholes and ongoing road works/ works under construction etc. need to be the focus of attention for the engineers maintaining these roads at the National/State and local levels with safety signage's installed at the appropriate spots. State-wise details are at **Annexure 22**.

Table 4.5: Accidents, Persons killed and Injuries by Road Feature 2019-2020

UC-Under Construction

ACCIDENTS BY ROAD JUNCTION TYPE & TRAFFIC CONTROL

4.16 Road junctions are points where traffic merges and hence are prone to accidents. However, the data furnished by States/UTs reveals only 27.4 percent of the accidents in 2020 took place at various types of junctions defined in the Table .4.6, almost 72.6 percent of the

accidents took place in the “Others” category (Table 4.6). Within the Junction's category, “T Junction” accounts for the largest share of accidents, persons killed and injured. The State-wise details of accidents by road junction type are at Annexure 23.

Table 4.6: Accident by Type of Road Junction at the All India : 2019-2020

TRAFFIC CONTROL

4.17 All junction types have different type of traffic control measures such as traffic light signals, police controlled signals, stop sign signals, flashing signals/blinkers and uncontrolled signals. The Table 4.7 reveals highest number of accidents, persons killed and injured took place on uncontrolled crossings which accounted

for 19.5% of the total accidents, 17.9% of the people killed and 18.4% of the people injured in 2020. Further, it is noted that the maximum reduction on junctions took place under the category of “Police Controlled” in the accident, persons killed and persons injured category.

ROAD ACCIDENTS BY WEATHER CONDITION

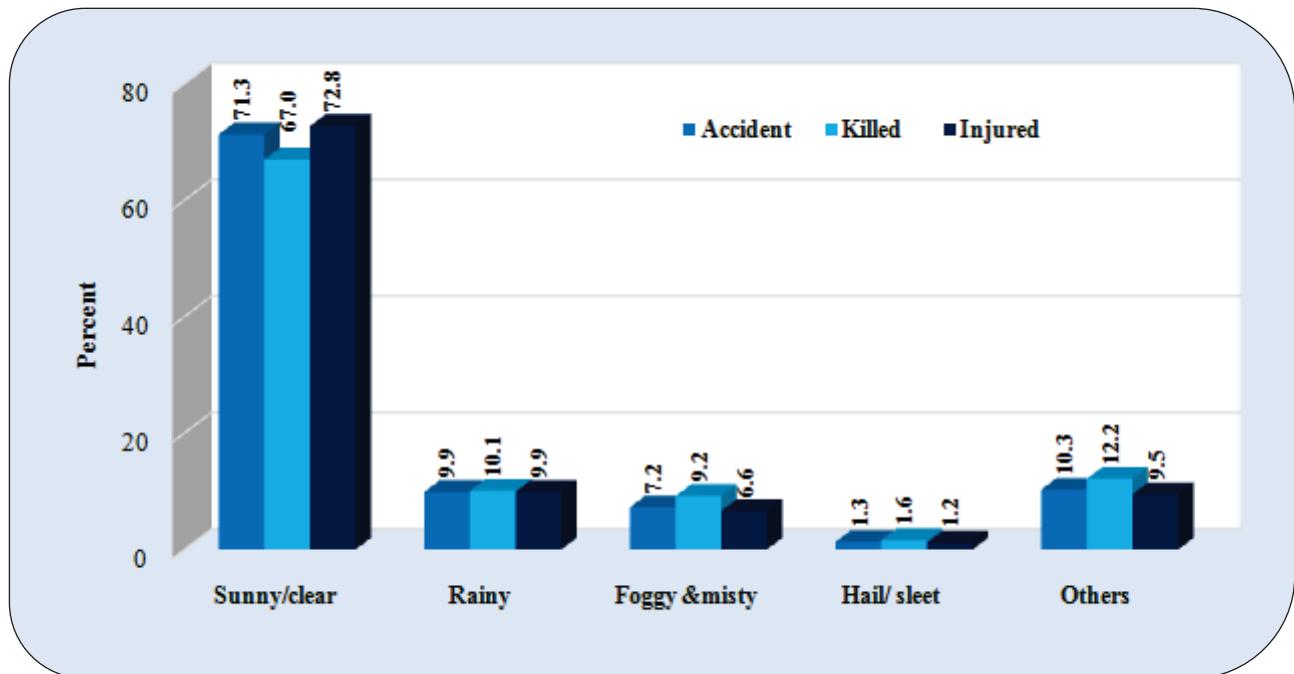

4.18 Weather condition affects road surface condition and the visibility of the motorist, thereby increasing the chances of mishaps. Adverse weather conditions such as heavy rain, thick fog and hail storms make driving riskier as visibility reduces and road surface gets slippery. There has been decline in number of accident, death and injury in all-weather condition except Hail/Sleet weather seen

in Table 4.8. The data of road accidents for 2020, however, show almost 3/4th of the accidents took place under sunny/clear weather (Table 4.8 and Chart 4.5). Accidents under adverse weather conditions such as rainy, foggy and hail/sleet accounted for only 18.4 per cent of total road accidents during 2020. The State-wise details of accidents by weather condition are at **Annexure 25**.

Table 4.8: Road Accidents by Weather Condition (2019-2020)

Weather Condition	No of Accidents			Persons killed			Persons injured

Chart 4.5: Road accidents by weather condition during 2020

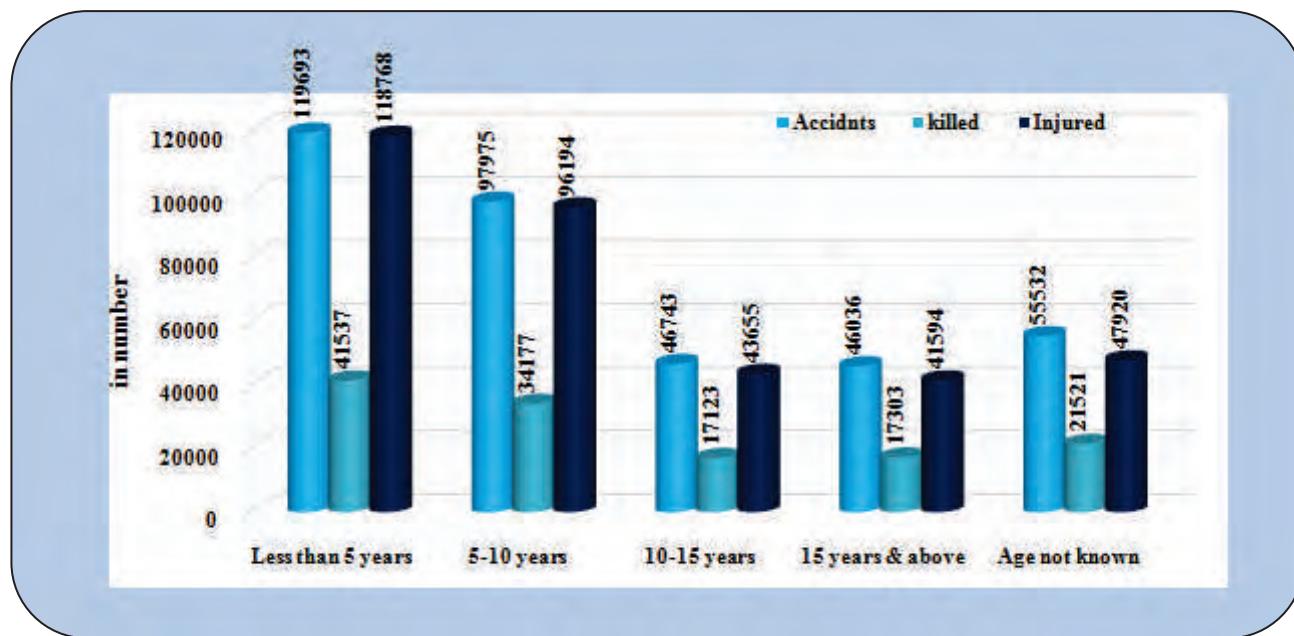

III. ACCIDENTS CLASSIFIED BY VEHICULAR CONDITION

4.19 Age of vehicles involved in road accidents is meant to throw some light on prevalence of aged or over-aged vehicles on the roads, accidents due to vehicle defects, assuming that old vehicles tend to have more frequent malfunction, and the number and share of old vehicles in

total accidents. In 2020, a total of 1,19,693 road accidents happened involving vehicles less than 5 years (refer Chart 4.6) and the highest number of death i.e. 41,537 happened involving vehicles less than 5 years State-wise distribution is given at Annexure 27.

Chart 4.6: Accidents classified according to Age of Impacting Vehicle during 2020

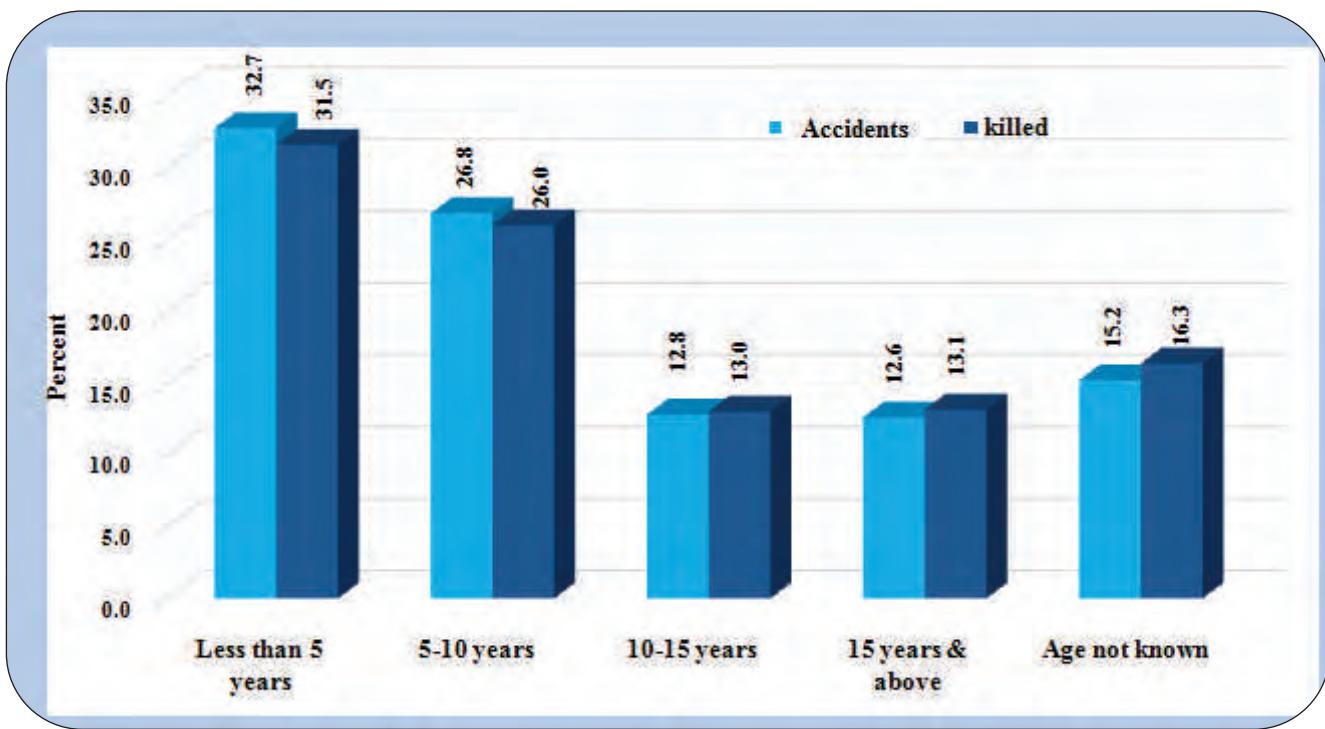

*Total may not tally due to non-reported of data from Chandigarh

4.20 Road accident statistics for 2020 reveals that the percentage share of individual vehicle type in the total accidents are broadly similar to the respective percentage share in fatalities and injuries. Vehicles with age below 10 years accounted for more than 50 percent of accident and death during 2020 (refer Chart 4.7). The vehicles with 10-15 years of age, accounted for 12.8 percent of accidents, vehicles over 15 years

accounted for 12.6 per cent of total accidents and vehicles with age not known accounted for another 15.2% of the total accidents in 2020 (Chart 4.7). Similarly, vehicles 10-15 years of age, accounted for 13 percent of accidents related deaths, vehicles of over 15 years accounted for 13.1 per cent of accidents related deaths and vehicles with age not known accounted for another 16.3% of the total accidents related deaths.

Chart 4.7: Accidents classified according to Age of Impacting Vehicle during 2020

OVERLOADING

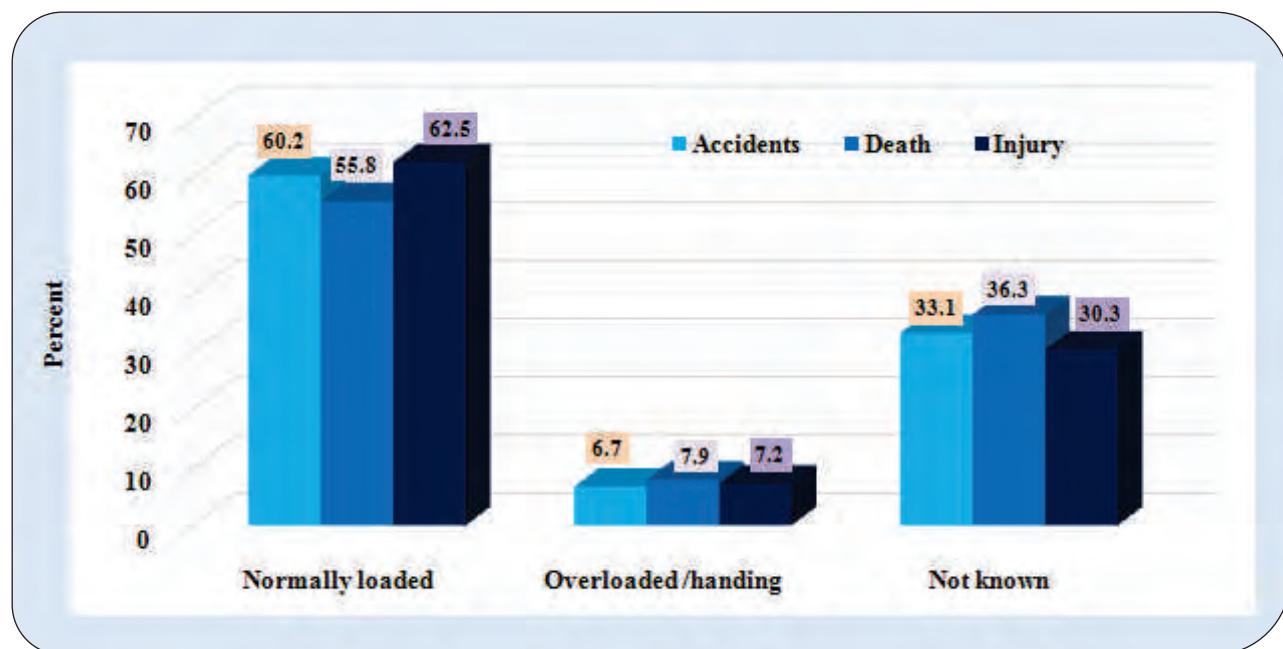

4.21 Overloaded vehicles and vehicles with loads protruding/hanging are road traffic hazard, risking accident for itself and also for other road users. Overloaded vehicles accounted for a share of 6.7 percent of total accidents, 7.9 percent of total killed and 7.2 percent of the injured in 2020 (Table 4.9 & Chart 4.8). Further,

it will be noted that accidents, accident related deaths, and injuries caused by overloading registered a decline of 32.1 percent in 2020 over 2019. State-wise figures of accidents classified by vehicular load conditions for the year 2019 are at **Annexure 28**.

Table: 4.9 Accidents classified according to Load Condition during 2019 and 2020

Load condition	No of accidents			Persons killed			Persons injured

Section - 5

ROAD ACCIDENT FATALITY

5.1. Expansion in the road network, surge in motorization and a rising population of a country contribute towards increasing numbers of road accidents, accident related injuries and fatalities. In India, road crashes claimed about 1.3 lakh lives and left more than 3.4 lakh people injured every year. As a result of concerted and coordinated road safety efforts, there was a decline in number of accidents and fatalities over the years. The number of road fatalities fell significantly during

2020, the main reason for this was lockdown imposed in the country and resultant strict containment measures aimed at reducing the spread of the COVID -19 viruses. Number of persons killed in accidents declined from 1,51,113 in 2019 to 1,31,714 in 2020 (Table 5.1), the number of road deaths decreased by 12.8 percent on average in 2020 compared to the average for the previous year 2019.

Table 5.1: Trends in the number of Accidents, Fatal Accident and number of persons killed (2005-2020)

Year	Total Accidents	Fatal Accidents	Persons Killed
2005	4,39,255	83,491 (19.0)	94,968
2006	4,60,920	93,917 (20.4)	1,05,749
2007	4,79,216	1,01,161 (21.1)	1,14,444
2008	4,84,704	1,06,591 (22.0)	1,19,860
2009	4,86,384	1,10,993 (22.8)	1,25,660
2010	4,99,628	1,19,558 (23.9)	1,34,513
2011	4,97,686	1,21,618 (24.4)	1,42,485
2012	4,90,383	1,23,093 (25.1)	1,38,258
2013	4,86,476	1,22,589(25.2)	1,37,572
2014	4,89,400	1,25,828(25.7)	1,39,671
2015	5,01,423	1,31,726(26.3)	1,46,133
2016	4,80,652	1,36,071 (28.3)	1,50,785
2017	4,64,910	1,34,796(29.0)	1,47,913
2018	4,67,044	1,37,726(29.5)	1,51,417
2019	4,49,002	1,37,689(30.7)	1,51,113
2020	3,66,138	1,20,806(33.0)	1,31,714

Figures in parentheses are the percentage shares in the total of respective columns

LONG RUN TREND IN ROAD ACCIDENT FATALITIES

5.2. Despite some marginal fluctuations, the long run trend of number of persons killed in road accident has largely stable increasing over small margins till 2019 (Chart 5.1). Category wise distribution of fatalities across various category of road reveals State Highways record a comparably less number of fatalities (about 25 percent), whereas National

Highways with 2.1 percent of total road network in the country accounts for more than 36 percent of accident deaths in 2020, which has been increasing over the years except for three years 2012, 2013 and 2020. Other Roads with 95 percent of road network in the country shares more than 38 percent of accident deaths in 2020 (refer Table 2.3)

Chart 5.1: Trends in number of Persons Killed in road accidents

NH- National Highways, SH- State Highways, OR-Other Roads

FATAL ROAD ACCIDENT BY CATEGORY OF ROADS

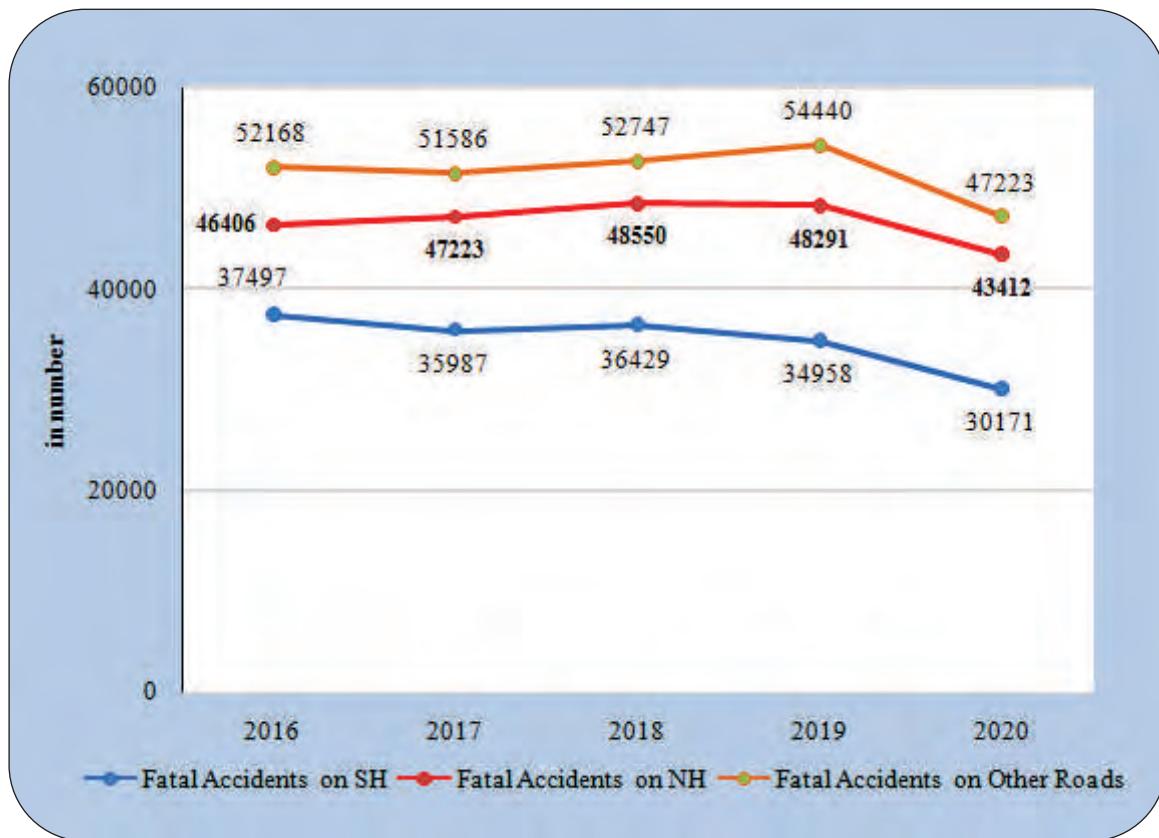

5.3. A road accident may cause loss of life/lives or grievous injury or minor injury or non-injury to road-users. An accident which resulted in death of one or more person is a fatal accident. In 2020,

out of 3,66,138 road accidents, 1,20,806, (33%) were fatal accidents (Table 5.1). The trend of fatal road accidents by category of road presented in the Chart 5.2 shows less number fatal accidents

took place on State Highways during 2016 to 2020. Trends of total number of fatal accidents on National Highways and Other Roads have remained largely stable

fluctuating over very small margins over the years. There has been a significant decline in fatal accidents during 2020 recorded by all categories of roads.

Chart 5.2: Trends in number of Fatal Accidents by category of roads (2016-2020)

FATALITY RATE

5.4. Fatality rate is used to explain road accidents relative to vehicular population in the country. It is measured by the number of road accidents fatalities (persons killed) per 10,000 vehicles. National average accident fatality rate has been declining over the years and remained at 5.1 in 2020 (Chart 5.3).

5.5. The fatality rate is useful for comparing road safety across States, particularly those with similar levels of motorization. Comparing the number of road fatalities in relation to the number of vehicle-kilometers driven (total distance

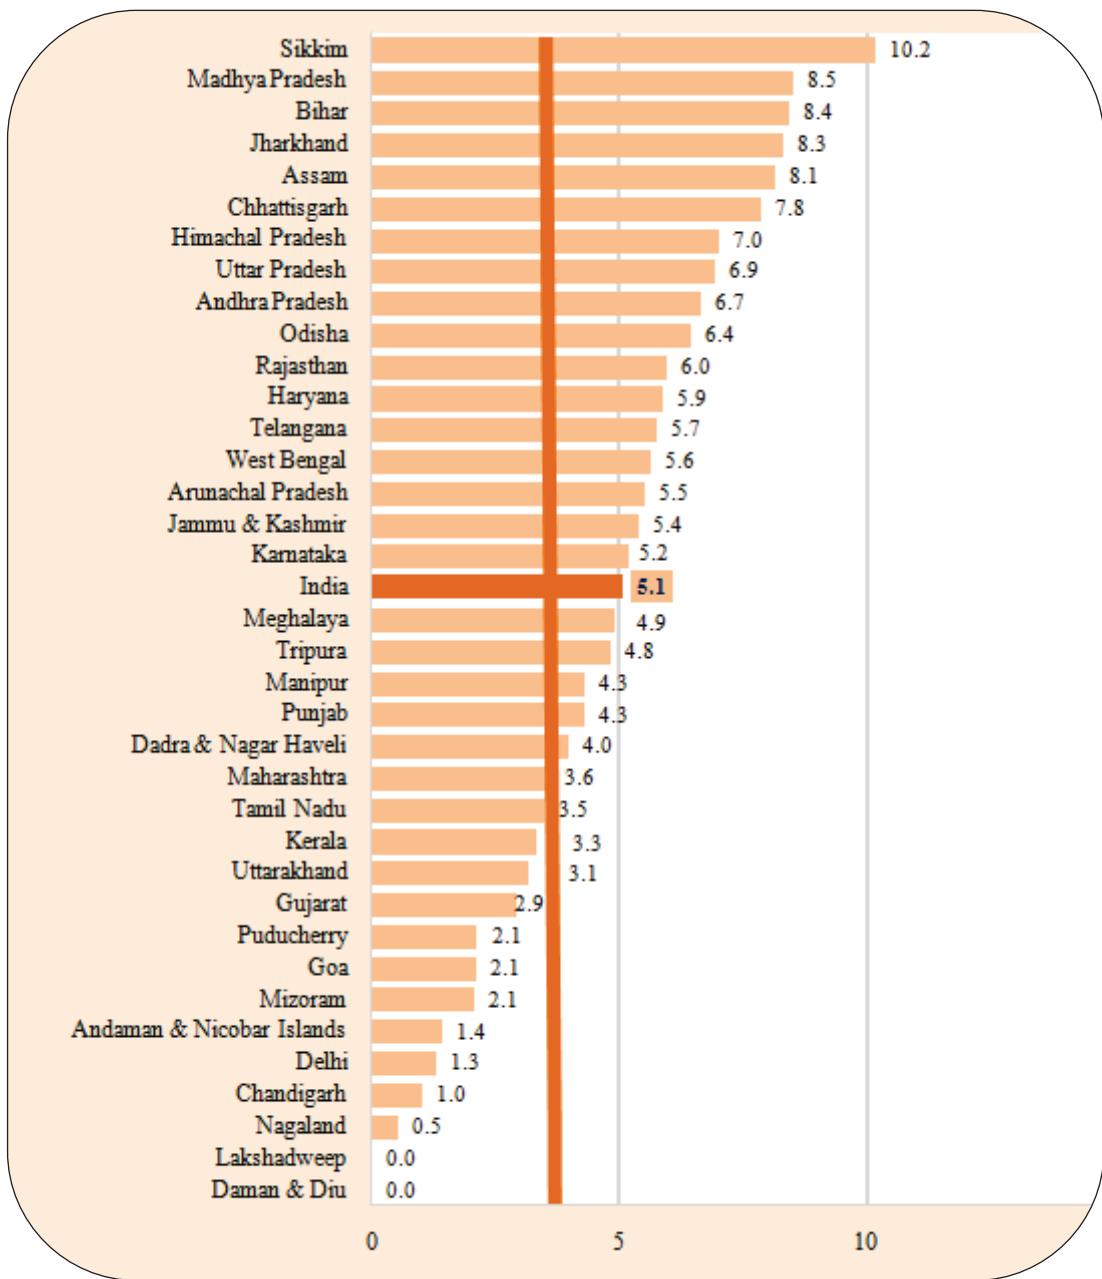

travelled by motor vehicles) provides a better indicator for assessing the risk of travelling on a given road network. The number of traffic deaths in relation to the number of registered vehicles sometimes serve as an approximation for the fatality rate in the absence of data on distance travelled.

5.6. Road traffic-related fatality rate differs among the States (Chart 5.3). During 2020, Sikkim (10.2) recorded highest fatality rate followed by Madhya Pradesh (8.5) and Bihar (8.4). About fifty percent of States have fatality rate above

National average of 5.1 during 2020. Union Territories recorded fatality rate lower than National average. It may be noted that the States like Kerala (3.3), Tamil Nadu (3.5), Gujarat (2.9) and Maharashtra (3.6) have larger share in total accident and persons killed in 2020, however, recorded fatality rate lower than the National average. Generally, States with larger share of road network and registered motor vehicles accounted

for relatively higher fatality rate. However, Maharashtra has largest roads network (626491 Km with 11.79 % share in 2018) and highest number of registered motor vehicles in the country (35.39 Million, 12% in 2019), recorded fatality rate 3.6, which is lower than national average. In 2020, majority of the States recorded less number of accidents when compared to 2019.

Chart 5.3: State/UT wise distribution of Fatality Rate during 2020

AGE PROFILE OF ROAD ACCIDENT VICTIMS

5.7. During 2020, less number of persons killed in all age groups as compared to 2019. Age profile of fatal road accident victims during the last three years presented in Table 5.2 reveals road accident victims largely constitute young people in the age groups of 18 - 25, 25 - 35 and 35 - 45 and this age profile together accounted for around 69 percent of accident deaths in last three years (Chart 5.4). Road accident victims largely constitute young people in the productive age underscoring major implication on economic cost of road accidents, apart from their emotional and psychological impact. Changes in demographic composition, coupled with

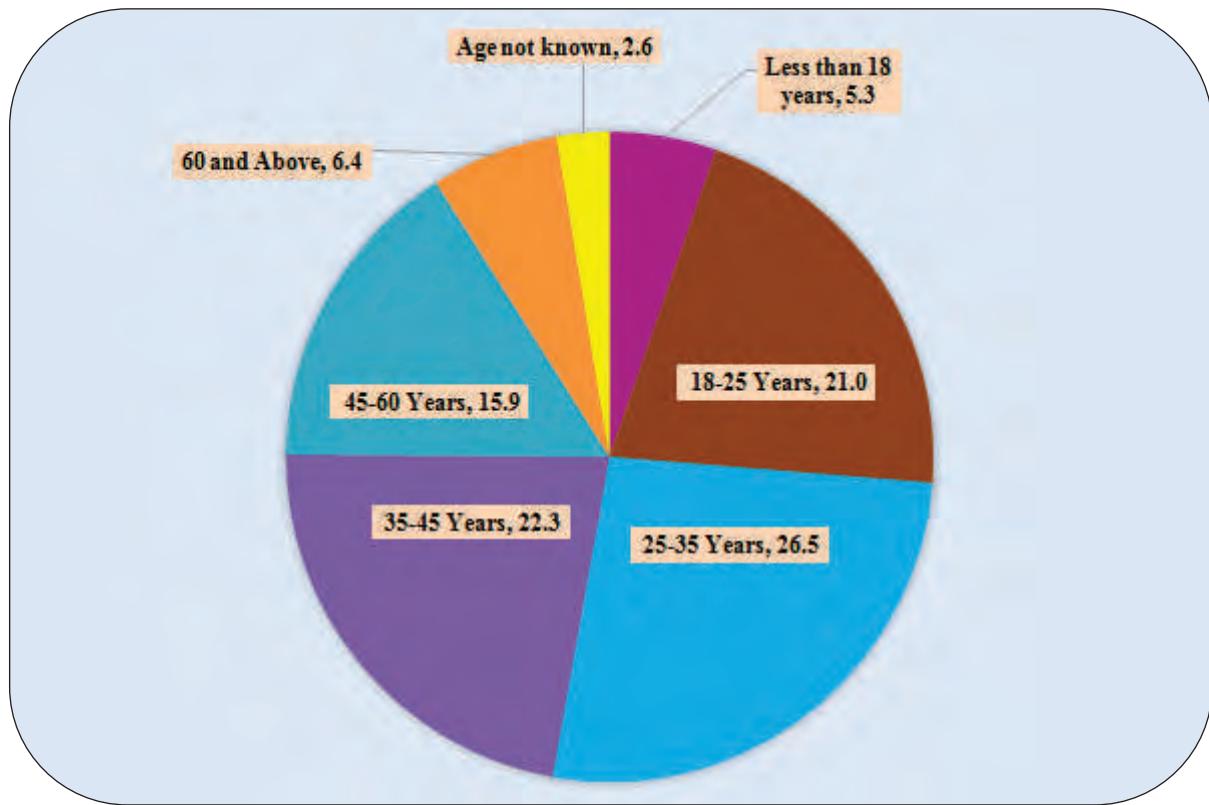

greater mobility among younger age group, result in a higher proportion of younger age groups and a lower proportion of senior citizens among traffic fatalities.

5.8. The working age group of 18 - 60 accounted for 85.7 percent of total road accident deaths (Chart 5.4) in the country. Road deaths in the age group less than 18 fell by almost one third (37.3%) in 2020 on average, implies the road environment is becoming safer for children. The reduction for the age group 18-25 years was of 16.8% (Table 5.2). State-wise details are provided at **Annexure 30**.

Table 5.2: Age profile of Fatal Road Accident victims during 2018 to 2020

Age-group	Number of Persons killed			% change in 2019 over 2018	% change in 2020 over 2019

Chart 5.4: Age profile of Road Accident victims during 2020 (in percent)

GENDER AND AGE PROFILE OF FATAL ROAD ACCIDENT VICTIMS

5.9. The gender-wise comparison of road accident deaths for the year 2020 reveals that total number of males and females killed were 1,14,933 (87.3%) and 16,781 (12.7%) respectively. However, significant decline occurred in number of male and female killed in 2020 as compared to 2019. The gender-wise

distribution of fatal road accident victims in 2020 shows largest number of death recorded in young people's age group i.e. 18-45. In this age group 18-45, number of male killed was 81,443 (61.8 % of total) and female killed was 10,495. State-wise, gender-wise breakup is at **Annexure 30.**

Table 5.3: Gender-wise age profile of Fatal road accident victims during 2018 to 2020

Age-group	2018		2019		2020		% -age change in 2019 over 2018		% -age change in 2020 over 2019

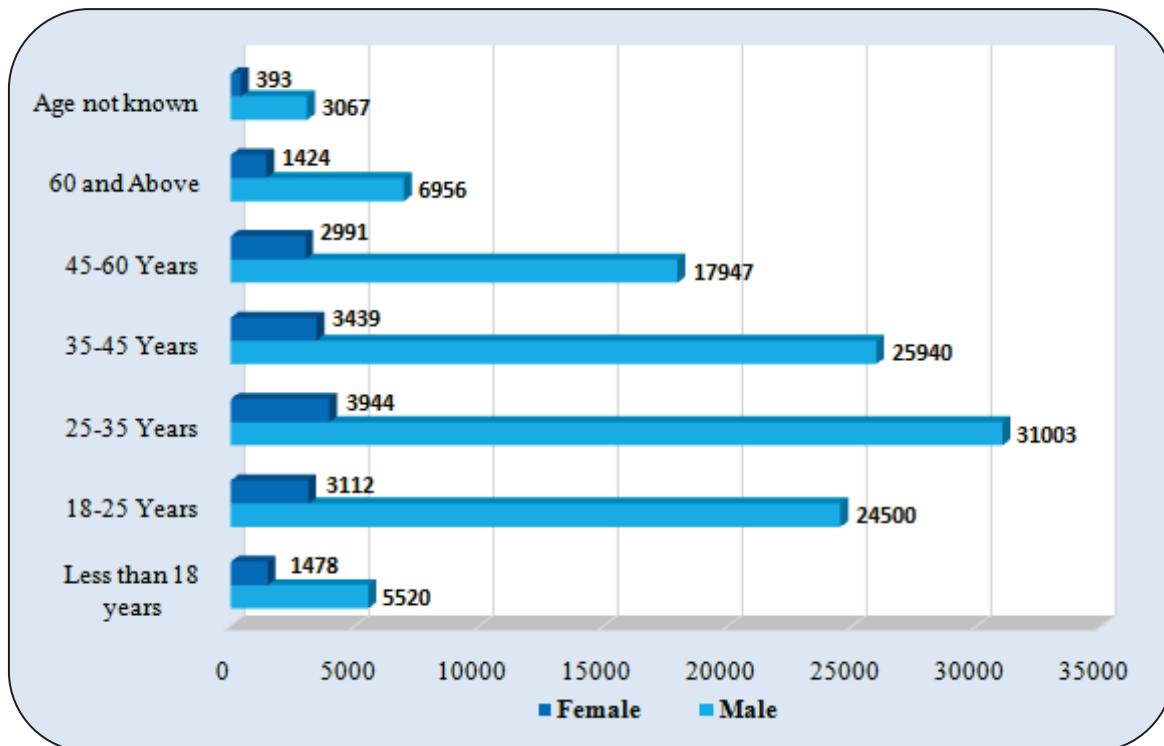

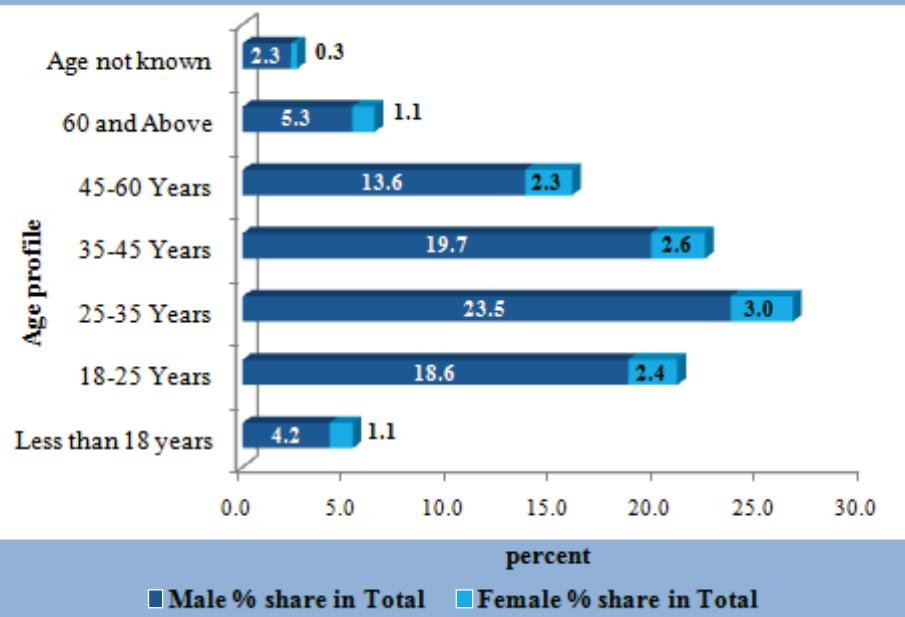

Chart 5.6: Gender-wise age profile of fatal road accident victims in 2020

GENDER-WISE AGE PROFILE OF DRIVERS KILLED

5.10. The gender-wise comparison of total drivers killed during the year 2020 presented in the Chart 5.7. A total of 56,334 (97.3%) Male and 1551 (2.7%) female drivers were killed due to road accident in 2020 (refer to **Annexure 31**). Age wise profile of fatalities reveals 42,923 (74.2%) Male and 1179 (2%) Female drivers were killed in the young

age group of 18-45. This highlights the need for setting up of Driving Training Centre (DTC) to provide quality training to commercial vehicle drivers to improve road and environment safety and strengthen overall mobility on roads. State-wise, gender-wise breakup of drivers killed in road accidents is given at **Annexure 31**.

Chart 5.7: Gender-wise age profile of total drivers killed during 2020

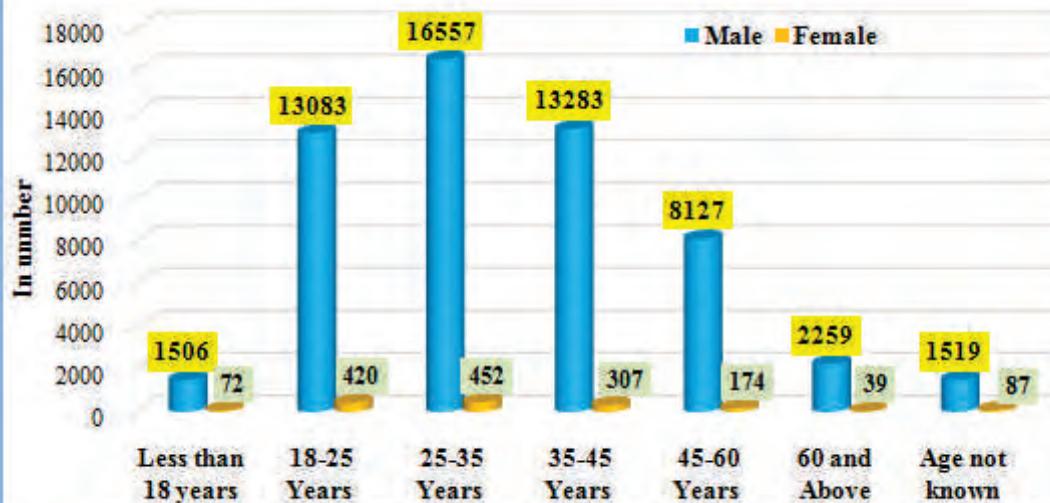

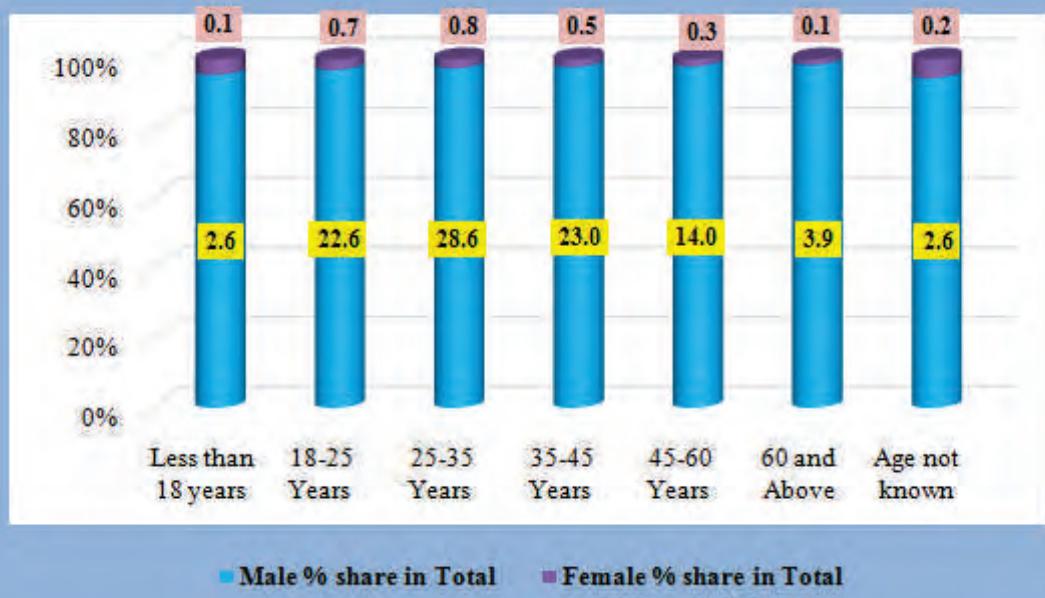

Chart 5.8: Gender-wise age profile of total drivers killed during 2020

GENDER-WISE AGE PROFILE PASSENGERS KILLED

5.11. The gender-wise comparison of total passengers which were killed during the year 2020 presented in the chart 5.9. Total number of 35,552 (77%) Male and 10,624 (23%) female passengers were killed due to road accident in 2020 (refer to **Annexure 32**). Chart 5.9 reveals

among the young people's age group of 18-45, total number of 25,019 (54.2%) killed were male passengers and 7070 (15%) killed were female passengers. State-wise, gender-wise breakup of passengers killed in road accidents is at **Annexure 32**.

Chart 5.9: Gender-wise age profile of total Passenger killed during 2020

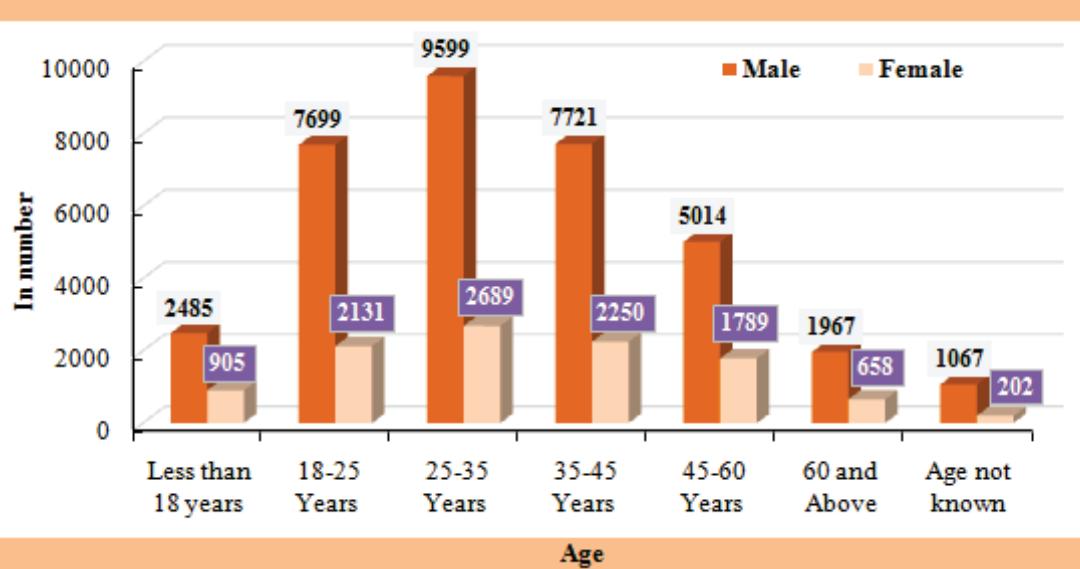

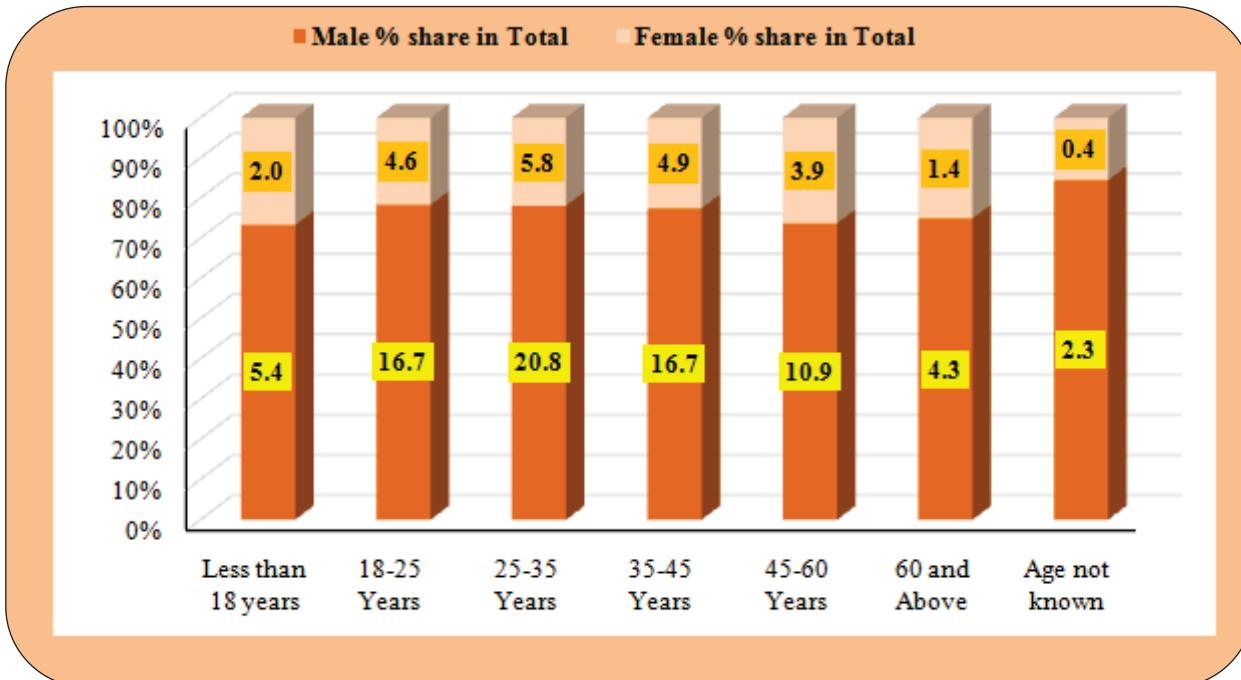

Chart 5.10: Gender-wise age profile of total Passengers Killed during 2020 (percent share)

GENDER-WISE AGE PROFILE OF PEDESTRIANS KILLED

5.12. The gender-wise comparison of total pedestrians killed during the year 2020 presented in the chart 5.11. Total number of 19,188 (81.6%) Male and 4299 (18.4%) female pedestrians were killed due to road accident in 2020 (refer to

Annexure 33). Chart 5.11 show 10,976 (46.7%) Male and 2037 (8.7%) Female pedestrians were killed in the young age group of 18-45. State-wise, gender-wise breakup of pedestrians killed in road accidents is at **Annexure 33.**

Chart 5.11: Gender-wise age profile of total Pedestrians killed during 2020

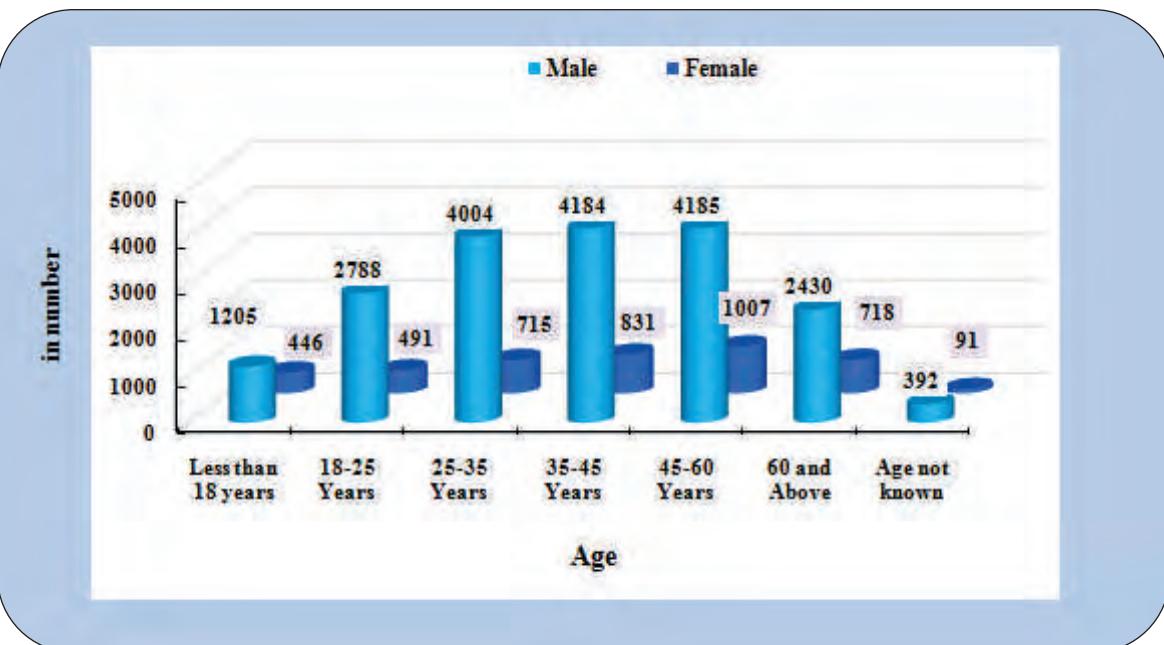

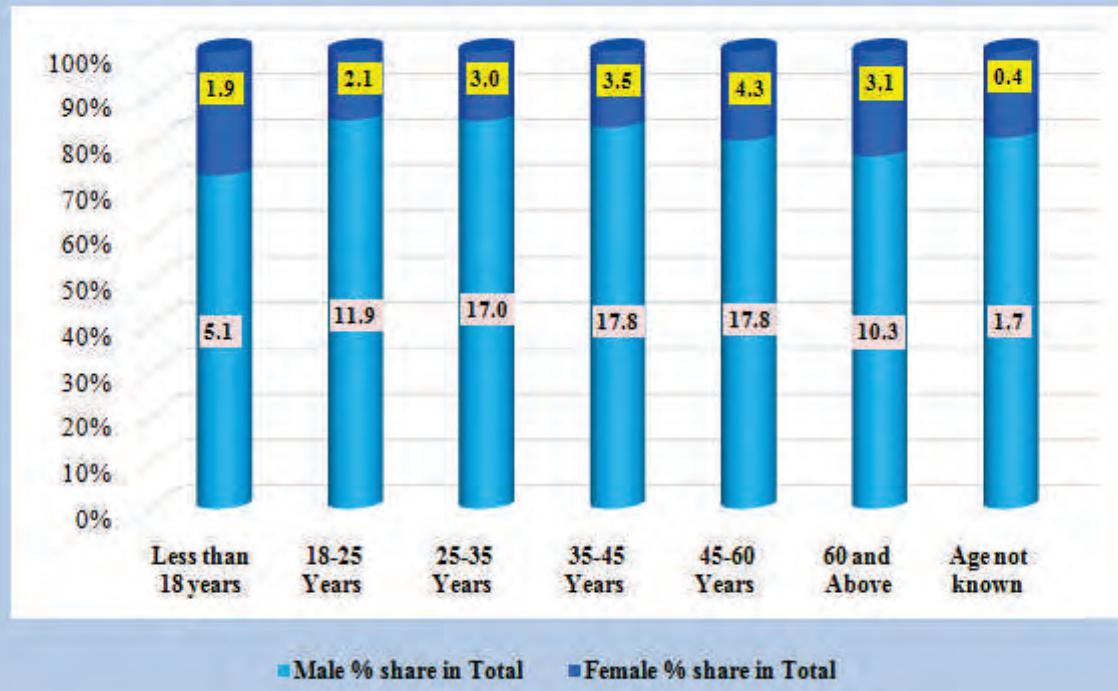

Chart 5.12.: Gender-wise age profile of total Pedestrians Killed during 2020 (percent share)

PERSONS KILLED IN ROAD ACCIDENTS IN TERMS OF ROAD USER CATEGORIES

5.13. A road-user is one who uses a road for movement or transportation as a pedestrian or cyclist or motorist (driver and passenger). Vehicle occupants benefit most from the reduction in road deaths. Data on road-user wise accident victims helps in recognising vulnerable categories which helps the authorities to put special attention on the most vulnerable section.

5.14. The data in Table 5.4 reveals for the second consecutive year in 2020, amongst the road user categories, two-wheelers with a share of 43.5% constitute the largest number of road accident deaths (57,282). Cars, taxis, Vans & LMVs are next highest contributor with a share of 13.7 percent though their absolute numbers and

percentage share in the total road user category has declined as compared to 2019.

5.15. The total number of pedestrians killed on road accidents fell from 25,858 in 2019 to 23,483 in 2020, registered a decrease of 9.2 per cent compared to same period last year. Further, Pedestrians accounted for 17.8% and Cyclists contributed to another 3.2% of the Road Users those are killed in 2020.

5.16. Truck and Lorries account for a share of 7.5 percent in total person killed in 2020 with its share and as well as the absolute numbers of deaths having declined in 2020 as compared to 2019. Similarly, both in absolute and relative terms, death due to Buses declined in 2020 compared

to 2019 whereas other motor vehicles (including e-rickshaw) depicted marked increase in 2020 compared to 2019.

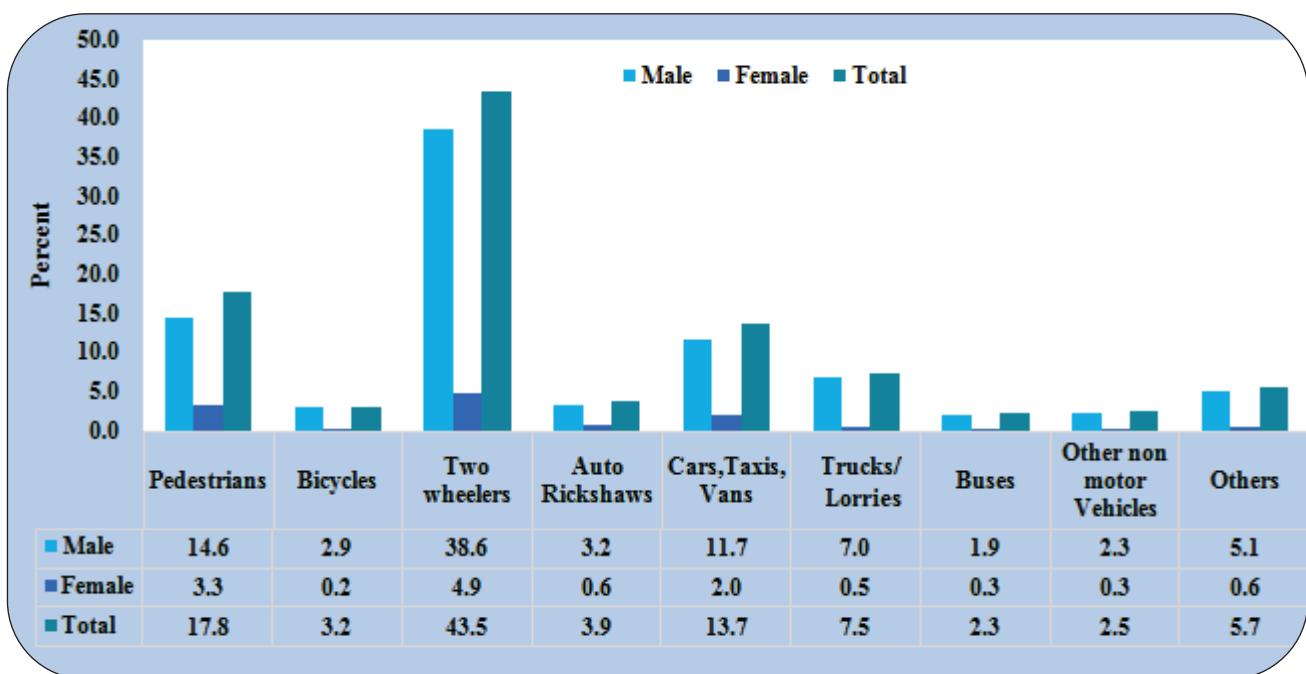

5.17. Gender wise profile of persons killed in road accident in terms of road user category is presented in the Chart 5.13,

reveals two wheelers have the highest share (43.5%) followed by pedestrians (17.8%) and cars, taxis and vans (13.7). The absolute and relative share of male killed is higher than that of female in all road user categories.

Table 5.4: Comparison of Persons killed in road accidents in terms of road user categories during 2018 to 2020

Road-user category	Persons killed 2018	Persons killed 2019	Persons killed 2020	% Change 2020 over 2019
Pedestrian	22,656	25,858	23,483	-9.2

Chart 5.13: Gender wise profile of Persons killed in road accidents in terms of road user categories during 2020 (percentage share)

5.18. This new format has been introduced from 2019 onward, collecting information on persons killed in accidents. The 2018 Accident Report had earlier provided accident/fatality/injury report only by type of impacting vehicle, wherein impacting vehicle meant the “Crime Vehicle”. However, we received a feedback that users were not clear by what was meant by impacting vehicles and therefore, a 9X9 matrix detailing the various categories of accident related deaths by crime vehicle and victim vehicle category have now been provided.

5.19. According to Table 5.5, the number of Pedestrians killed by different categories of crime vehicles in 2020 was 23,477 which is 17.8 percent of the total road accident deaths. The leading three crime vehicles in terms of share of pedestrians

killed are Two wheelers (18.3%), Cars, Taxis, Vans & LMV (17.5%) and Auto Rickshaws (16.8%)

5.20. The number of victims on two wheelers killed were 56,873 which is around 43.2% of the total road accident deaths. In terms of percentage share, the three leading crime vehicles responsible include two wheelers (56.3%), Cars, Taxis, Vans & LMV (40.9%) and Trucks & lorries (39.5%).

5.21. The table above also reveals that as many as 17,873 occupants of cars, taxis, Vans and LMV which is 13.6 percent of the total got killed in 2020 with collision with cars, taxis, Vans and trucks accounting for a share of 22.5 percent followed by Trucks/Lorries (15.2%) and Buses (16.8%).

**Table 5.5: Persons killed in Accidents Classified by the type of impacting vehicles
(Crime Vehicles by Victim vehicles) in 2020**

Section - 6

Inter State Comparison

- 6.1. This section examines the performance of States/UTs in respect of number of road accidents and number of persons killed during the calendar year 2020. The absolute number of road accidents and fatalities across States and Union Territories (UTs) varies widely and the variations are roughly in line with the

size of States/UTs in terms of population and economy relative to the national economy. Significant decline in the number of road accidents, fatalities and injuries for the country as a whole marked in 2020 over 2019 on account of significant reductions achieved by majority of the States/UTs.

State wise Profile of Road Accidents

- 6.2. Total number of accident declined from 4,49,002 in 2019 to 3,66,138 in 2020, registered a decline of 18.5 percent on an average over same period last year. In the chart 6.1, all States/UTs other than Nagaland, Dadra Nagar Haveli and Lakshadweep, recorded less number of accidents in 2020 compared to same period in 2019.
- 6.3. On States' front, Tamil Nadu (20.5 %), Kerala (32.2%), Uttar Pradesh (19.6%), Rajasthan (18.6%) and Maharashtra (24.2%) are amongst the top States recorded higher number of accident in

2020. However, in these States, decline in the growth rate of accidents was higher than that of the national average of 18.5 percent (Chart 6.2 refer to). In Madhya Pradesh (10.7%), Andhra Pradesh (11.3%), Telangana (11.1%) and Karnataka (15.9%), total number of accidents recorded was high, however, decline in the growth of accident was lower than all India average of 18.5 percent. Details of State wise distribution of accidents is given at Table 6.1 and Annexure 2.

Chart: 6.1 State wise distribution of number of accidents during 2019 and 2020

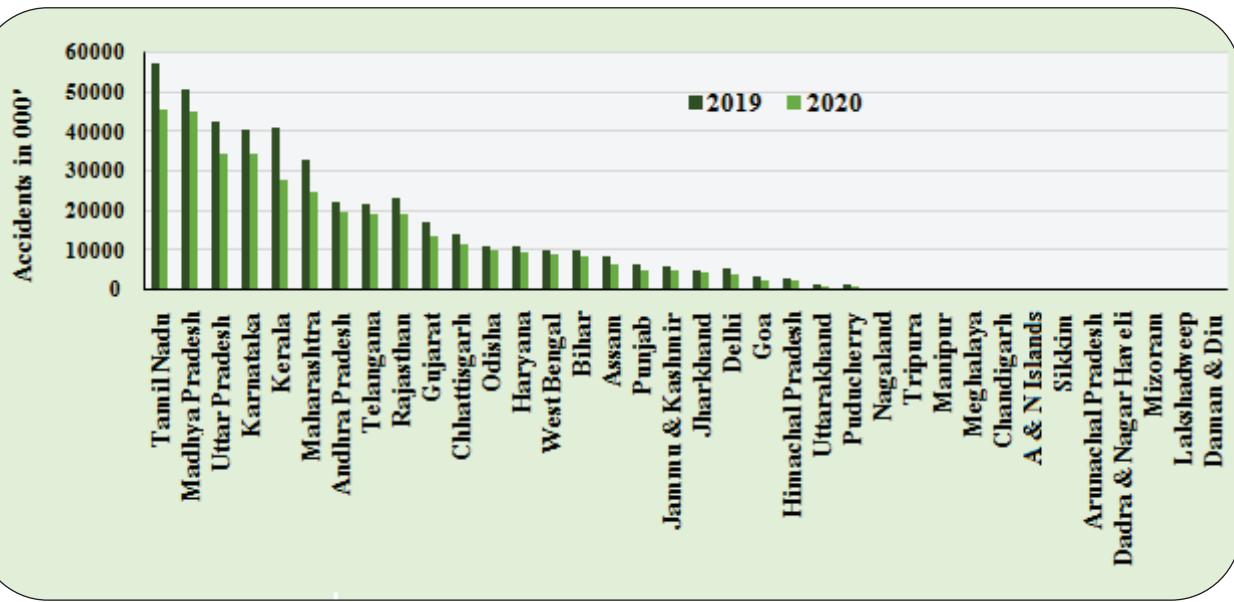

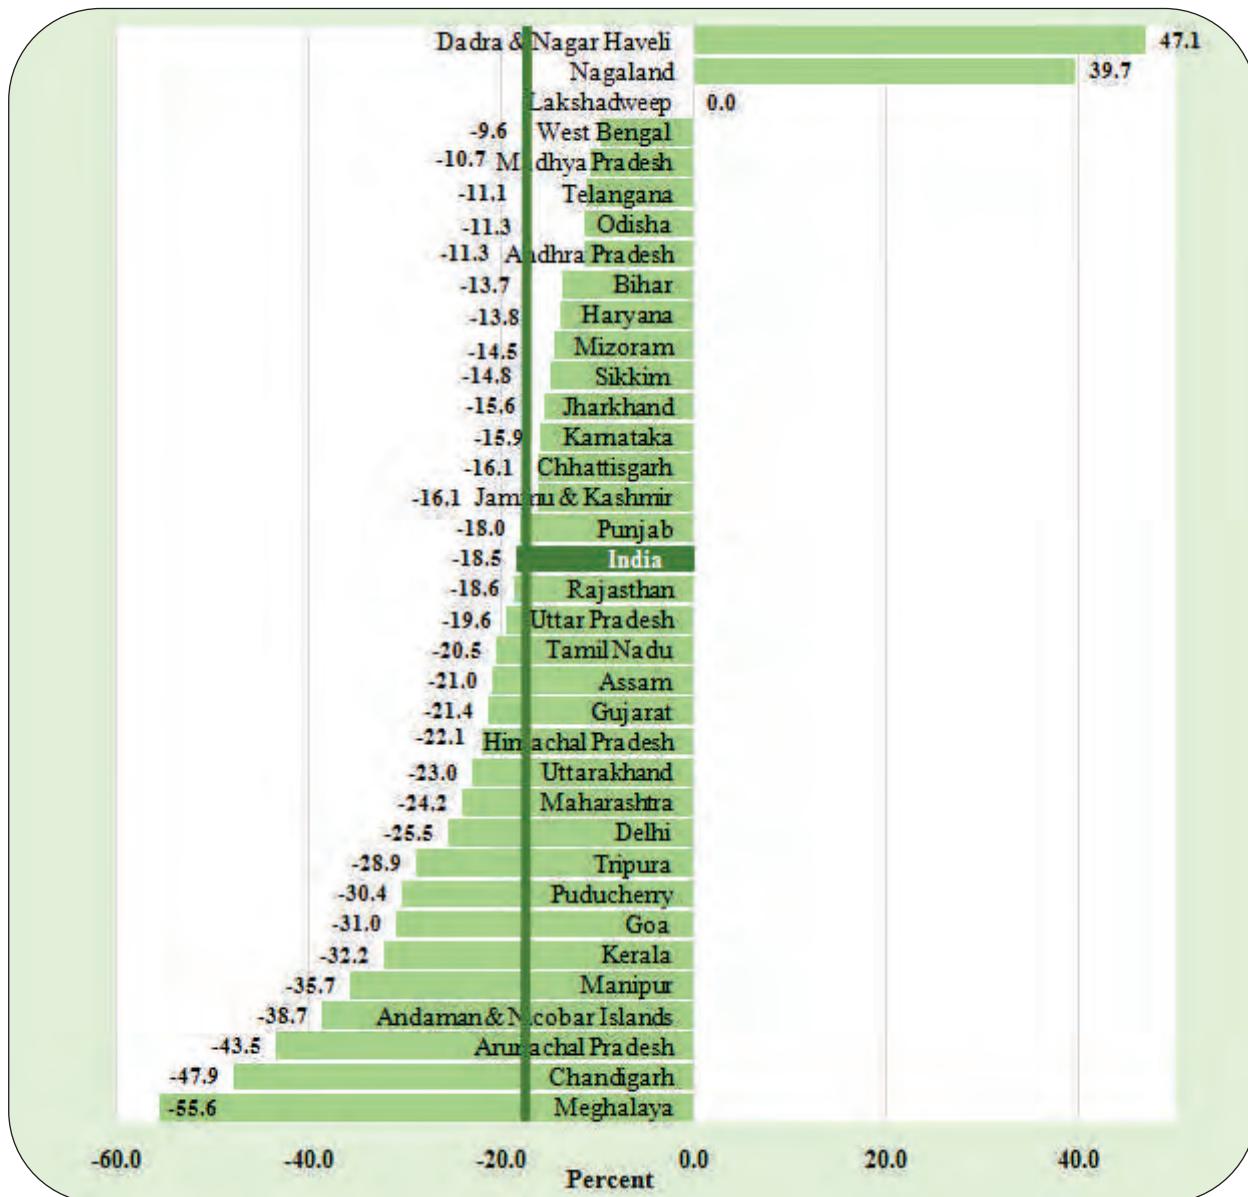

Table: 6.1 State wise distribution of number of accidents during 2016 to 2020

Chart 6.2: Percent share of States/UTs in reduction of road accidents in 2020

Top 10 States in Number of Accident in 2020

6.4. Top 10 States presented in the Table 6.2 has been selected based on the number of accident reported by States/UTs in 2020. The same set of States which constituted top in 2018 and 2019 constitutes the top 10 States in 2020. Tamil Nadu maintains its top position for the third consecutive year in 2020 with 45484 (12.4%) accidents followed by Madhya Pradesh with 45,266 (12.36%), Uttar Pradesh with 34, 243(9.4%) Karnataka with 34,176, (9.3%) and Kerala with 27,877 (7.6%) accidents.

6.5. Within the group, Andhra Pradesh, Karnataka and Rajasthan improved their positions in 2020 relative to 2019, whereas the positions of Kerala, and Telangana became worse. Maharashtra, Madhya Pradesh, Tamil Nadu and Gujarat retained their position in 2020 (Refer Table 6.1). These top ten States listed in the Table 6.2 accounted for a combined share of 77.4 % of total road accidents in India during 2020. Details on State/UT wise distribution of total road accidents is at **Annexure 2**.

Table 6.2: Number of road accidents in top 10 States during 2017-2020

States	2017	% share in total	2018	% share in total	2019	% share in total	2020	% share in total
Tamil Nadu	65,562	14.1	63,920	13.70	57,228	12.70	45,484	12.40
Madhya Pradesh	53,399	11.5	51,397	11.00	50,669	11.30	45,266	12.40
Uttar Pradesh	38,783	8.3	42,568	9.10	42,572	9.50	34,243	9.40

Micro analysis of Top 10 States

6.6. Top 10 States presented in the Table 6.2 has been selected based on the number of accident reported by States/UTs in 2020. Chart 6.3 summaries the trend in growth of accidents during the 2016-2020. During the last four years i.e. 2017-2020, Top 10 States have shared more than 77 percent of total road accidents in India (Table 6.2), however, show a decline in the growth of accident since 2018 except

for Rajasthan. In Andhra Pradesh and Telangana, number of accident and year on year growth show declining trend after 2017 and incidence of accident decreased significantly in Rajasthan (-18.6%) in 2020. Gujarat and Maharashtra recorded a marked decline in the number of accident both in absolute and relative terms during the period 2017 to 2020 (refer Chart 6.3).

Chart 6.3: Trends in Road accident in top 10 States during 2020

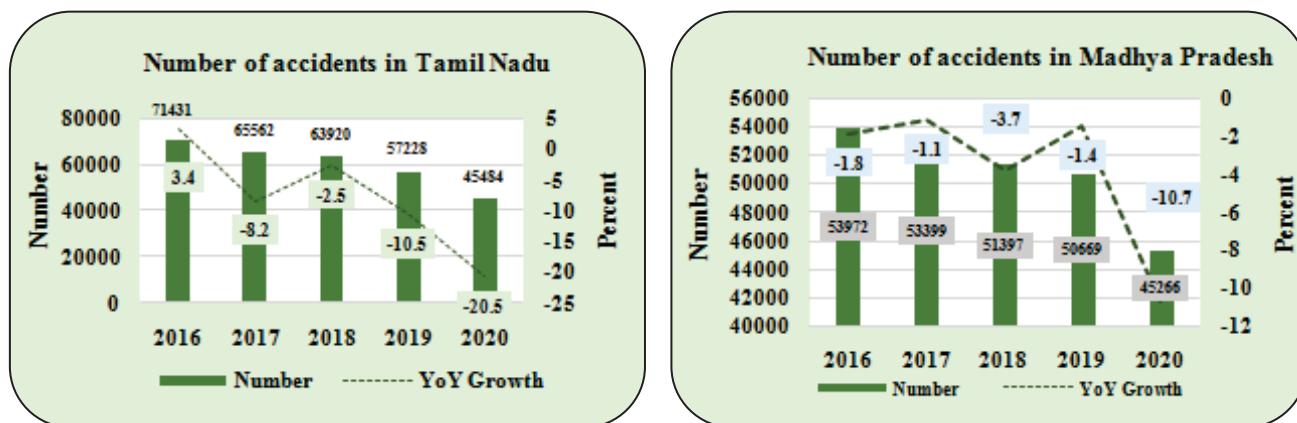

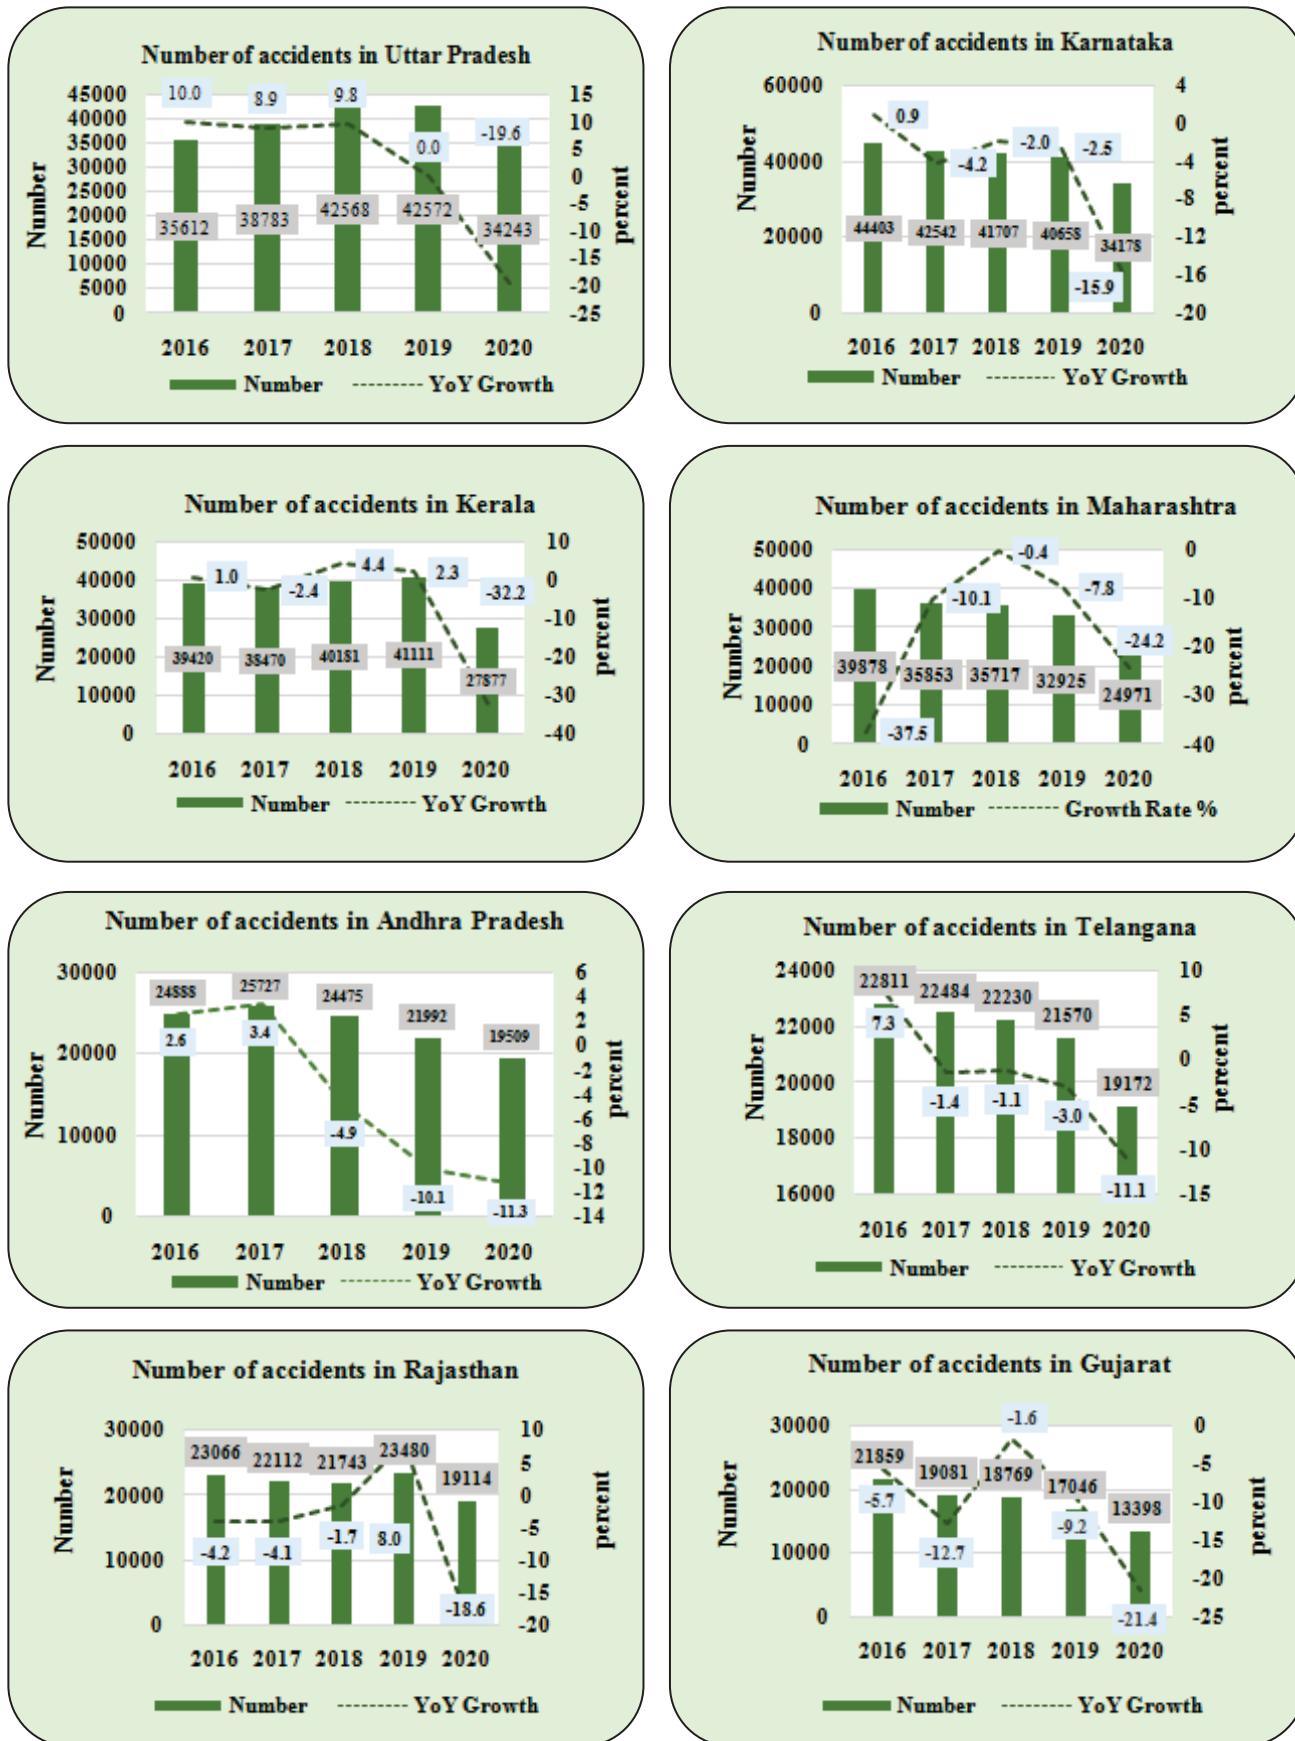

Chart 6.3 continued...

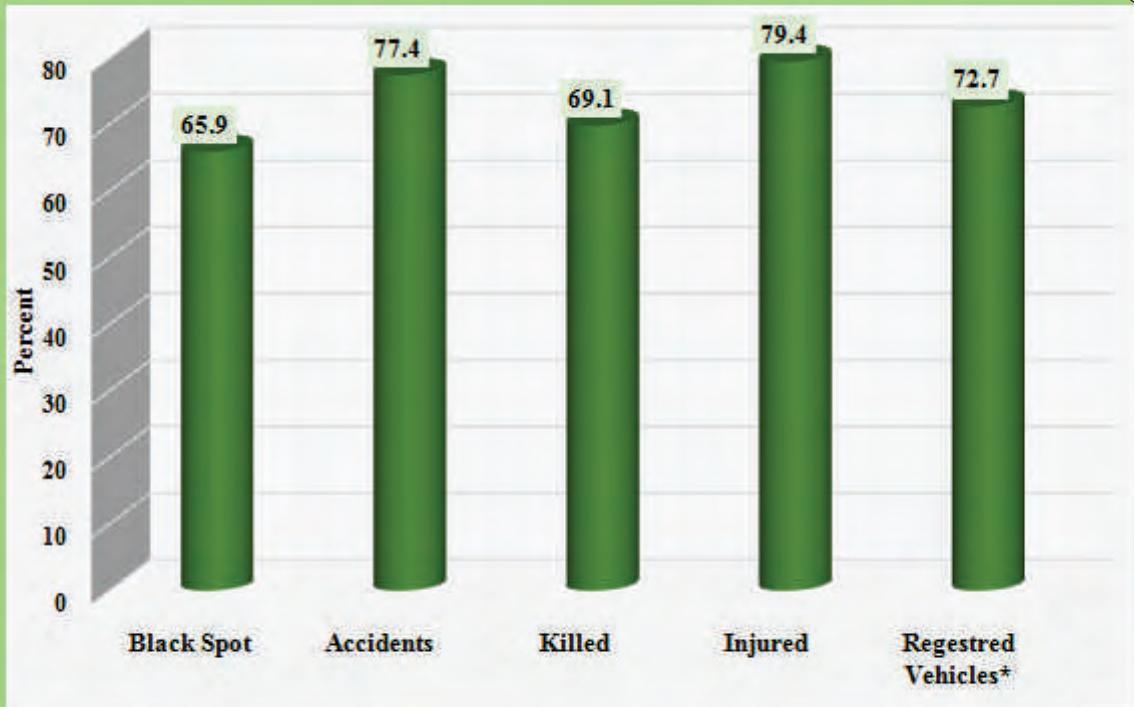

- 6.7 Micro analysis of Top 10 States selected based on number of accidents reported in 2020 highlights information presented in the Table 6.3 and Chart 6.4. Table 6.1 reveals that, since 2016 (i.e. during last five years), the same set of States constitute top 10 in terms of number accident, with variations in their ranking year after year. In Table 6.1, Tamil Nadu and Madhya Pradesh topped amongst the States in terms of number of accidents since 2016. Top ten States collectively shares about 77.4 percent of total accidents in the country in 2020.
- 6.8. In respect of fatality, 9 States in Table 6.2 except Kerala are listed in Top 10 States recorded the highest number of fatality at all India level during 2020 (refer Table 6.10). Table 6.9 reveals, the same set of States constituted Top 10 States in number of fatalities since 2016, however, their ranking differs. Combined share of top 10 States in total fatality is 69.1 percent in 2020 (refer Table 6.3 and Chart 6.4).
- 6.9. Analysis of Black Spot reveals 66 percent of Black Spots identified in the country is located in Top 10 States (refer to Table 6.3). Similarly, these States also shares about 72.7 percent of total vehicles registered in the country and also have vital share in total road length of the country.
- 6.10. Top 10 States are mostly located in South-Western region of India. Geographical features of these regions may be a possible factor leading to accidents. Study with special focus on road features of this region may be useful for reducing road causality.
- 6.11. However, it may be noted that the major road accident parameters depict a declining trend in these Top 10 States particularly since last three years. Micro analysis of top ten States indicate State Specific and Area specific monitoring policy can contribute effectively to reduce road casualties in the country.

Table 6.3: Total number of accident, persons killed, Black Spot and vehicle registered in Top 10 States during 2020

During 2020	Accident	% Share in Total	Fatality	% Share in Total	Black Spots	% Share in Total	Registered Vehicles*	% Share in Total
Tamil Nadu	45,484	12.4	7,039	5.3	748	12.9	30,175	10.2
Madhya Pradesh	45,266	12.4	11,141	8.5	303	5.2	15,296	5.2

* Data pertains to 2019

ANALYTICS OF MAJOR INDICATORS OF CAUSES OF ACCIDENTS IN TOP 10 STATES

6.12. Road accidents are multi-causal and are the result of an interplay of various factors. These can broadly be categorized into those relating to (i) human error, (ii) road condition/environment and (iii) vehicular condition. These factors act in an interactive manner to cause road accidents. Details on causes of accidents at national level is given at Section 4 of this report. Performance of major indicators which caused accidents in Top 10 States is summarised in Table 6.4 and Chart 6.5.

6.13. 'Traffic rules violation, is one of the major factor leading to accidents over the years. Amongst the indicators of traffic rules violations (refer Table 4.1 in Section 4), "over speeding" has been

responsible for 72.5 percent (2,65,343) of total accidents and 69.3 percent (91,239) of total fatality in the country during 2020 (Chart 6.5). Table 6.4 reveals, about 80.5 percent of accidents and 73.9 percent of fatality occurred due to "over speeding" took place in Top 10 States. The contribution of Top 10 States in accidents and fatality due to over speeding is given at Table 6.4.

6.14. Road features such as straight roads, curved road, sharp curves, potholes etc. tend to be accidents prone because it takes skill, extra care and alertness to negotiate these road features. Under the category of 'Road Features' (refer Table 4.5 in Section 4), the "straight roads" constitute about 65 percent (2,37,943) of

total accidents and 64 percent (85,032) of total fatality in the country in 2020. Table 6.4 it may be seen that, around 80 percent of accidents and 72 percent of fatality took place on “Straight Roads” in Top 10 States (Chart 6.5). The contribution of Top 10 States in accidents and fatality due to 'road feature- Straight road' is given at Table 6.4.

6.15. 'Road Junctions Type' and 'Traffic Controls', are major factors leading to road accidents in the country over the years. The road junctions are the points where traffic merges and hence are prone to accidents. Amongst the indicators of 'Road Junctions Type' and 'Traffic Controls' (refer to Table 4.6 and 4.7, Section 4), category called “Others” constitutes around 73 percent of total accidents and 76 percent of total fatality (refer Table 6.4) at all India level. In Chart 6.5, about 75.5 percent of accidents and 67.8 percent of fatality occurred due to “Other” reason took place in Top 10 States. The reasons fall under “Others” category need to be identified and specific study need to be carried out at national level for the

rectification of such issues.

6.16. 'Weather Conditions' and 'Road Environment' are among the major reasons of accidents in the country. Under the category of 'Weather Conditions' (Table 4.8, Section 4), the “sunny/clear weather” accounted for about 71.3 percent (2,61,046) of total accidents and 67 percent (88,239) of total fatality occurred in the country. In the chart 6.5, Top 10 States accounted for about 82 percent of accidents and 75.5 percent of accidents under sunny/clear weather condition.

6.17. Under the category of 'Road Environment' (refer to Table 4.4), 47 percent of accidents and 53.7 of fatality at all India level occurred in “Open Area”. In chart 6.5, 87 percent (1,50,984) of accidents and 72.2 percent (51,068) of fatality occurred on “Open Areas” of Top 10 States. Overall micro analysis Top 10 States show need for improved enforcement, engineering, education measure to curb accidents and fatality in these States, which in turn can reduce road causality at national level at large.

Table 6.4: Total number of accident and fatality in Top 10 States in respect of major parameters of causes of accidents during 2020

Chart 6.5: Major indicators of causes of accidents in total accidents and fatality during 2020

6.18. Despite some marginal fluctuations, percentage share of North Eastern States in total accidents has been constant during the last four years i.e. 2016 to 2020 (Table 6.5). Among the North Eastern States, Assam recorded highest

number of accidents during 2016 to 2020, however, marked a significant reduction in growth of 21 percent in 2020 on average over 2019. Nagaland with 500 accidents is in the second place followed by Tripura (466) and Manipur (432).

6.19. Among Union Territories, NCT of Delhi has recorded highest number of accidents during 2016 to 2020, however, the number of accident declined from 7375 (1.5%) in 2016 to 4178 in 2020, followed by Puducherry with 969 accidents in 2020, accounted for a

decrease of 30.4 percent on average over 2019 (Table 6.6). Union Territories presently account for nearly 1.5 percent of the total road accidents. Their share in accidents has however been decreasing from 2.07% in 2016 to 1.5 % in 2020.

Road Accidents by Category of Roads (National Highways)

6.21. Tamil Nadu maintains its top position in 2020 by contributing 13.1 per cent of total road accident on National Highways in the country followed by Uttar Pradesh (11.8%) and Karnataka (9.6) and Bihar in the bottom (10th position) with a share of 3.5 per cent

(Table 6.8). Top Ten States together accounted for more than 73 percent of accidents on NH and share of National Highways in total accidents has also been increased during 2016 to 2020. Details are given at Section 2 of this report.

STATE WISE PROFILE OF FATALITIES

6.22. The total number of accident death declined from 1,51,113 in 2019 to 1,31,714 in 2020, registered a decline of 18.5 percent on average over previous year's average. In the Chart 6.7, on States/UTs front, except Nagaland, Dadra Nagar Haveli and Lakshadweep, all States recorded decline in fatalities during 2020 compared to same period in 2019.

6.23. Amongst Top 10 States in Table 6.10,

Tamil Nadu (-24.3 %), Kerala (-32.9%), Uttar Pradesh (-15.5%) and Gujarat (-16.5%) reported increase in fatality above national average of 12.8 percent (Chart 6.8). Whereas, Madhya Pradesh (-1%), Andhra Pradesh (-11.8%), Telangana (-1.2%), Karnataka (-10.9%), Maharashtra (9.5) and West Bengal (-10.4) recorded decline in the incidence of accident fatality below all India average of 12.8 percent (Chart 6.8).

Chart 6.7: Percent share of States/UTs in reduction of road accident deaths in 2020

TOP 10 STATES IN NUMBER OF FATALITIES

6.24. Top 10 State in the Table 6.10 has been selected based on the number of accident deaths reported by States/UTs during 2020. The composition of 10 States is largely same with that of 2018 and 2019. Uttar Pradesh recorded the highest share i.e. 14.5% of accident death (19,149) followed by Maharashtra with share of 8.8% (11,569 killed), Madhya Pradesh with of 8.5% (11,141 killed), and

Karnataka with of 7.4% (9760 killed). The Top 10 States accounted for a combined share of 72.7 % of road accidents death in 2020. Other than Kerala, all states included in the list of Top 10 States of fatalities are topped at all India in 2020 (refer Table 6.3). Details of State/UT wise distribution of total road accident deaths is given in **Annexure 3**.

Table 6.10: Number of fatalities in top 10 States during 2016-2020

States	2016		2017		2018		2019		2020

Micro analysis of Road Accident Fatalities in Top 10 States during 2020

6.25. During the last four years i.e. 2017-2020, top 10 States in Table 6.10 responsible for more than 72 percent of total road accident deaths in India. Micro analysis of Top 10 States listed in the Chart 6.9 reveals a declining trend in growth of fatalities particularly after 2018 for majority of the States. Uttar Pradesh, Maharashtra, Karnataka, Bihar and Gujarat recorded significant decline in the fatalities after 2018. In Andhra

Pradesh, Madhya Pradesh, Rajasthan and Telangana, number of fatalities and year on year growth show declining trend after 2019, this may be due to the impacts of Covid -19 induced Nationwide lockdown. The incidence of fatalities decreased significantly in Tamil Nadu from 10.1 percent point in 2016 to 24.4 percent in 2018, then except for slight increase in 2019, again it declined to 23.4 percent in 2020.

Chart 6.8: Road Accidents fatalities in top 10 States (2016-2020)

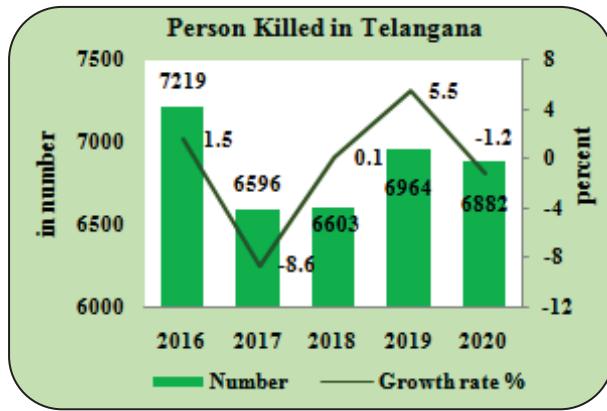

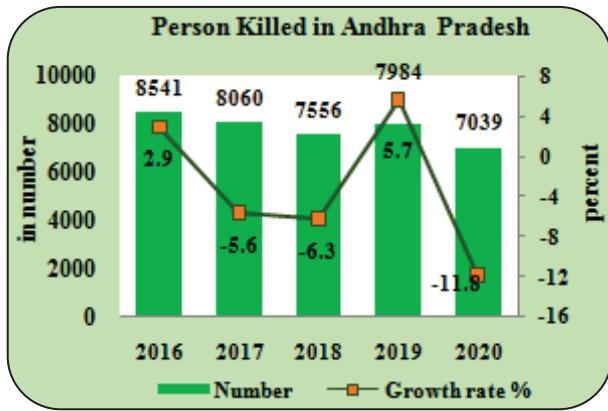

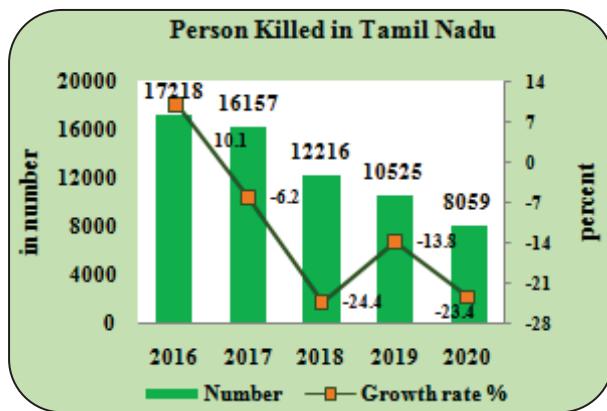

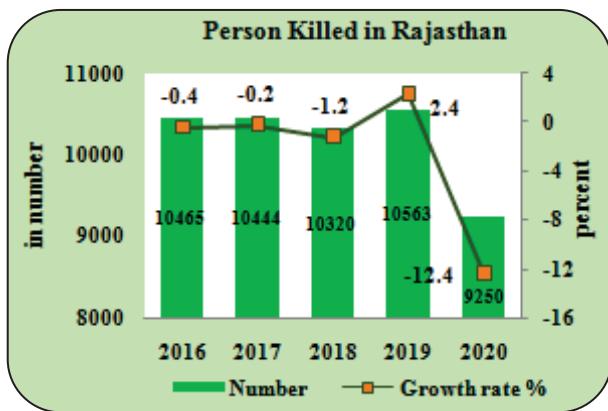

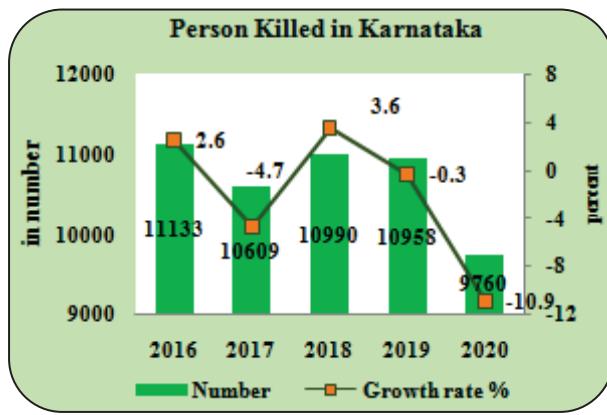

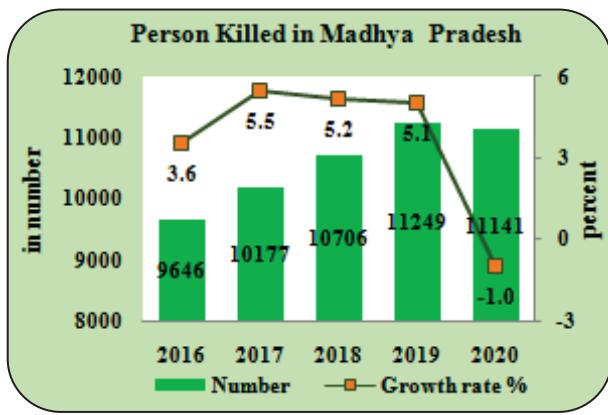

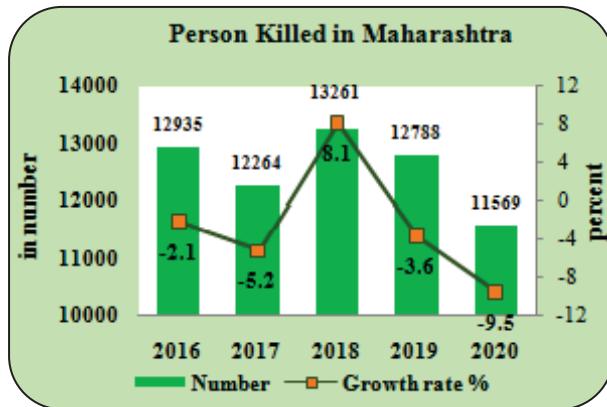

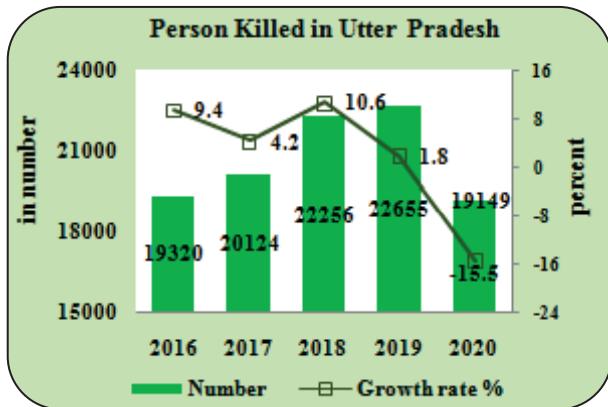

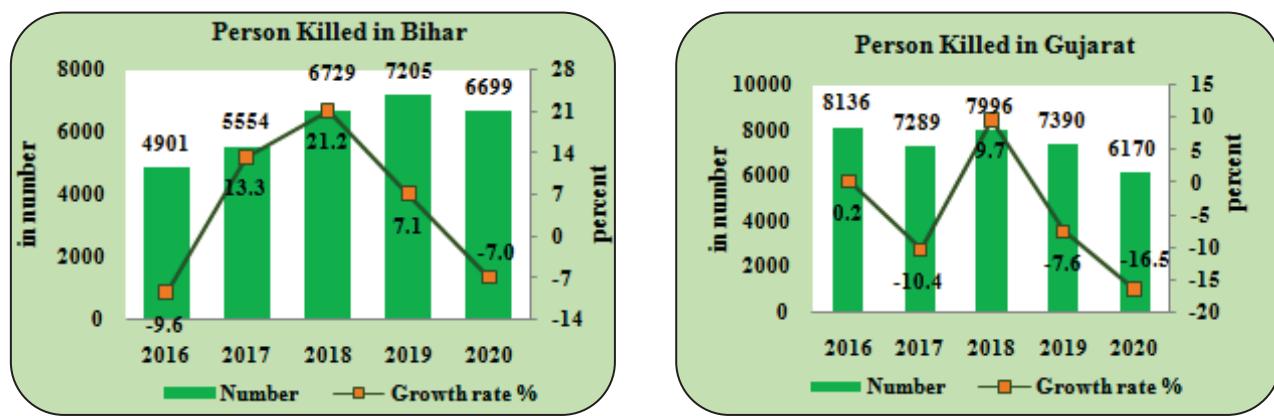

Chart 6.8 continued...

6.26. Despite some marginal fluctuations, percentage share of North Eastern States in total fatalities have been constant during the last four years i.e. 2016 to 2020 (Table 6.11). Among the North

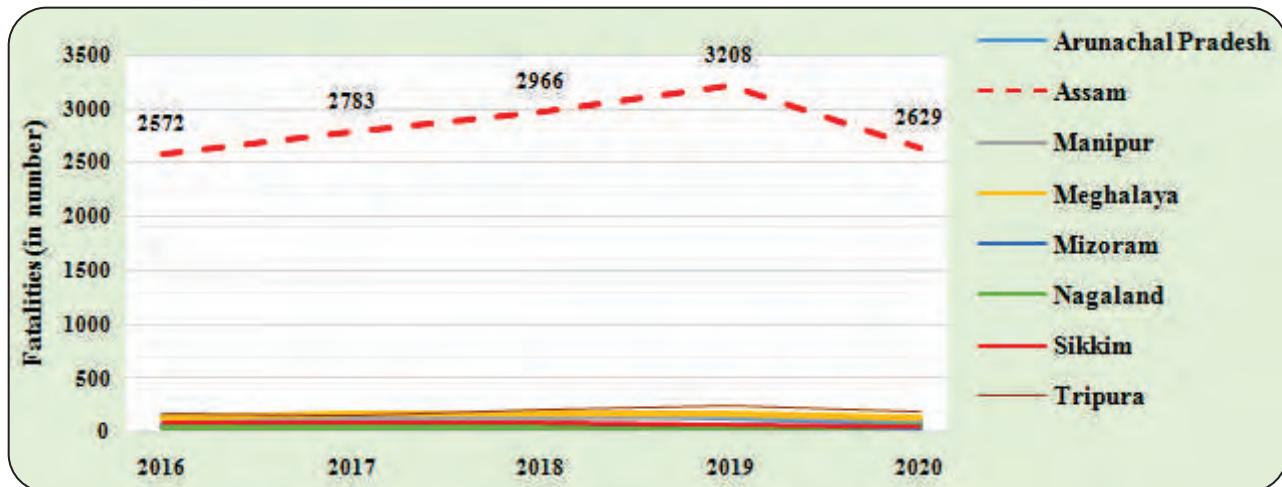

Eastern States, Assam recorded the highest number of fatalities during 2016 to 2020. For other North Eastern States, trend of fatalities has been stabilised during 2016 to 2020 (Chart 6.10).

Chart 6.9: Trends in the Number of Road Accident Fatalities in North Eastern States (2016-2020)

6.27. Among the Union Territories, NCT of Delhi recorded highest number of fatalities during 2016 to 2020, where the number declined from 1591 (1.1%) in 2016 to 1196(0.9%) in 2020, followed by Puducherry with 145 (0.1%) deaths in 2020, registered a decrease of 35 percent over 2019. Union territories presently accounted for nearly 1.1 percent of the

total road accident deaths in the country. Their share in accident deaths has however, decreased from 1.4 % in 2016 to 1.1 % in 2020. Except Dadra Nagar Haveli, all UTs registered decline in the accident death in 2020 compared to 2019. (Table 6.12 refer to) i.e. UTs together accounted for 18.72 percent decline of accident death in 2020 over 2019.

Table 6.12: Road Accidents Fatalities in Union Territories during 2016-2020

Figures in parentheses indicate the percentage share in the total

6.28. Uttar Pradesh has achieved the maximum reduction in total number of fatalities with a share of about 18.1 % reduction in total followed by Tamil Nadu (12.7%) and Kerala (7.5%) as may be seen by

order of reduction in the table 6.13. Top Ten States together accounted for 75.8 percent of total reduction in accidents deaths in 2020.

Table 6.13: Top 10 States reduced number of Fatalities in 2020

Road Accidents Fatalities by Category of Roads (National Highways)

6.29. Uttar Pradesh maintains its top position in road accident fatalities in 2020 at National level and also top in the list of total number of road accident fatalities on National Highways in the country by contributing 16.4 per cent followed by Maharashtra (7.4%), Karnataka (6.9%). West Bengal is at the bottom (10th

position) with a share of 3.8 per cent (Table 6.14). Top Ten States together accounted for more than 72.6 percent of accidents fatalities on NH and share of National Highways in total accident fatalities has also been increased during 2016 to 2020(Table 6.14).

Table 6.14: Number of road accidents fatalities on National Highways in top 10 States and respective percentage shares during 2016-2020

Sl. No.	States/UTs	2016	2017	2018	2019	2020

Section - 7

ROAD ACCIDENTS IN MILLION-PLUS CITIES

7.1 Road accidents tend to be concentrated in urban areas because of dense population and road traffic congestion. In this Section, an abstract of road accident statistics for 50 Indian cities with population of one million and above (one million-plus) are briefly highlighted. These cities are spread across 17 States and 2 UTs. In 2020, a total of 58,736 road accidents were recorded in the 50 one million-plus cities

which resulted in loss of 13,542 lives and caused injuries to 50,515 persons (Table 7.1). As compared to 2019, less number of road accidents, persons killed and injured recorded in 2020 in these cities. But accident severity, i.e., accident deaths per 100 road accidents, has gone up by 23.06. In 2020, these 50 cities accounted for 16.04 per cent of the total of accidents and 10.3 per cent of total fatalities in the country (Table 7.1).

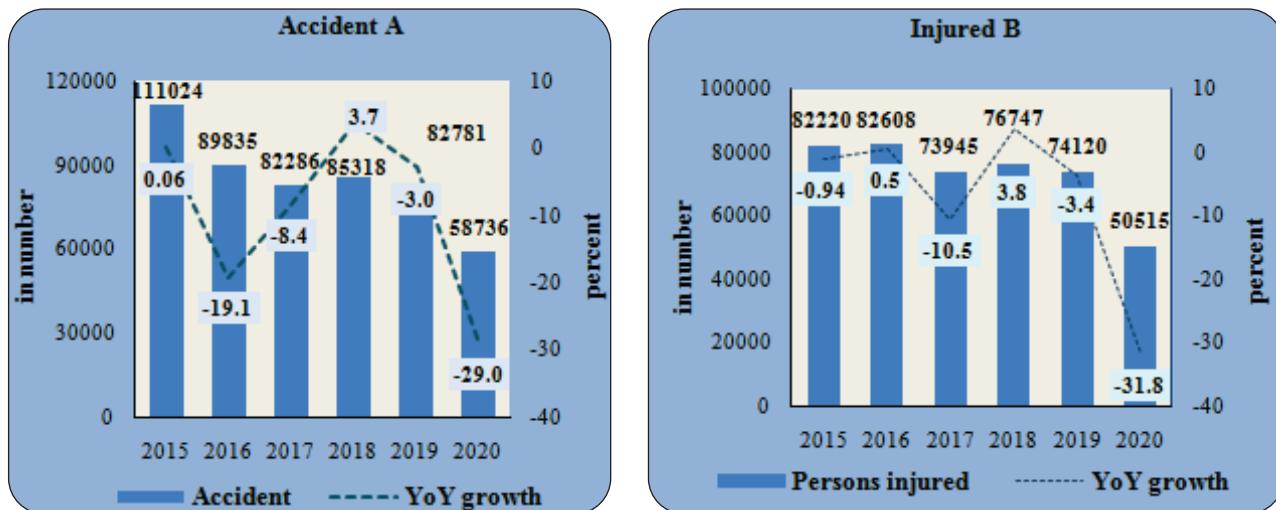

Table 7.1: Million-plus cities in total road accidents, number of persons killed and injured during 2016-2020

S. No	Description	2016	2017	2018	2019	2020	CAGR

	All India - Accident severity*	31.4	31.8	32.4	33.7	36.0	

7.2 Total number of accidents and number of persons killed in Million Plus Cities registered significant reduction in growth from 2018 onwards (Chart-7.1- A & B). The incidence of accident recorded a marked decline of 29 percent in 2020

over 2019, which is above national average of 18.5 percent decline recorded in 2020. Similarly, growth of injury registered a decline of 31.8 percent, which is higher than national average of 22.8 percent decline recorded in 2020.

Chart 7.1: Trends in Number of Road Accidents and Injuries in Million Plus Cities

7.3 Million plus cities have shown a slightly declining trend in percent share of accidents and injuries during the period 2015 to 2020 (Chart 7.2). However, the number of fatalities in million plus cities remained more or less stable, registering a marginal decline in 2020. The accident

severity has been depicting upward trend in the million plus cities over the period 2015 to 2020, increasing from 14.9 percent in 2015 to 23.1 percent in 2020. Detailed profile of number of accidents, persons killed and injured is given at the Table 7.2.

Chart 7.2: Share of Million-Plus Cities in Total Road Accidents, Persons Killed and Injured during 2015-2020 (percent)

TOP 10 MILLION PLUS CITIES IN ACCIDENTS DURING 2020

7.4 Top 10 cities listed in Table 7.3 are selected based on the number of accident reported by these Cities in the year 2020. Chennai has recorded the highest number of accidents in 2020, followed by Delhi and Bangalore being at the third place (Table 7.3). The top 10 cities comprising Chennai, Delhi, Indore, Bhopal, Jabalpur, Mumbai, Jaipur, Hyderabad, etc. accounted for 47.62 per

cent of the total road accidents. At the bottom are Amritsar, Jamshedpur and Chandigarh (Table 7.2). Except Vizag, all million plus cities recorded decline in number of accidents in 2020. The number of road accidents and fatalities has drastically reduced in Kochi, Kolkata, Malappuram, Jaipur, Raipur, Lucknow, Mumbai etc. in 2020 as compared to 2019 (Table 7.2).

Table 7.3: Number of Road Accidents in Top 10 Million-Plus Cities

S. No.	States/UTs	2016	2017	2018	2019	2020

PROFILE OF ROAD ACCIDENTS IN TOP 10 MILLION PLUS CITIES IN 2020

7.5 During the last five years from 2016 to 2020, Top 10 Million Plus Cities have been sharing more than 46.84 percent of total road accidents in India (table 7.3). Micro analysis of Top 10 Million Plus Cities listed in the Chart 7.3, shows decline in the incidence of accident from 2018 onwards except for Bengaluru, Hyderabad, Jaipur and Gwalior. In Bhopal and Chennai incidence of accidents show declining trend except for an increase of 3.4 percent and 4.5

percent respectively recorded in 2018. Chennai, Bengaluru, Jaipur and Mumbai recorded significant decline in number of accidents in 2020 compared to 2019, which may be due to the impact of Covid-19 induced Nationwide lockdown. The incidence of accident decreased significantly in Delhi (-25.5%), Bangalore (-31%), Hyderabad (-28.8%), Jaipur (-54.6%), Mumbai (-36.9%) and Chennai (-36.1%) in 2020.

Chart 7.3: Trends of Road Accidents in top 10 Million Plus Cities

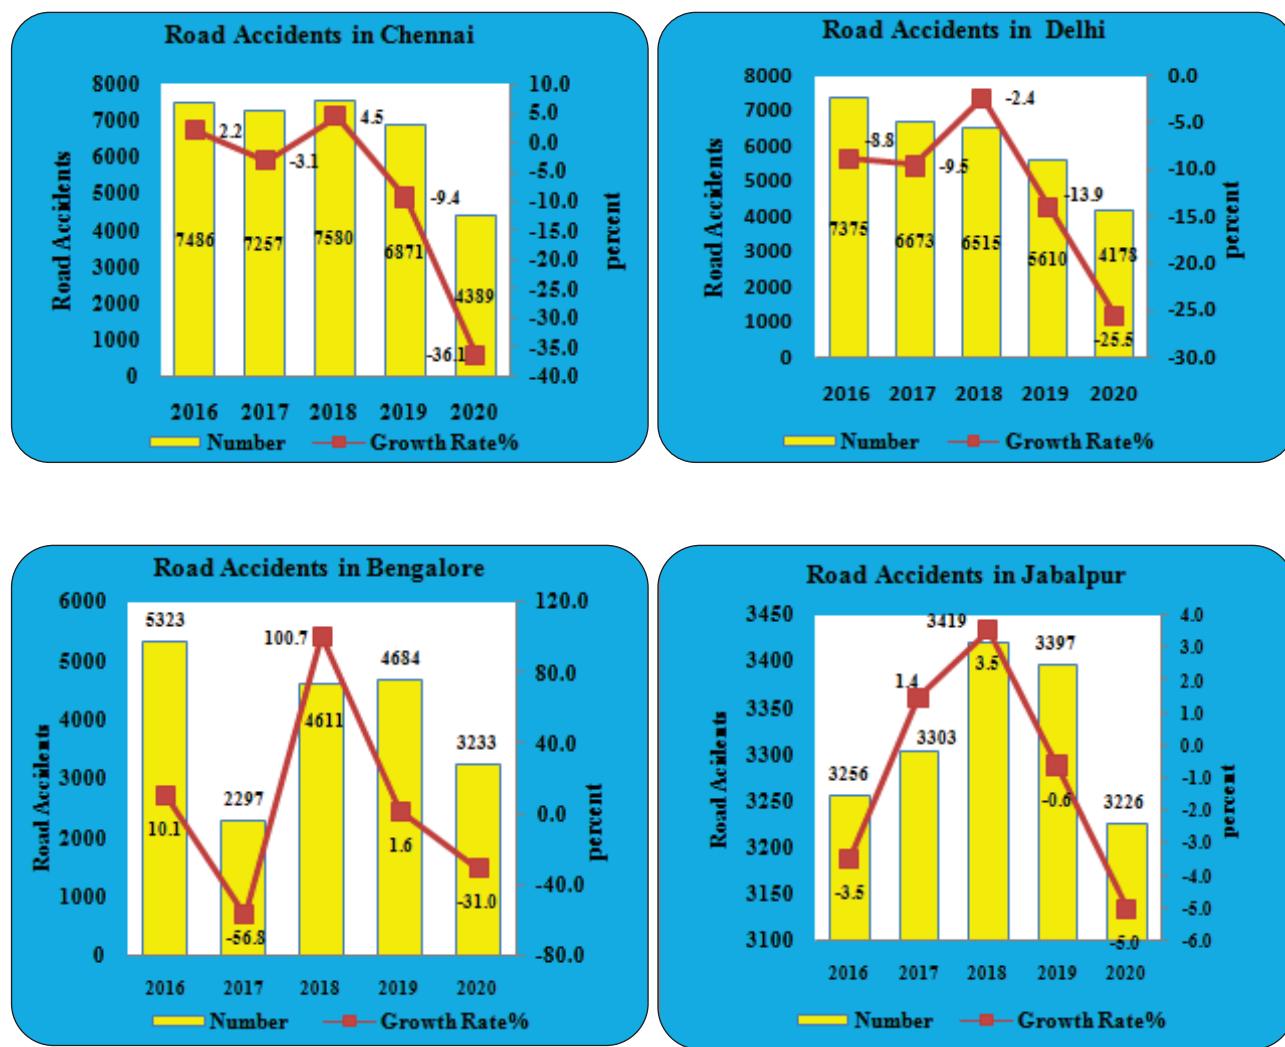

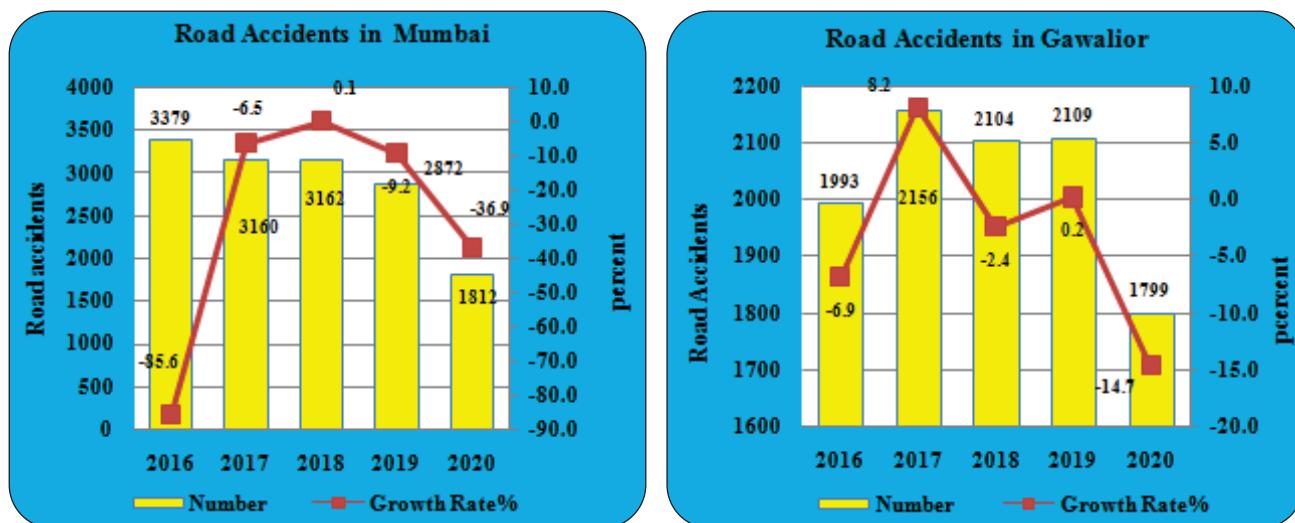

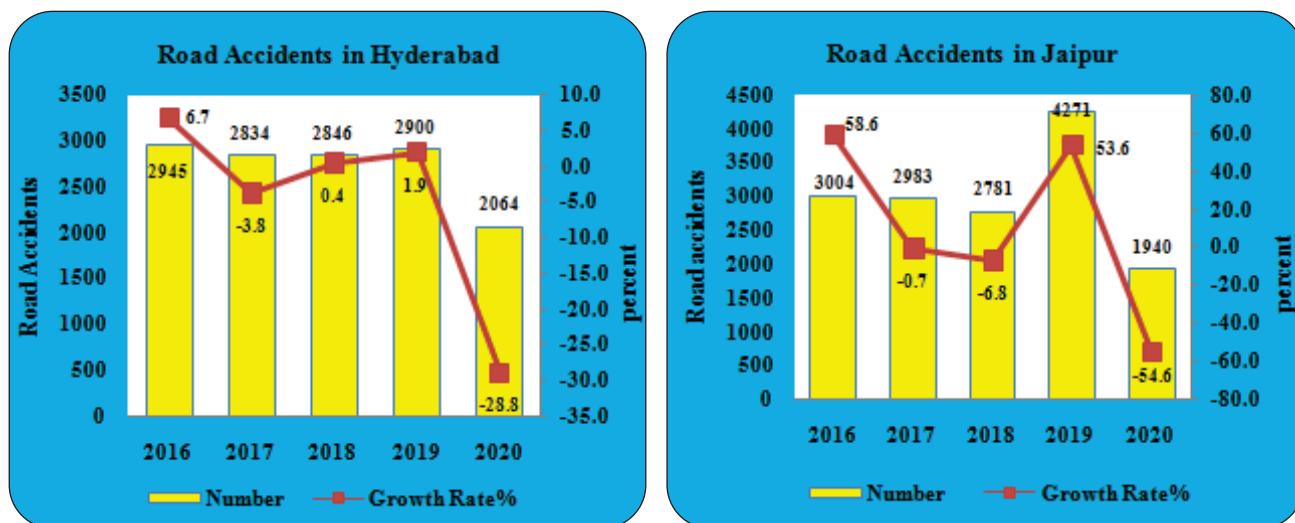

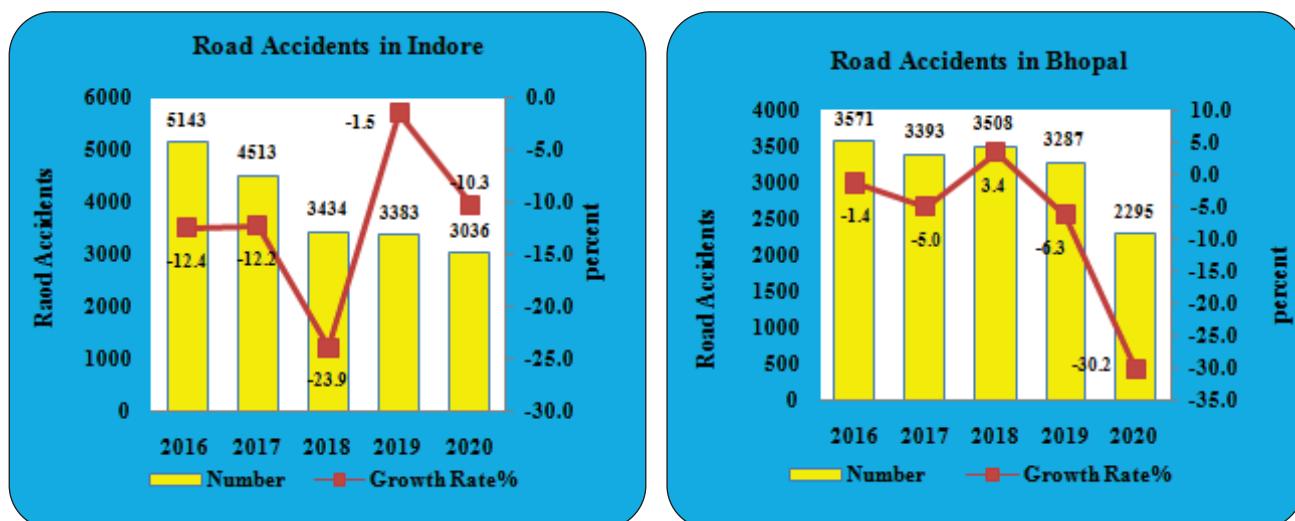

Chart 7.3 contd...

Top 5 Million Plus Cities which reduced number of accidents in 2020

7.6 Chennai achieved the maximum reduction in number of accidents i.e. decline of 2482 accident followed by

Jaipur and Bangalore as may be seen by order of reduction in the table 7.4.

Table 7.4: Top 5 Million Plus Cities which reduced number of Road Accidents in 2020

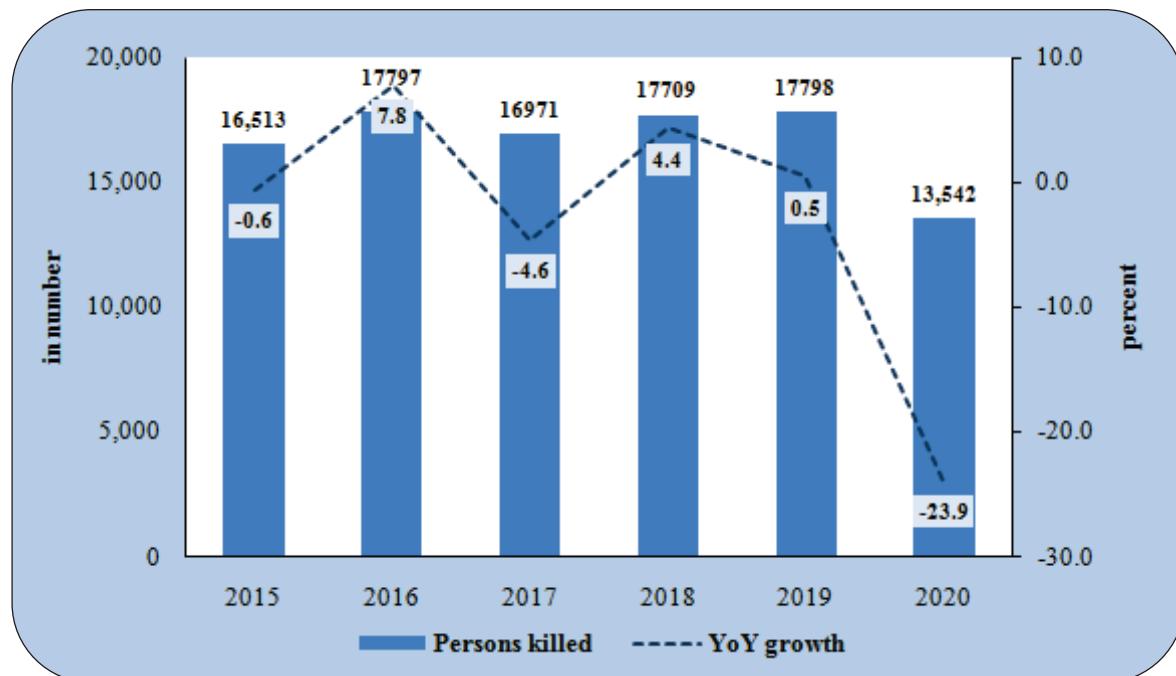

Top 5 Cities	2019	2020	Reduction	% Reduction
Chennai	6,871	4,389	-2,482	-36.1
Jaipur	4,271	1,940	-2,331	-54.6
Bengaluru	4,684	3,233	-1,451	-31.0
Delhi	5,610	4,178	-1,432	-25.5
Mumbai	2,872	1,812	-1,060	-36.9

ROAD ACCIDENT FATALITIES IN MILLION PLUS CITIES

7.7 The total number of accident deaths declined from 17,798 in 2019 to 13,542 in 2020, recorded a decrease of 23.9 percent relative to same period last year, which is higher than all India average decline of 12.8 percent. It may be seen in the Table 7.2 that all Million Plus Cities except

Jabalpur, Ludhiana, Gwalior and Asansol, Durgapur, Indore, Raipur, and Trissur recorded decline in number of accident death during 2020 as compared to 2019. The trends of accident fatalities in Million Plus Cities show general declining trend since 2018 in the Chart 7.4.

Chart 7.4: Trends of Road Accident Fatalities in Million Plus Cities

Top 10 Million Plus Cities in terms of number of Fatalities in 2020

7.8 Top 10 Cities are selected based on the number of fatalities reported in the year 2020. In respect of number of fatalities, Delhi recorded the highest number of deaths in 2020, followed by Chennai and then Bangalore. The Top 10 cities together accounted for 46.35 per cent of road accident deaths in the 50 Million-

Plus Cities in 2020 and trends of percent share has been on increase over the years from 2015 to 2020 (Table 7.5). Jamshedpur, Amritsar and Kannur are the bottom three Cities contributing less than 0.1 per cent of the total road accident deaths in the 50 one million-plus cities.

Table 7.5: Top 10 Million Plus Cities which reduced number of Road Accident Fatalities in 2020

Sl/No	States/UT's	2015	2016	2017	2018	2019	2020
1	Delhi	1,622 (9.82)	1,591 (8.94)	1,584 (9.33)	1,690 (9.54)	1,463 (8.22)	1,196 (8.83)

Micro profile of Top 10 Million Plus Cities in respect of Accident Fatalities

7.9 During the last five years from 2016 to 2020, Top 10 Million Plus Cities have been sharing more than 40 percent of total road accidents fatalities in India (Table 7.5). Micro analysis of Top 10 Million Plus Cities listed in the Chart 7.5, show a decline in the incidence of accident fatalities from 2018 onwards in cities like Delhi, Chennai, Kanpur,

Allahabad, and Agra. Indore city show marked increase in fatalities, increasing of 39.9 percent in 2020 over 2019. In respect of Raipur city, total number of fatalities has been showing slightly increasing trend during 2016 to 2020. However, Chennai city registered consistent decline in the growth of accident death during 2016 to 2020.

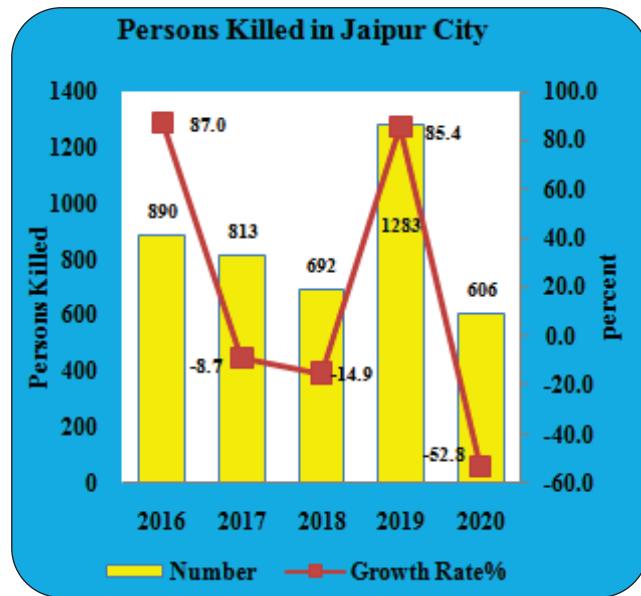

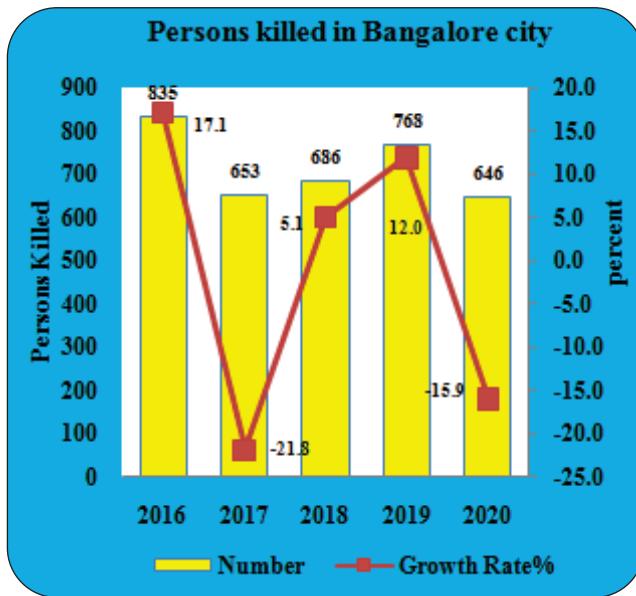

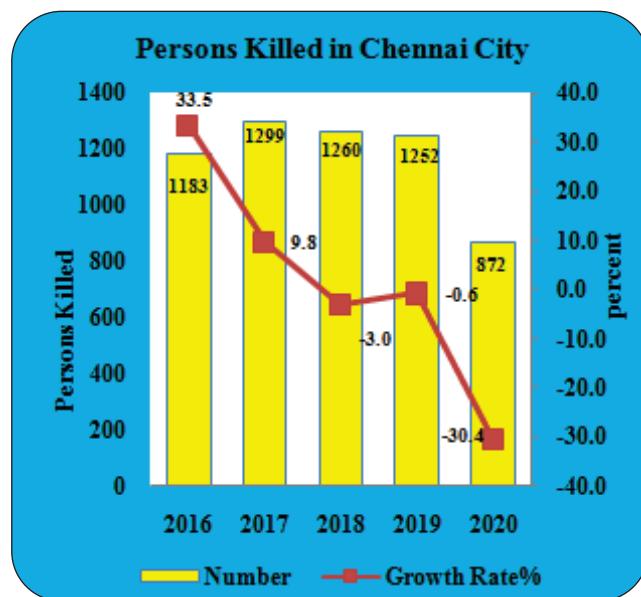

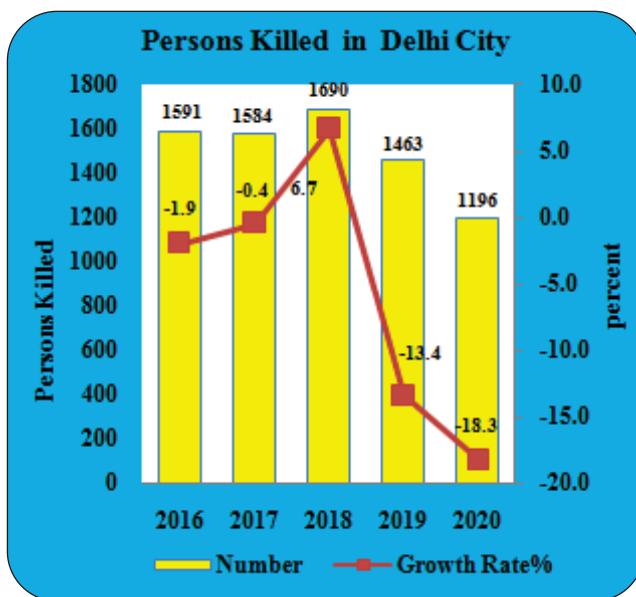

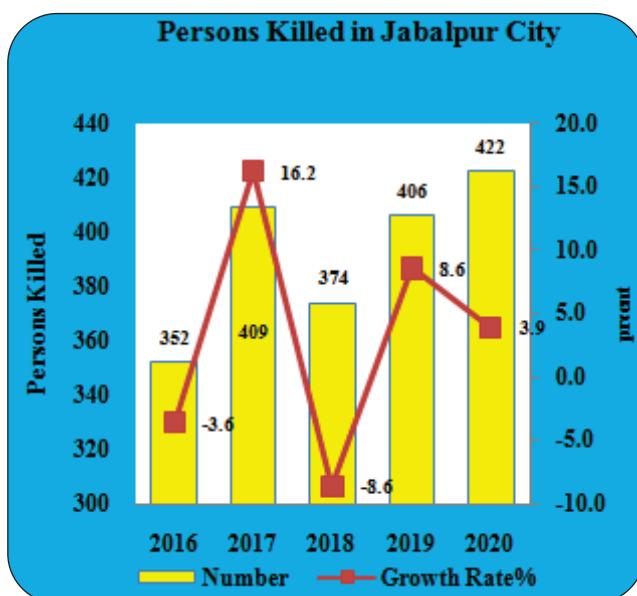

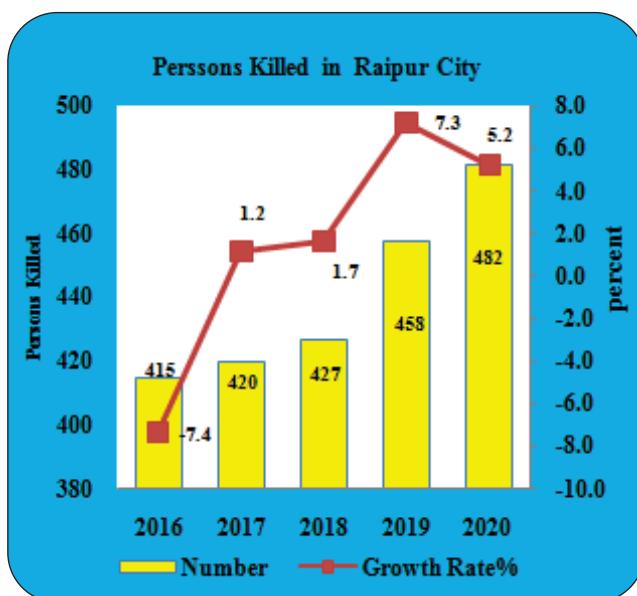

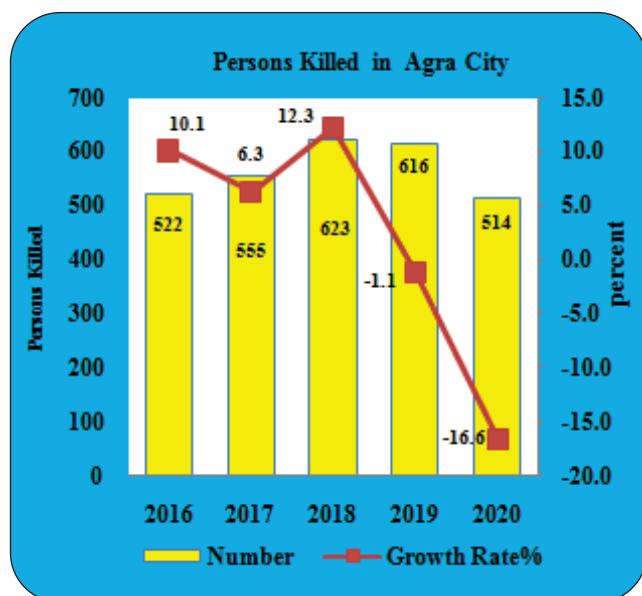

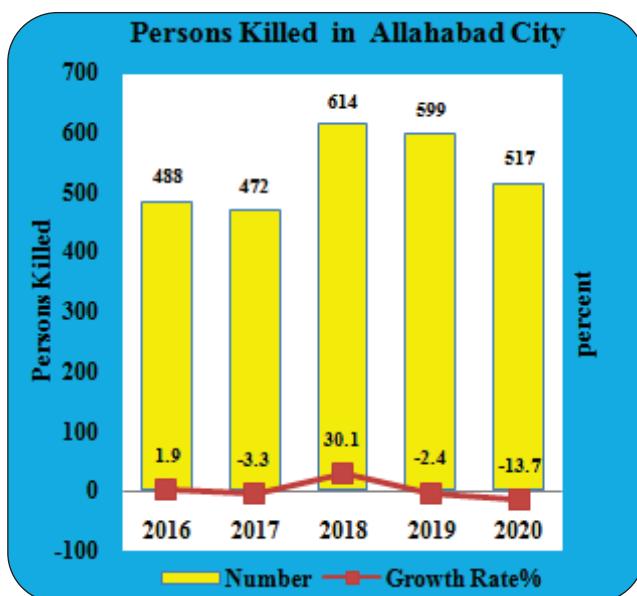

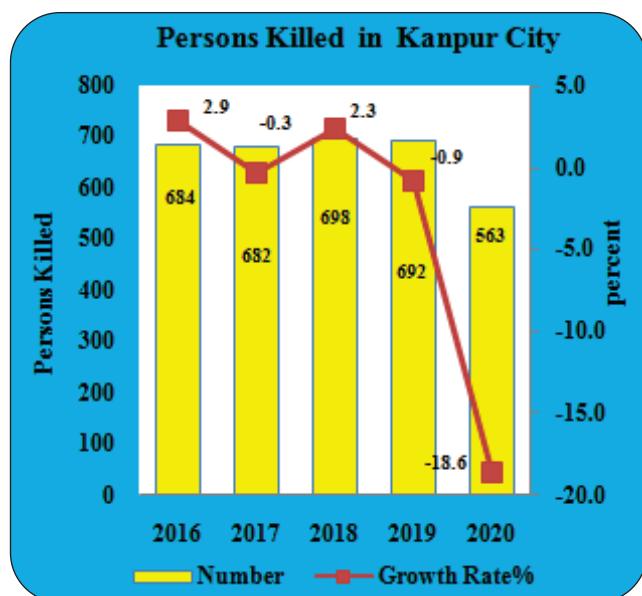

Chart 7.5 continued...

Chart 7.5 contd...

Top 5 Cities Reduced Fatalities in Million Plus Cities in 2020

7.10 Jaipur achieved the maximum number in reduction of accident fatalities i.e. decline of 677 deaths in 2020 as

compared to 2019 followed by Jodhpur and Chennai as may be seen by order of reduction in the table 7.6.

Table 7.6 Top 5 Million Plus Cities reduced fatalities in 2020

Top 5 Cities	2018	2019	Reduction	% Reduction
Jaipur	1,283	606	-677	-52.8
Jodhpur	589	142	-447	-75.9
Chennai	1,252	872	-380	-30.4
Delhi	1,463	1,196	-267	-18.3
Lucknow	581	374	-207	-35.6

CAUSES OF ACCIDENTS IN MILLION PLUS CITIES

7.11 The Supreme Court Committee on road safety had desired greater details in respect of Million Plus Cities to be included in the Road Accident publication. Hence,

additional details are provided from 2019 onwards. The trends of causes of accidents in million plus cities however broadly match the trends seen at the all India level.

Road Accidents, Fatalities and Injuries by type of impacting vehicles

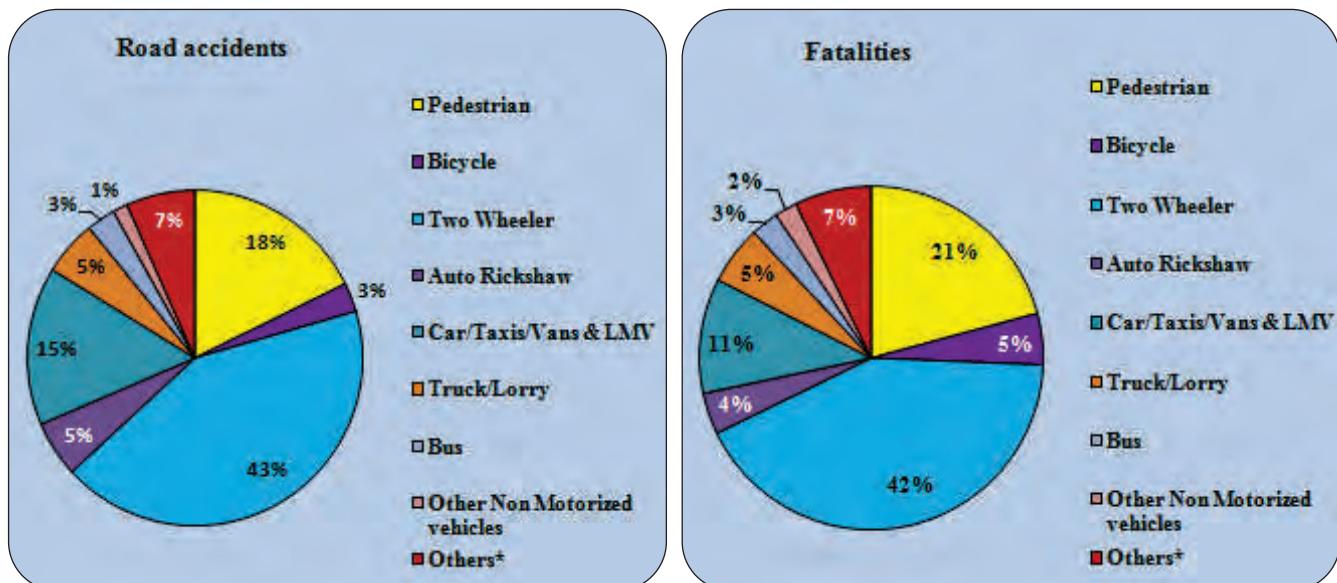

7.12 The data in Table 7.7 and Chart 7.6 reveals two wheelers accounted for the highest share of 42.14 percent of accident deaths in 2020 followed by Pedestrian (20.81 %), car/jeep/van& LVM (10.82%), and Trucks & Lorry accounting for (5.4%). Annexure 46 show, in the Two Wheelers category, Jabalpur topped the list with 1905

accidents and Jamshedpur with 30 accidents is ranked last. In respect of Road Accident Deaths, maximum deaths in the Two wheelers category were reported in the city of Delhi (441) followed by Bangalore with 423 deaths while Jamshedpur reported the least number of deaths (11).

Table 7.7 Road Accidents, Fatalities and Injuries by type of impacting vehicles i.e. Crime Vehicle in Million Plus Cities during 2020

Vehicle type	No. of Accidents	Persons killed	Persons injured
Pedestrian	10,389	2,818	8,982
% Share in total	17.69	20.81	17.78

Chart 7.6: Road Accidents and Fatalities by type of impacting i.e. Crime Vehicle in Million Plus Cities during 2020

Road Accidents, Fatalities and Injuries by type of Traffic Rules Violations

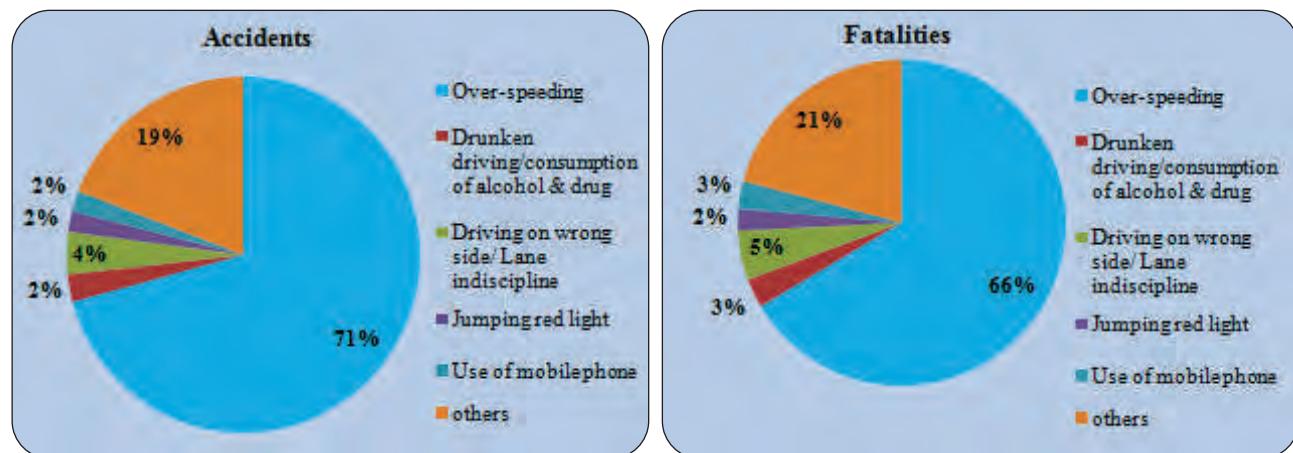

7.13 For the second consecutive year in 2020, 'Over speeding' like at the all India level, is the main traffic violation associated with accidents, accident related deaths and injuries in the 50 million plus cities (refer Table 7.8). Over speeding in the 50 million plus cities accounts for 70.72 percent (41,540) of the road accidents, 66.48 percent (9,003) of road accident deaths and 71.73 percent of (36,235) of total injuries (refer Chart 7.7). **Annexure 47** reveals maximum accidents on

account of over-speeding were reported by Indore (3,032) followed by Bangalore (2993) which topped in 2019, while the least accidents were reported by Kolkata (8) in the second consecutive year (i.e. with 16 accidents in 2019). In terms of road accident deaths on account of over-speeding Chennai with 672 deaths ranks first followed by Bangalore with 596 deaths, while Kolkata with 13 deaths ranks last in the second consecutive year (i.e. with 11 accidents in 2019).

Table 7.8: Road Accidents, Fatalities and Injuries in Million Plus Cities by type of Traffic Rules Violation during 2020

Traffic Rules Violation	Accidents	Persons Killed	Persons Injured
Over-speeding	41,540	9,003	36,235
% share of total	70.72	66.48	71.73
Drunken driving/consumption of alcohol & drug	1,477	390	1,244
% share of total	2.51	2.88	2.46
Driving on wrong side/ Lane indiscipline	2,272	659	1,900
% share of total	3.87	4.87	3.76
Jumping red light	1,099	288	1,000
% share of total	1.87	2.13	1.98
Use of mobile phone	1,101	369	879
% share of total	1.87	2.72	1.74
Others	11,247	2,833	9,257
% share of total	19.15	20.92	18.33
Total	58,736	13,542	50,515

Chart 7.7: Road Accidents and Fatalities by type of traffic rule violation in Million Plus Cities during 2020 (Percent Share)

Road Accidents, Fatalities and Injuries by Road Features

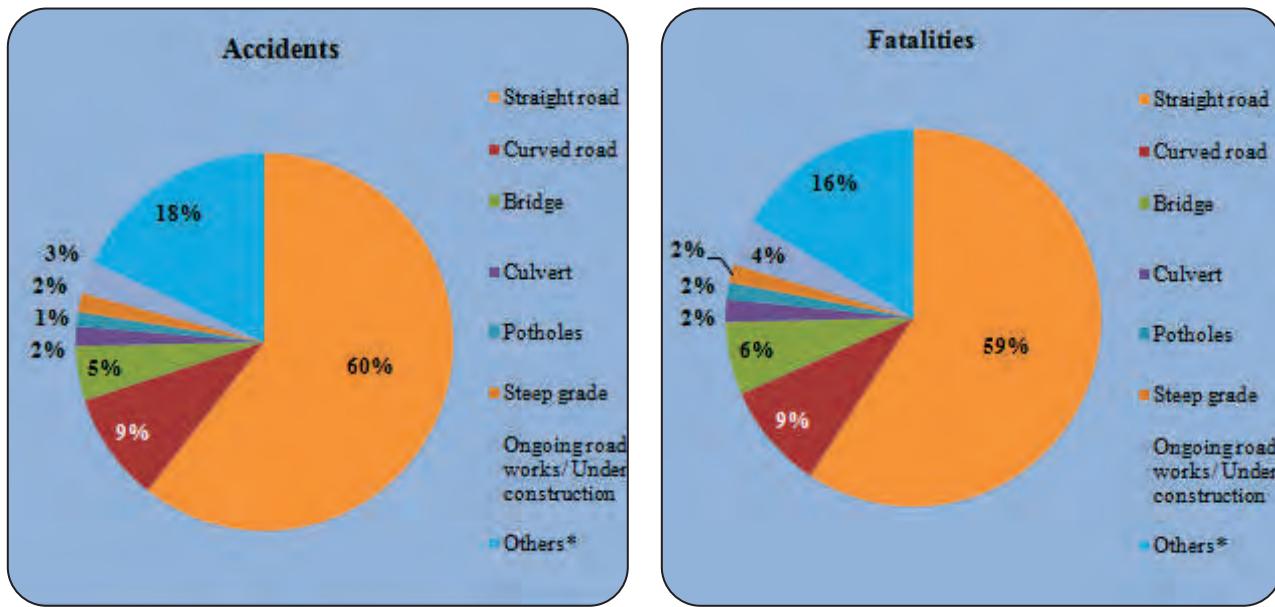

7.14 'Straight roads' accounted for 60.62 percent of road accidents, 59.22 percent of road accident deaths and 59.98 percent of injuries in the Million Plus Cities during 2020 like in 2019 (refer to Table 7.9 and Chart 7.8). The other road type which accounted for the second highest share is 'curved roads' with a share of more than 9 percent of road accidents, death and injuries. Various road features which lead to more road accidents include presence of potholes and also

irregular situation led by ongoing construction works. In the Million Plus Cities, ongoing road works/roads under construction and Bridges together account for 7.45 percent of road accidents, 10.24 percent of deaths and 6.87 percent of injuries. Potholes account for nearly 1.2 percent road accidents, 1.45 percent of road accident deaths and 1.19 percent of injuries. Million Plus City wise details are given in **Annexure -48**.

Table 7.9: Accidents, Persons Killed and Injuries by road feature in Million Plus Cities during 2020

Road feature	Number of accidents	Persons killed	Persons injured
Straight Road	35,605	8,020	30,299
Share in Total	60.62	59.22	59.98

Total Million Plus cities	58,736	13,542	50,515

Chart 7.8: Road Accidents and Fatalities by Road Features in Million Plus Cities during 2020

Road Accidents, Fatalities and Injuries by type of Road Junction

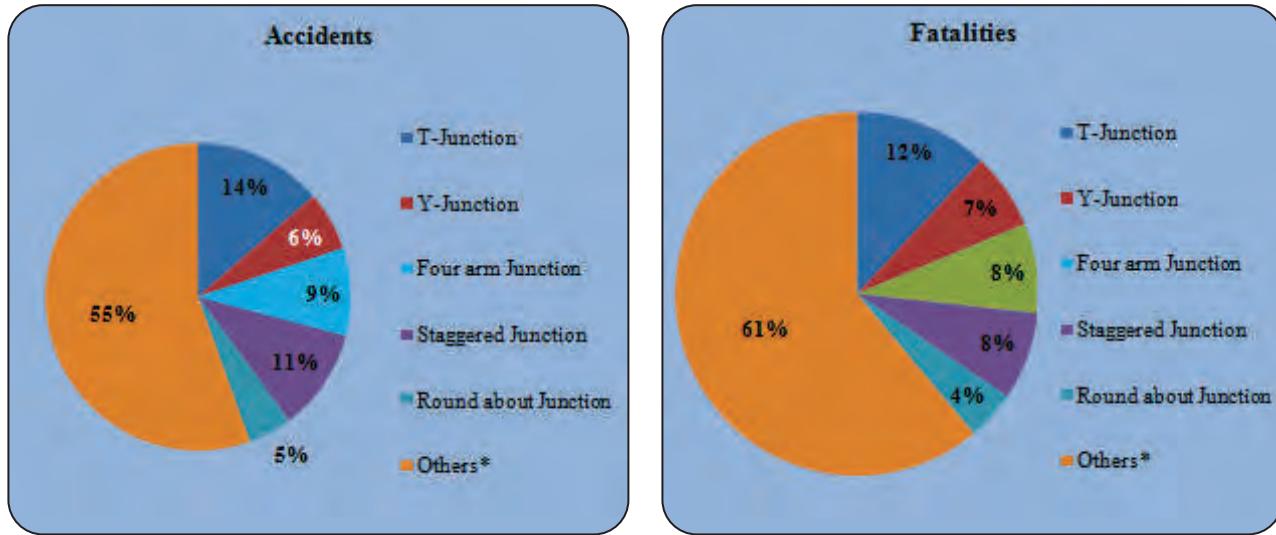

7.15 Road junctions are traffic merging points and hence are prone to accidents. The data of 50 Million Plus Cities reveals 44.5 % of the accidents, 38.91% of death and 44.88 % of injuries in 2020 took place at various types of junctions defined in the table 7.10, while the “others” category accounted for the remaining 55.5 % of accidents, 61.09 % of death and 55.12 % of injuries (Chart 7.9). Within

the Junctions Category, T-junction accounts for the largest share of accidents (13.58%), persons killed (11.94%) and injuries (13.82%). The leading five Million Plus Cities in terms of accidents on T-Junctions are Jabalpur (933), Indore (509), Delhi (487), Kollam (481) and Raipur (461). Million Plus City wise details are given at **Annexure 49**.

Table 7.10: Accidents by type of Road Junction in the Million Plus Cities during 2020

Junction Type	Number of Accidents	Persons Killed	Persons Injured
T-Junction	7,978	1,617	6,980
Share in Total	13.58	11.94	13.82
Y-Junction	3,676	918	3,149

Chart 7.10: Road Accidents and Fatalities by type of Traffic Control in Million Plus Cities during 2020 (Percent Share)

Road Accidents, Fatalities and Injuries by Weather Condition

7.17 Weather condition affects road surface condition and the visibility of the motorists, thereby increasing the chances of mishaps. For the second consecutive year, data of road accidents for 2020, shows that almost 3/4th of the accidents took place under sunny/clear weather

condition (Table 7.12). Accidents under adverse weather conditions such as rainy, foggy and hail/sleet accounted for only 27 per cent of total road accidents during 2020. The city wise details of accidents by weather condition are given in **Annexure 45**.

Table 7.12: Accidents, persons killed and injured by weather condition 2020

Weather condition	Accidents	Killed	Injured
Sunny/clear	42,764	8,800	37,670

Total	58,736	13,542	50,515

Section - 8

SPATIAL AND INTER-TEMPORAL DISTRIBUTION OF ROAD ACCIDENTS

8.1 As per 2011 census, 67.8 per cent of India's population lives in rural area and while 31.2 per cent lives in urban areas. Urban areas have higher population density and more vehicular traffic and therefore more incidences of road accidents as compared to rural areas.

Social and economic activities and travel during a year and in a day have some seasonality and pattern which affects road traffic volume and, perhaps, incidences of accidents as well. This section presents a summary of the related data for 2020 furnished by the States and UTs.

ROAD ACCIDENTS IN URBAN AND RURAL AREAS

8.2 During 2020, 1,40,313 (38.32%) road accidents were reported in urban areas and 2,25,825 (61.68%) in rural areas. In respect of fatal accidents, total of 39,089(32.4%) accidents were reported in urban areas and 81,717 (67.6%) accidents in rural areas. In urban area accidents killed 42,088 (32%) persons whereas in rural areas the number reported was 89,626 (68%). As compared to 2019, the share of urban

areas in accidents and fatalities have come down in 2020, whereas the same has increased for rural areas (Table 8.1). About 36 percent of injured were in the urban area whereas 64 percent of injury took place in the rural area. The higher share of rural areas in total fatalities reveals comparatively inadequate trauma care facilities in rural areas as compared to urban area. State-wise details are given at **Annexure 39**.

Table 8.1: Number of road accidents, persons killed and injured in Rural and Urban areas- 2015 to 2020

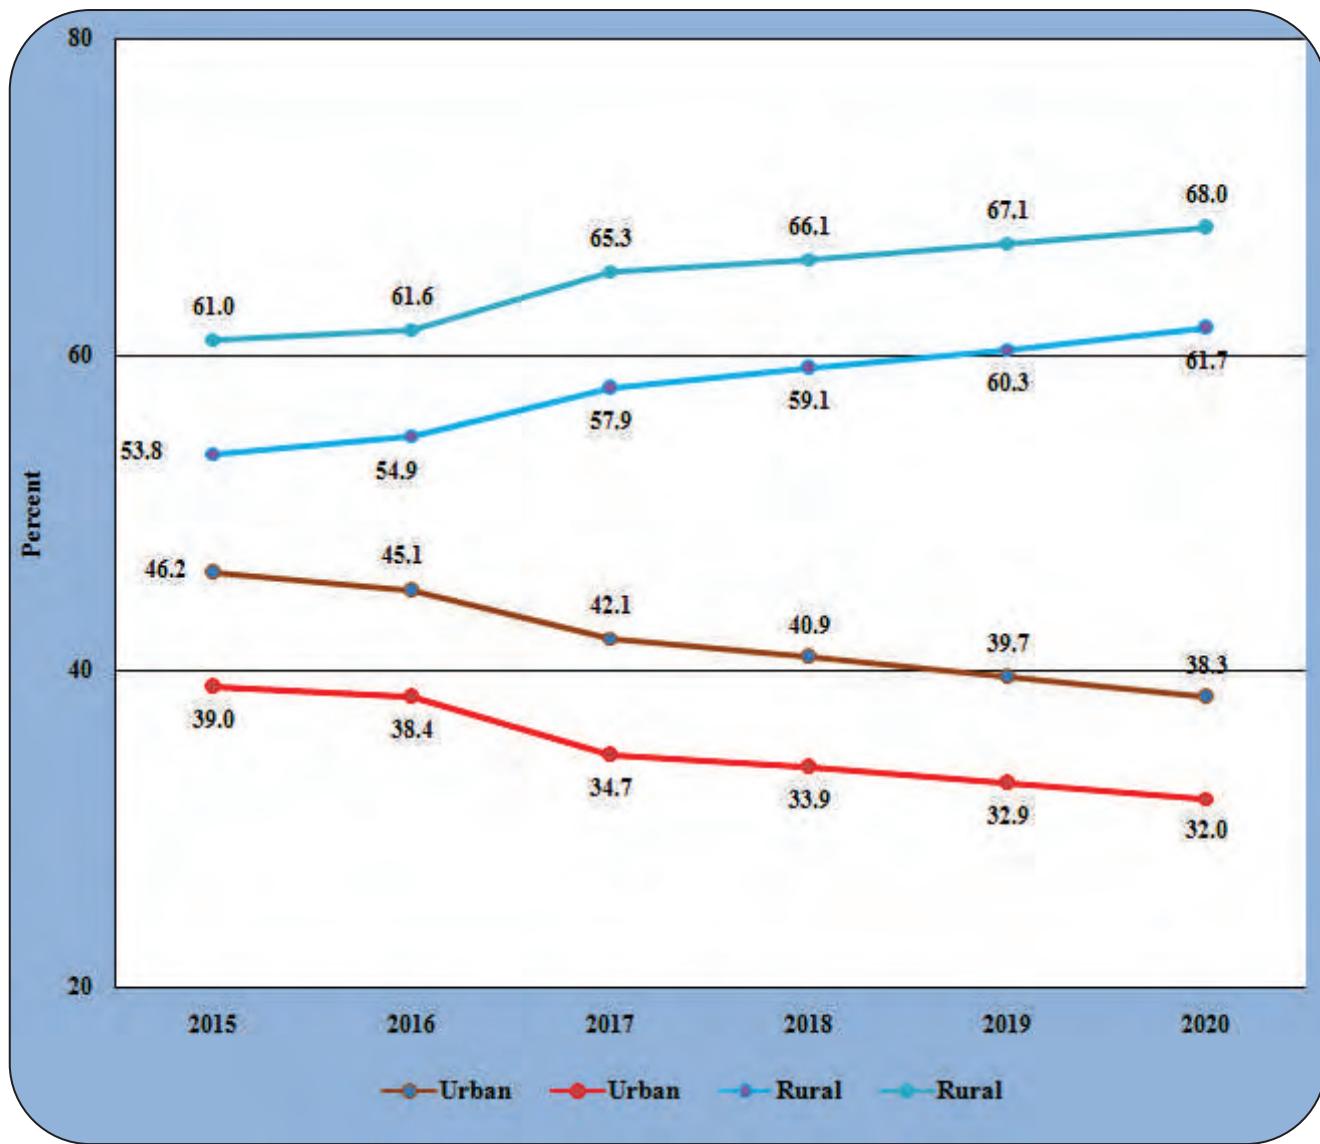

Year	Urban Area			Rural Area			All India		
	Accidents	Killed	Injured	Accidents	Killed	Injured	Accidents	Killed	Injured
2015	2,31,894 (46.25)	56,978 (38.99)	2,04,545 (40.89)	2,69,529 (53.75)	89,155 (61.01)	2,95,734 (59.11)	5,01,423	1,46,133	5,00,279
2016	2,16,813 (45.11)	57,840 (38.36)	2,12,346 (42.93)	2,63,839 (54.89)	92,945 (61.64)	2,82,278 (57.07)	4,80,652	1,50,785	4,94,624
2017	1,95,723 (42.1)	51,334 (34.71)	1,83,703 (39)	2,69,187 (57.9)	96,579 (65.29)	2,87,272 (61.000)	4,64,910	1,47,913	4,70,975
2018	1,90,956 (40.89)	51,379 (33.93)	1,76,785 (37.66)	2,76,088 (59.11)	1,00,038 (66.07)	2,92,633 (62.34)	4,67,044	1,51,417	4,69,418
2019	1,78,062 (39.66)	49715 (32.9)	1,66,608 (36.91)	2,70,940 (60.34)	1,01,398 (67.1)	2,84,753 (63.09)	4,49,002	1,51,113	4,51,361
2020	1,40,313 (38.32)	42,088 (31.95)	1,25,045 (35.90)	2,25,825 (61.68)	89,626 (68.05)	2,23,234 (64.10)	3,66,138	1,31,714	3,48,279

Note: Figures in parenthesis indicate the % share in total

- 8.3 The share of Urban Areas in number of accidents and persons killed has declined as compared to Rural Areas, whose share has increased over the period 2015 to 19 (chart 8.1) Urban areas shared 38.3 percent of accidents whereas

corresponding share of Rural area as at 61.7 per cent in 2020. Similarly, 32 percent of total fatality took place in Urban area and 68 percent of same in rural area.

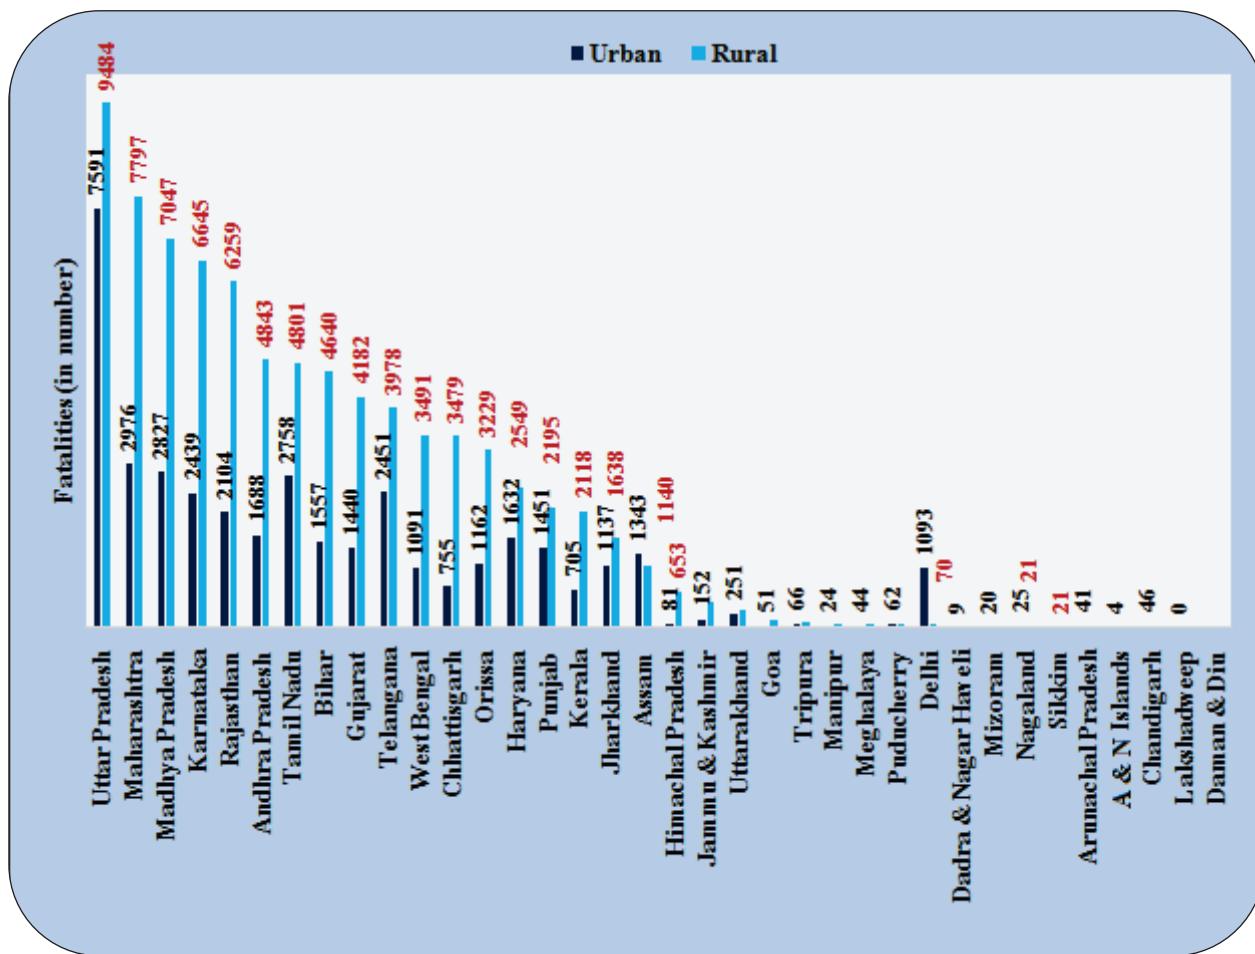

Chart 8.1: Trends of Accident and Persons Killed in Rural and Urban Areas

- 8.4 State wise distribution of fatalities during 2020 presented in the Chart 8.2 depicts less number of fatal accidents recorded in urban areas in all States except for Delhi and Assam. Uttar Pradesh topped the list with 9484 rural and 7591 urban fatalities followed by Maharashtra (7797 rural and

2976 urban fatalities) and Madhya Pradesh (7047 rural and 2827 urban fatalities). Top 10 States share about 72.4 percent of fatal road accidents (23% in rural and 49.4 % in urban area) during 2020. Details are given at **Annexure 40**.

Chart 8.2: State wise and Rural Urban wise distribution of fatal accidents during 2020

TRENDS IN MONTH-WISE DISTRIBUTION OF ROAD ACCIDENTS

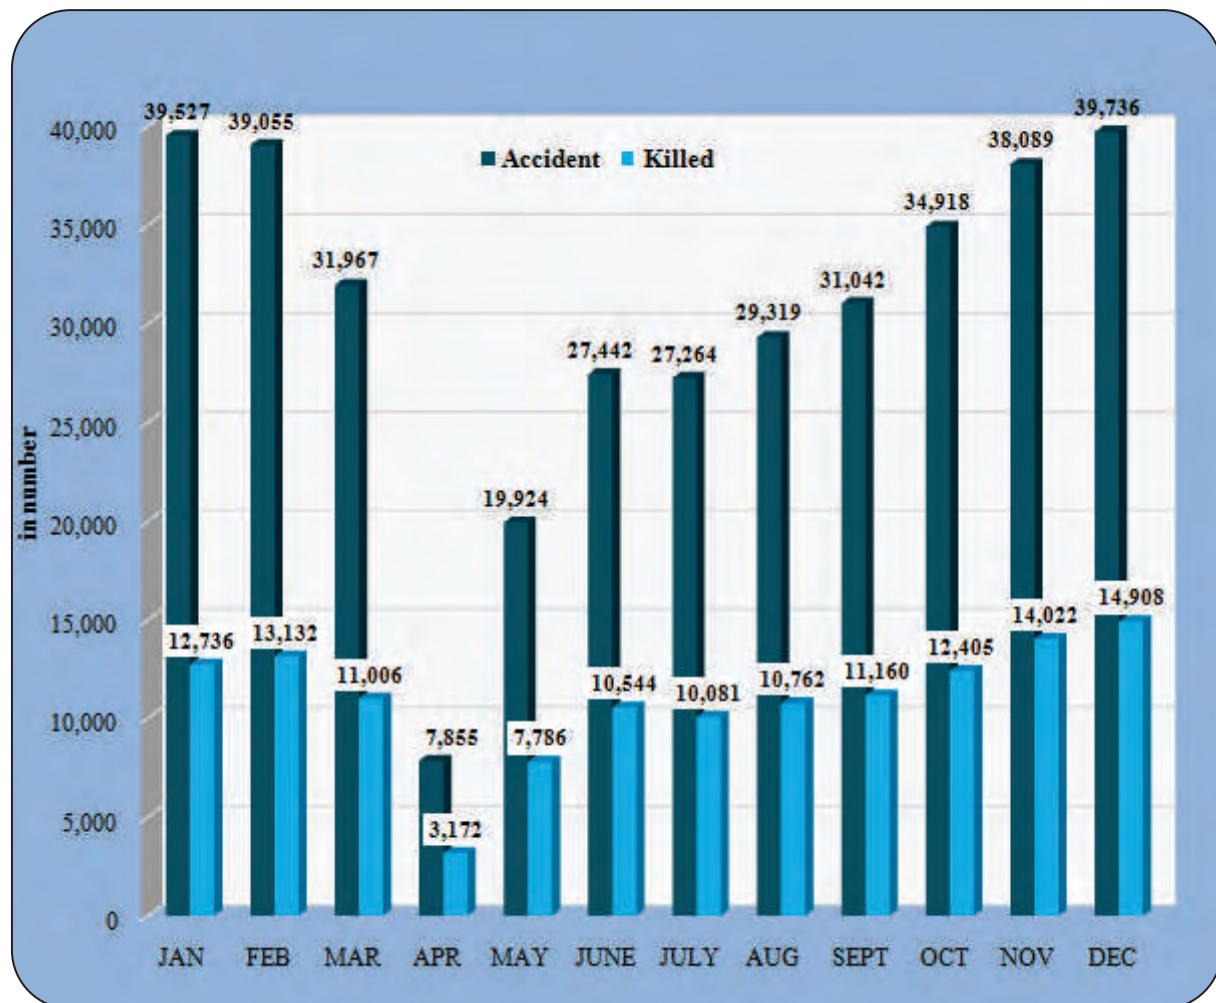

8.5. The month wise data on road accidents presented in Table 8.2 reveals during the last five years (2016 to 2020), the months which recorded maximum number of accidents and accident deaths were May, June, March, however, in 2020 these months reported comparably less number of accidents, which may be due to Nationwide lock down and subsequent restrictions imposed on movements. The month-wise distribution in Chart 8.2 depicts both road accidents and fatalities are comparably low during April to July and

then rises during August to December. Maximum number of accidents reported in the month of December followed by January, February and November (Chart 8.3). The peak month for road related deaths was in December followed by November, October and September. Except for two months of April and May, despite lockdown and restrictions on movement, the number of fatalities reported in 2020 follows the pattern similar with that of 2019. The state wise data are given at Annexure 41.

Table 8.2: Trends of month wise distribution of Road Accidents and Persons Killed during 2016-2020

Year	2016		2017		2018		2019		2020	
Month	Accident	Killed								
JAN	41,749	12,702	39,824	12,416	41,780	13,196	41,130	13,688	39,527	12,736

Chart 8.3 The month-wise distribution of number of Accidents and Fatalities during 2020

TRENDS IN TIME INTERVAL-WISE DISTRIBUTION OF ROAD ACCIDENTS

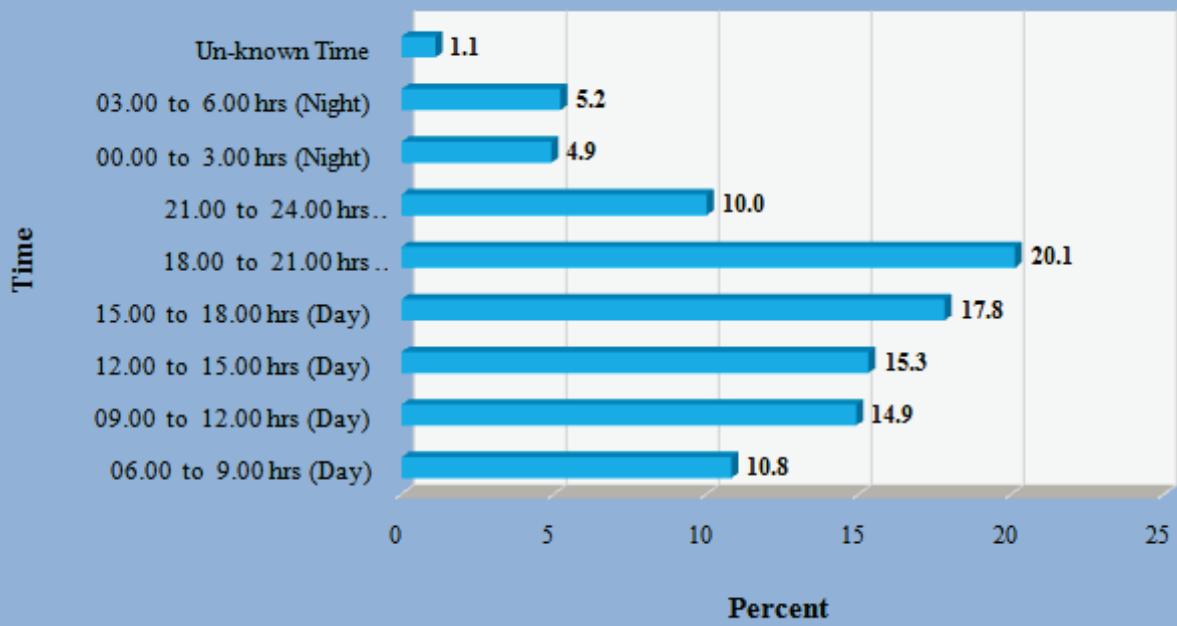

8.6 In 2020, the time interval between 18:00 - 21:00 hrs (Night) recorded maximum number of road accidents, accounting for 20.1 per cent of the total accidents in the country and this is in line with the pattern seen over the past five years (Table 8.3). The second highest time interval of a day was between 15:00 - 18:00 hrs (Day) constituting for 17.8 per cent of road

accidents. As per the data, afternoon and evening times are the most dangerous times to be on the road. The time interval of 0.00 hrs to 6:00 AM has the least number of accidents (Refer Table 8.3 and Chart 8.4). State-wise details of time interval-wise road accidents are given at **Annexure 42**.

Table 8.3: Number of Road Accidents by time interval of day during 2016-2020

Time	2016		2017		2018		2019		2020	
	Number of Accidents	% share in total accidents	Number of Accidents	% share in total accidents	Number of Accidents	% share in total accidents	Number of Accidents	% share in total accidents	Number of Accidents	% share in total accidents
06.00 to 9.00 hrs (Day)	54,522	11.3	51,551	11.1	51,489	11.0	49,165	10.3	39,435	10.8
09.00 to 12.00 hrs (Day)	75,771	15.8	71,426	15.4	70,211	15.0	66,767	14.9	54,496	14.9

Section - 9

ROAD ACCIDENT MITIGATION MEASURES TAKEN BY MINISTRY OF ROAD TRANSPORT & HIGHWAYS

9.1. India is committed to bring down fatalities from road accidents. The road accidents are multi-causal which requires multi-pronged measures to mitigate the problems through concerted efforts of all agencies of both Central Government and State Governments. Road Accident Measures which are within the purview of the Ministry of Road Transport & Highways include road engineering design for safety, proper road marking and signage's,

safety standards for vehicles like use of seat belts etc., education and awareness campaign and programmes. The Ministry has formulated a multi-pronged strategy to address the issue of road safety based on Education, Engineering (both of roads and vehicles), Enforcement and Emergency Care. The various accidents mitigation measures taken up by the Ministry of Road Transport & Highways in the recent Past are given below.

I. Education Measures:

Publicity and Awareness Campaigns

9.2. A Road Safety Week and Month has been observed at massive level across the entire NH network under NHAII through its field offices and the project teams of Concessionaire/Contractor and Independent Engineer / Authority Engineer across the country every year.

9.3. The officials of NHAII had undertaken various activities at toll plazas collectively with District Collectors, Police and Transport Department and also at some Toll Plazas various activities undertaken in presence of esteemed Public Representatives. The important activities carried out such as, distribution of hand bills/ pamphlets on traffic rules, display of road safety message through flex/banners,

conducting workshops/training on first aid and motivational programmes for road safety awareness among the school / college students, conducting Eye Check-up and Testing Camps for road users, publicity of Good Samaritan provisions for road users, awareness campaigns on over-speeding and helmet wear.

9.4. Road Safety Awareness Campaign - The Ministry of Road Transport & Highways, implements a scheme for undertaking publicity measures and awareness campaigns on road safety in order to educate road users through the electronic media, print media, NGOs and other organizations, etc.

II. Engineering (both roads and vehicles) Measures

Identification and Rectification of Accident Blackspots

9.5. High priority has been accorded for identification and rectification of blackspots (accidents prone spots on National Highways). Concerted efforts towards improvement of road safety through engineering measures on National Highways have been made. Ministry of Road Transport & Highways has identified 5803 blackspots on National Highways based on accident and fatality data of year 2015-2018 in 30 states/UTs. Ministry is taking following steps to rectify the blackspots;

- ✓ The blackspots are being rectified by providing immediate short term measures such as cautionary road signs and markings, transverse bar markings, rumble strips and solar blinkers etc.
- ✓ For long term rectification, measures such as Flyover, Underpasses, Foot over Bridges, Service roads etc. are being provided wherever required.
- ✓ Each blackspot location is inspected. NHAI has issued comprehensive guidelines on preparation of proposal, granting sanctions and execution of work for rectification of blackspots.
- ✓ Traffic calming measures such as traffic warning signs, delineators, road studs, bar markings, humps at approach roads, etc. are taken at vulnerable sections of National

Highways to reduce road accident fatalities.

- ✓ Emergency / medical facilities for the road accident victims are provided as per the respective contract / concession agreements signed between NHAI and the contractor/concessionaire.

Road Safety Audits

9.6. It is mandatory to carry out the Road Safety Audit of all highway projects at all stages i.e. design, construction and operation & maintenance stages. The Road Safety Audit is being carried out as per the applicable standards laid down by the Indian Road Congress (IRC)

Pedestrian Facilities

9.7. Financial power of up to Rs.25 crores for construction of Pedestrian Underpasses (PUP) and Pedestrian Subways (PSW) and up to Rs.1.25 crore for construction of Foot Over Bridges (FOBs) is delegated to Regional Officers of NHAI to speed up the process.

9.8. The FOBs, PUP and PSW are constructed to ensure reduction in accidents involving pedestrians. Up to December 2020, 194 FOBs have been completed, 95 FOBs are under construction and 209 FOBs have been included in upcoming projects under approval.

III. Training and Capacity building

- a. Capacity building on safety measures through training of NHAI field offices /Concessionaires / Contractors / Consultants engaged in NHAI project works throughout India.
- b. During the year 2019-2020 two days training programs were conducted by the Road Safety Expert Team for NHAI Field officers, Concessionaires, Consultants, Contractors, and IE/AE teams across the country. This training programs were attended by 450 trainees in fourteen training sessions conducted at different project sites.
- c. NHAI officers were also nominated for various training programs in India and abroad
- d. Accredited Driver Training Centre - Shortage of skilled drivers is one of the major issues in the Indian Roadways Sector. The Ministry of Road Transport and Highways has published a notification on 7th June, 2021, wherein the requirements to be fulfilled by accredited driver training centers have been mandated. The Centre shall be equipped with simulators and dedicated driving test track to provide high quality training to candidates. The candidates who successfully pass the test at these centers will be exempted from the driving test requirement at the time of applying for driving license, which is currently being taken at the RTO. These centres are allowed to provide industry- specific specialized training as well.
- e. Poor maintenance and use of old non-fitness-certified vehicles cause accidents and deaths. To mitigate this situation, Ministry of Road Transport and Highways is setting up model Inspection and Certification Centres in the States/UTs.
- f. To ensure good driving skills and knowledge of rules of road regulations among the drivers and to strengthen the system of driver licensing and training to improve the competence and capability of drivers, Ministry is setting up model Institutes of Driving Training and Research (IDTR) Centres, Regional Driving Training Centres (RDTCs) and Driving Training Centres (DTC) in the States/UTs.

IV. Speed Control

- 9.9. NHAI is taking several road engineering/ traffic calming measures to curb speed on minor roads / NHs as per the Codal Provision of IRC such as Rumble Strips,

Speed limit signs, Speed Breaker and associated signages, Flashing Amber Beacons etc.

V. Enforcement Measures

The Motor Vehicles Act

9.10. The Motor Vehicles Act, 1988 is the principal instrument through which road transport is regulated in the country. The same has been amended first time in a comprehensive way after thirty years by The Motor Vehicles (Amendment) Act,

2019, passed by the Parliament and published in the Gazette of India on 9th August 2019. The Act is expected to bring reforms in the various segments as delineated in the chart below and elaborated upon in the subsequent paras:

9.11. The Act will bring reforms in the area of Road Safety, bring citizen facilitation, transparency, and reduce corruption with the help of information technology and removing intermediaries. The Act will strengthen public transport, safeguard and protect Good Samaritan and reform the insurance and compensation regime. It will allow innovation and new

technologies such as driverless vehicles, to be tested in live environment and increase efficiency in research. The Act will facilitate Divyang by allowing motor vehicles to be converted to adapted vehicles with post-facto approval and facilitating license to drive adapted vehicles.

9.12. Some of the important Road Safety Provisions and Penalties are as under:

A. Strengthening Enforcement and Road Safety

- a. Stricter penalties to improve deterrence effect
- b. Minimum Penalty of Rs 500 as against present amount of Rs 100 for minor offences
- c. Stricter penalties for Juvenile offences
- d. Drunken driving -Penalty increased to Rs 10000 from present level of Rs 2000 and suspension of license
- e. Impounding and suspension of License in case of over speeding, dangerous driving, drunk driving, use of unsafe vehicles, not wearing helmets, use of mobiles etc.
- f. Recognizing the use of IT enabled enforcement equipment.
- g. Recognition of driver refreshing training course as a remedial measure in case of suspension of license.
- h. Mandatory automated testing for fitness certification.
- i. Constitution of National Road Safety Board to render advice on Road Safety and Traffic Management.

B. Speedy Assistance to Accident Victims

- a. Protection of Good Samaritans who help accident victims
- b. Heavy Penalties on those not giving way to Ambulances
- c. Cashless treatment during golden hour
- d. Faster and hassle-free provisions for

compensation of Rs 2.5 lacs for grievous hurt and Rs 5 lacs for death

- e. Enhanced compensation of Rs two lacs in case of death and fifty thousand for grievous hurt for victims of hit and run accidents
- f. Simplification of procedures for 3rd Party Insurance and hired Driver brought under the insurance cover.

C. Simplification and citizen facilitation

- a. Permitting issue of driving license anywhere in the State
- b. Facilitating grant of online learning license.
- c. Registration of new vehicles at the dealer's end including grant of registration number before the delivery of the vehicle is given.
- d. Renewal of transport license after five years as against present provision of three years.
- e. Documentation permissible in electronic form.
- f. Provision for recycling of vehicles
- g. Adapted vehicles for Divyang

D. Strengthening Public Transport

- a. Aggregators recognized as a legal entity
- b. Promote Rural Transport
- c. Promote Public Transport
- d. Promote last mile connectivity
- e. National and State Level Transportation plans

- f. States can formulate Schemes for promotion of public transport waiving the conditions in the Act.

E. Automation and Computerization

- a. Promoting use of electronic forms and documents.
- b. Migration from State registers of driving license and vehicle registration to National level database.

F. Empowerment of States

- a. Compound offenses at amounts equal to the penalty or higher amounts
- b. Impose a multiplier up to 10 to any penalty
- c. Exempt the requirement of Stage Carriage in interest of rural transport
- d. Exempt the requirements for promoting the last mile connectivity
- e. Can authorize any other person to exercise the powers
- f. Regulating pedestrians' movements and non-motorized traffic

VI. Enhancing Road Safety of Citizens

Protection of Good Samaritan

9.13. The Motor Vehicles (Amendment) Act, 2019 inserted a new section 134A, viz., "Protection of Good Samaritans". The rules provide that no police officer or any other person, shall compel a Good Samaritan to disclose the name, identity, address or any such other personal details: provided that the Good Samaritan may voluntarily choose to disclose his/her name.

Multiplier for traffic offence

9.14. The Motor Vehicles (Amendment) Act 2019 provides power to State Government to increase penalties. The State Governments can have a multiplier up to 10 times for the penalties for offences relating to Motor Vehicles.

Helmet

9.15. The Ministry has issued 'The Helmet for riders of Two Wheelers Motor Vehicles (Quality Control) Order, 2020'. This will enable only BIS certified helmets for two wheelers to be manufactured and sold in India.

Tyre Pressure Monitoring System

9.16. The Ministry has made amendments in CMVR 1989 for providing the specification for the Tyre pressure monitoring system (TPMS) for vehicles up to maximum mass of 3.5 Tonnes. The TPMS monitors the inflation pressure of the Tyre or its variation, while the vehicle is running, and transmits the information to the driver.

Safety norms for Construction Equipment Vehicles

9.17. The Ministry has issued notification for amendment in CMVR, 1989 to address the issue of safety of the operator while Construction Equipment Vehicles are running on public roads along with other vehicles.

Airbag

9.18. The Ministry has notified GSR 148(E) dated 2nd March 2021, regarding

mandatory provision of an airbag for the passenger seated on the front seat of a vehicle, next to the driver as an important safety feature.

Incident Management System & Incident Management Services

9.19. The services like ambulances, patrol vehicles, cranes are deployed at every toll plaza.

VII. Miscellaneous

Supreme Court Committee on Road Safety

9.20. Regular review meetings are being conducted by Supreme Court Committee on Road Safety, State Road Safety Committee and District Road Safety Committee. The NHAi, in coordination with field offices, ensures compliance of directions of the committee.

Instructions for removing Encroachment

9.21 Instructions have been issued to all Regional Offices, NHAi and Project Directors to ensure the National

Highways under their jurisdiction are free from encroachments, illegal parking of vehicles, contra flow of traffic etc. to enhance safety of road users.

Road Safety Advocacy Programme

9.22 Financial assistance is provided to the NGOs/Trusts/Co-operative Societies and other agencies for administering road safety programme to create awareness about road safety. Awards are also given to organizations for their outstanding work done in the field of road safety.

“Member of Parliaments’ Road Safety Committee”

9.23. The Ministry of Road Transport & Highways has notified “Member of Parliaments’ Road Safety Committee” in each district of the country to promote awareness amongst road users under the Chairmanship of Hon'ble Member of Parliament (Lok Sabha) from the district.

Section - 10

Note on Accident Data Collection Methodology followed by Transport Research Wing, Challenges and Way Forward

- 10.1. The WHO Report on Road Traffic Injuries for 2018 has listed Road accidents as the leading cause of death for the age group 5-29 years and a growing public health concern. To address this growing public health problem, there is a need for evidence based research and hence the focus on relevant and reliable data on accidents.
- 10.2. Transport Research Wing (TRW) under the Ministry of Road Transport and Highways collects Accident Data from the State Police Departments in standardized formats as provided by the UNESCAP under the Asia Pacific Road Accident Data(APRAD) base project. These formats were revisited by the Committee of Experts on Road Safety in 2017 comprising of Experts from IIT Delhi, IIT Kharagpur, DGPs of Police of Tamil Nadu & Tripura, representatives of WHO, Ministry of Health & Family Welfare, Secretary, Ministry of Road Transport & Highways and TRW. This issue also discussed in regional workshops conducted by various IITs in the country.
- 10.3. At present there are 21 formats (enclosed in **Appendix I**), including three additional formats added recently at the instance of the Supreme Court Committee.

Information in respect of different dimensions of accidents is sought from the Nodal Officers nominated by State DGPs for the purpose of accident data collection. Most of the nodal officers nominated are at fairly senior levels. Thus what needs to be noted is that the information on accidents is collected in standardized formats, which are internationally acceptable and are obtained from fairly responsible levels in the Police Departments. A brief note on the explanation of the terms used in this report are placed at Appendix II.

- 10.4. These 21 formats cover the following aspects of an accident;
- a) Accident Identification Details
 - b) Road Related Details including related jurisdiction.
 - c) Details of the Vehicles Involved in Accident.
 - d) Drivers Details.
 - e) Persons other than drivers involved in Accident.
- 10.5. All such data is normally called out from the States in the beginning of each calendar year and full information on the same is generally received by June end /early July every year. The data received from State Governments is then

aggregated based on the soft versions received and the Report brought out. It is the endeavour of TRW to bring out the Accident Report by September/October every year.

10.6 Until last year, data was called for annually from the State Governments. We have now started calling for monthly data from States to enable us to study the impact of policy changes introduced by the Ministry such as the MVA 2019 etc. However, the system of monthly data is yet to stabilize as the data collection machinery in the State has been affected because of the COVID- 19 pandemic.

10.7. Amongst the various challenges faced by TRW are the non-receipt of information in a timely manner from the States, need for capacity building in the police stations to understand the formats and to fill them up correctly. Workshops for capacity building of the police personnel are required for this purpose which are undertaken by Ministry of Road transport & Highways from time to time.

10.8. Separately, in order to bring out the report in a timely fashion, TRW is in the process of developing a software with the help of NIC at the national level wherein the States would key in the required information and there would be automatic report generation at the national level. While the software is ready, it is yet to be tested.

10.9 The challenge faced in designing this software by NIC is the manner in which accidents data is collected in States varies and while there are some States which have very advanced software for this purpose, there are others where the process is done manually.

10.10 The upshot of the foregoing is that accident data at present is sourced from the Police Departments in India. The Police is the first responder in accidents and is considered to be the best source of data even though there are other sources like Hospitals and State Transport Departments. Even internationally, as per WHO's Global Status Report, almost 50% of the Reporting countries sourced their data from police with 7% sourcing from Health Departments and another 11% sourcing the same from Transport Departments.

10.11 Amongst the critique of the existing system of collecting road accident data are as below:

(i) There is a variation in respect of accident data reported by the Police/Hospitals and the Transport Departments at the District/State and National level and consequently there is a need to integrate and link the above accident data bases. This is also in line with the current thinking that there is a need for a “Systemic solution” to be found for road safety, requiring simultaneous and

- coordinated action by all stakeholders like Police, Health, Hospitals, Blood Banks, Trauma Care, Transport Department, Insurance etc. This systemic solution gained currency in the 90's when some Nordic countries, found it to be an effective solution helping them to successfully reduce their accidents and fatalities
- (ii) There is a possible under reporting of fatalities in police reported data because the deaths that take place in hospitals after 30 days will not get reported if the police and hospital data are not linked. Also because under IPC, any crime or offence has to be lodged against a human being and there cannot be any charge against a road, vehicle or any other object and hence fatalities in which the human being causing the accident cannot be identified may go unreported.
 - (iii) That the data collected by Police is not evidence based as the policeman who goes to the spot would normally record the data after returning depending on his memory.
 - (iv) That the accident data recorded is not dynamic and does not get updated on a real time basis.
 - (v) That the data reported by the Police is often limited to the questions asked in TRW formats.
 - (vi) That the data collected by Police is often affected by the value judgement and biases of the policeman.

(vii) That the data collected often does not provide inputs on the real time condition of the road to enable the road engineers to take the maintenance work.

10.12. It is to address the above criticisms that Ministry of Road Transport & Highways (MoRTH) has formulated the Integrated Road Accidents (IRAD) Project under World Bank Assistance. Technical support for the project is being rendered by IIT Madras and NCSI. In the first phase, IRAD is to be implemented in 6 States namely Tamil Nadu, Rajasthan, Karnataka, Madhya Pradesh, Bihar and Uttar Pradesh.

10.13. Basically, the IRAD project involves capture of road accidents and geotagging of the same through a tablet provided to the first responder which is the police. The software of the project would provide back end analytics, as well as simultaneous linkage with multiple users (as in Hospitals, Ambulance, Blood Banks, Vahan, Sarathi, NHAI, PWD, Courts, Insurance Companies etc.), near real time syncing and updation of data base as well as development of a mobile application for Road Accidents. The project is expected to be launched shortly and is in line with the systemic solutions on accident collection in place internationally.

International experience in collection of accident data:

10.14. A study of the framework for accident data collection internationally is summarized in the table 10.1 below:

Table 10.1: Framework for accident data collection internationally

Country wise	EU	US	Australia	New Zealand	Italy	Korea	Sweden
Agency for Road Accident Data Collection	Available since 1991 in Community Road Accident Database (CARE) – as collected by Member States is not always compatible.	<p>Various Accident Reporting Data Systems in US:</p> <ul style="list-style-type: none"> • Fatality Analysis Reporting System (FARS) was created by National Highway Traffic Safety Administration (NHTSA) in USA in 1975, and is maintained by National Center for Statistics and Analysis (NCSA). It provides data about fatal crashes involving all types of vehicles. • IRTAD (International Road Traffic and Accident Database) <p>IRTAD brings out an annual report on overview of road safety performance in 32 member and observer countries. Most of IRTAD data can be found in IRTAD's Road Safety Annual Reports. Online access to the full IRTAD database is available for subscribers via the OECD statistics portal:</p> <ul style="list-style-type: none"> • The U.S. Census Bureau • The Highway Safety Information System (HSIS) 	<p>Each Australian State and Territory has a separate crash analysis system.</p> <p>Nat level data Published by the Bureau of Infrastructure, Transport and Regional Economics. The Australian Road Deaths Database (ARDD) is maintained and published by BITRE (Bureau of Infrastructure, Transport and Regional Economics). It commenced in 1989 and is updated on a monthly basis.</p>	<p>NZ Transport Agency.</p> <p>(Road Features & Traffic data from RAMM database)</p>	<p>National Institute of Statistics (ISTAT) and contains only information on injury crashes. The national database is based on information collected on the scene by Highway Police, Local Police, Police, and Carabinieri (an army corp</p>	<p>Korea Road Traffic Authority</p> <p>Traffic Authority</p>	<p>Swedish Traffic Accident Data Acquisition (STRADA)</p> <p>STRADA (Swedish Traffic Accident Data Acquisition) is a national information system containing data on traffic accidents and injuries occurring in the Swedish road transport system. The information comes from the police and the medical care services.</p>

table 10.1 *continued...*

Country wise	EU	US	Australia	New Zealand	Italy	Korea	Sweden
Variables Studied	73 variables and 471 values	100 variables Integrated data- The data collected within FARS do not include any personal identifying information, such as names, addresses, or social security numbers. Thus, any data kept in FARS data fully conforms to the Privacy Act.			Contains 189 variables. Access to the database is restricted	TAAS studies 35 different coded elements	
Systemic Analysis			Access to detailed Police crash reports is restricted to varying degree of hospital and ambulance data linked to the police reports in all of the jurisdictions, due to privacy reasons	Data base of Police, Insurance Companies & mutual aid associations is Integrated.	The data in STRADA is integrated across police and hospitals. By combining data from two sources, it is possible to get better data especially of pedestrians, cyclists and moped drivers which is maintained by hospitals but not by police provided.		
				GIS based analysis; collision diagrams, access to original police reports	The national crash database is not linked to road and traffic database, which do not exist even though they are required by the Road Code issued in 1992.	TAAS consists of Input Management System, a Statistical Analysis System, a Spatial Analysis System, and a Web-service System	
System components		An electronic data file is used by data analyst to interpret and code data. Annual FARS data files are available for 1975 through 2016.	Need for integrating the various systems.				

10.15 A review of these International best practices (EU, USA, Sweden, Australia, New Zealand, Italy and South Korea) shows the following:

- a. Traffic crash data recording has traditionally been the responsibility of the police in all countries.
- b. Recognizing the limitations of data collected by police, many countries have established specialised institutions for creating reliable traffic safety database which can be used by policy makers at different levels.
- c. Usually a standardised format has been recommended in most countries. However, the level of details and accuracy of recording crash details varies in different countries with different number of variables reported upon.
- d. Most countries have linked police data with other data sources. However, the degree of integration varies across countries.

ANNEXURES

Road Accidents, Persons Killed and Injured: 1970-2020

Years	Total Number of Road Accidents (in numbers)	Total Number of Persons Killed (in numbers)	Total Number of Persons Injured (in numbers)	Population of India (in thousands)	Total Number of Registered Motor Vehicles (in thousands)	Road Length (in kms)	Number of Accidents per Lakh Population	Number of Accidents per Ten Thousand Vehicles	Number of Accidents per Ten Thousand Kms of Roads	Number of Persons Killed per Lakh Population	Number of Persons Killed per Ten Thousand Vehicles	Number of Persons Killed per Ten Thousand Kms of Roads	Number of Persons Injured per Lakh Population	Number of Persons Injured per Ten Thousand Vehicles	Number of Persons Injured per Ten Thousand Kms of Roads

NR: Not Reported

Total may not tally due to non reported data from Himachal Pradesh

Disparity of total figures from 9459 of Format 4 to 1648(70+15648) in Format 20 is due to the repeated entry of road users in Column No.1 to 9 ie,one or more type of vehicles or road users in same accident had included in different rows as per Format 20.

State -wise data of accidents & fatalities classified according to type of traffic violation on National Highways under different categories during the year 2020

Appendix - II

Explanation of terms used in the Report:

Accident Type	Definition
Fatal Accident	A fatal accident is one in which one or more persons are killed as a result of the accident, provided death occurs within 30 days.
Serious Injury Accident	A serious injury accident is defined as either for which a person is detained in hospital as an “ in patient ” or if any one of the following injuries are sustained whether or not he or she is detained in the hospital:- fractures, concussions, internal injuries, crushing, severe cuts and lacerations or severe general shock requiring medical treatment and victim require ICU admission .
Major Injury Accident	A major injury accident is defined as either for which a person is detained in hospital as an “ in patient ”, or if any one of the following injuries are sustained whether or not he or she is detained in the hospital:- fractures, concussions, internal injuries, crushing, severe cuts and lacerations or severe general shock requiring medical treatment but does not require ICU admission .
Grievous Injury Accident	Includes both Serious injury accident and Major injury accident defined above.
Minor Injury Accident	Minor accident is one in which there are no deaths or serious injuries but a person is slightly injured. This will be an injury of minor nature such as a cut, sprain or bruise, where only first aid is required and does not require hospitalisation .
No Injury Accident (Damage only Accident)	One in which no one is injured but damage to vehicle and/or property sustains.
Road Accident Risk	Number of Accidents per Lakh Population
Road Accident Death Risk:	Number of Persons Killed per Lakh Population
Road Accident Rate	Number of Accidents Per Ten Thousand Vehicles
Road Accident death rate	Number of Persons killed Per Ten Thousand Vehicles
Vehicle Density	Number of Vehicles per Km of Road
Pedestrian	Any person other than a driver or passenger. Persons in or operating pedestrian conveyance such as perambulator, invalid chair without engine, push cart etc or pulling a cycle are Pedestrians. Persons attending to a vehicle (e.g for change or tyre, repairing engine etc) moving on roller skates, etc are also pedestrians..
Type of Collision	
Run off road	This is a type of road traffic collision in which only one vehicle is involved. Contributing factors include such as loss of control or mis-judging a curve, or attempting to avoid colliding with another road user or an animal
Head on collision	where the front ends of two vehicles hit each other in opposite directions
